

1. Size Guide

1.1 Installation and activation

Installation via Administration Panel

When Size Guide files are downloaded from your CodeCanyon account. You can start installation using WordPress administration panel.

Once you've logged into your administration panel go to *Plugins > Add New*

Then:

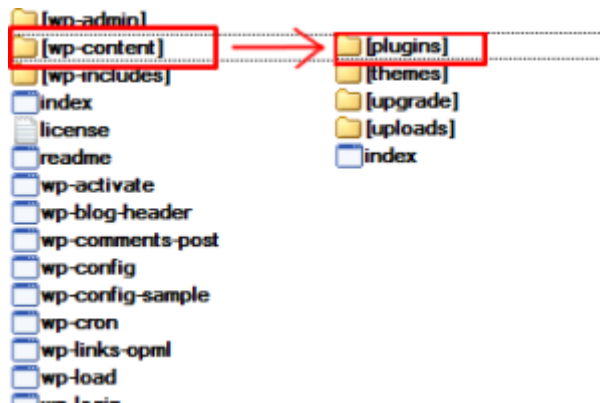

Chose *Upload* (1), click *Select a file* (2), ct-size-guide.zip from your hard drive and click *Install Now* (3)

Installation via FTP

To install Size Guide via FTP follow step below:

- **Step 1** – Unarchive ct-size-guide.zip file
- **Step 2** – Access your host web server using FTP client

- **Step 3** – Find directory *wp-content > plugins*
- **Step 4** – Put folder *ct-size-guide.zip* in directory *wp-content > plugins*

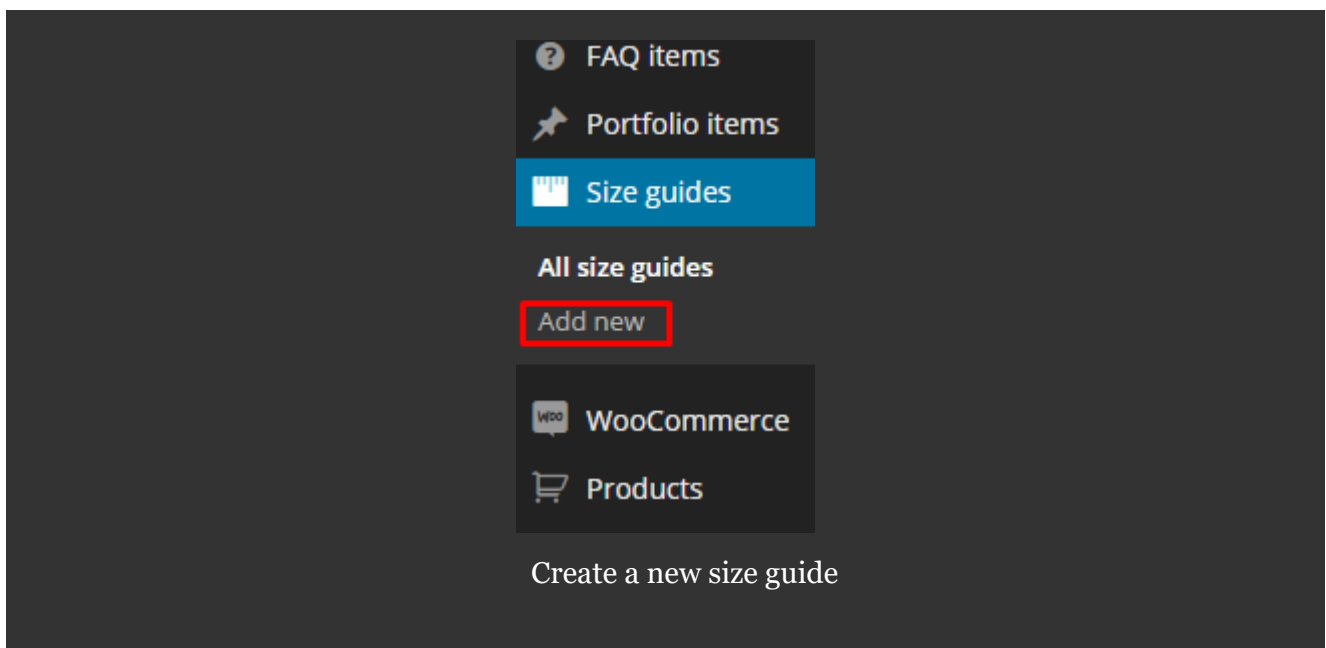

1.2 Creating a size guide

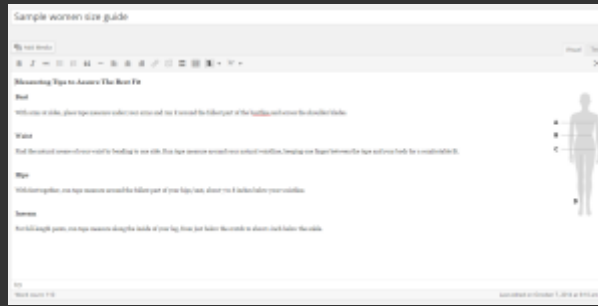

Please note that upon plugin activation there are two sample size guides created, for a quick start you can just edit them!

To create a new size guide:

Go to Size guides > Add new in your WordPress Admin Panel

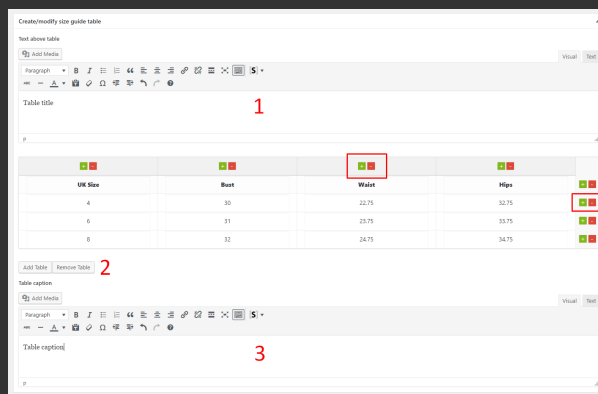

Insert a title and content

Fill size guide content

Title will be the name of the size guide. In the content, you can for example describe how a customer can measure its sizes properly.

Fill the size guide

Fill the size guide table content

In the sections 1 and 3 you can specify a table header and a caption.

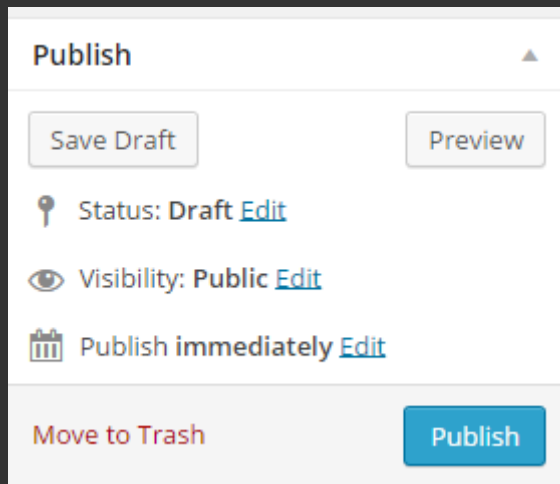

To add/remove columns and rows just use the plus/minus buttons (inside red squares on the screenshot). Right, it's as simple as that!

Fill table cells by just clicking on them and inputting the text.

Everytime you create a size guide there is a basic 4×4 table attached to make your work easier.

If you wish to add or remove added extra table use the Add Table or the Remove Table button (2)

Publish it and go to the next section

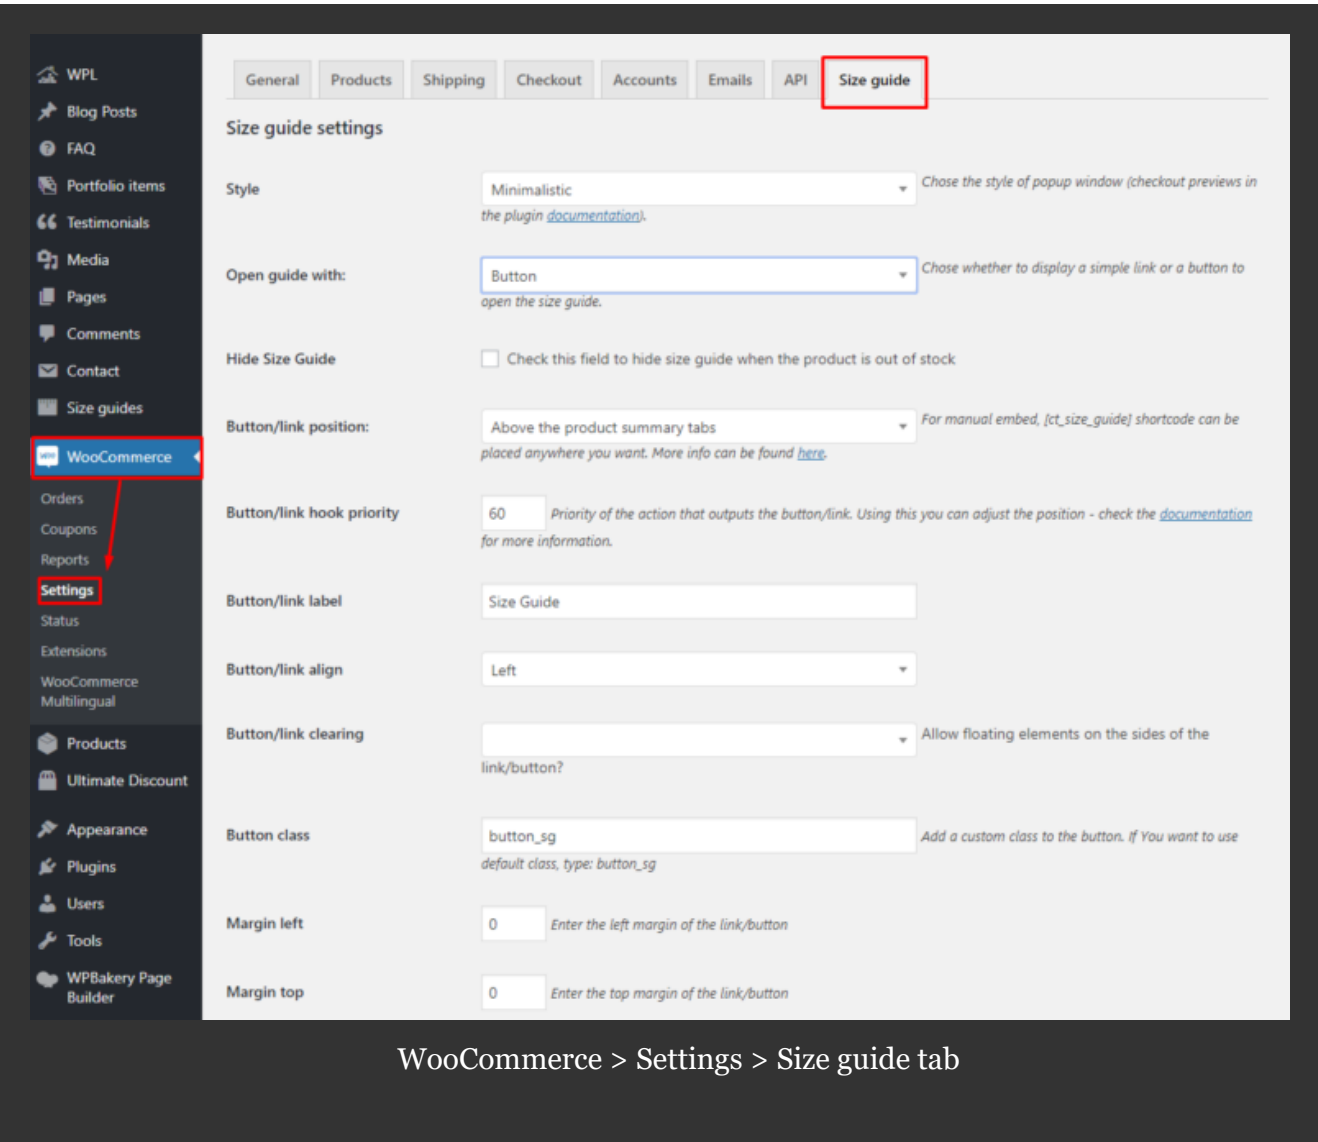

Publish the size guide

1.3 Size guide settings

On every created Size Guide you can either use the global settings or adjust them separately.

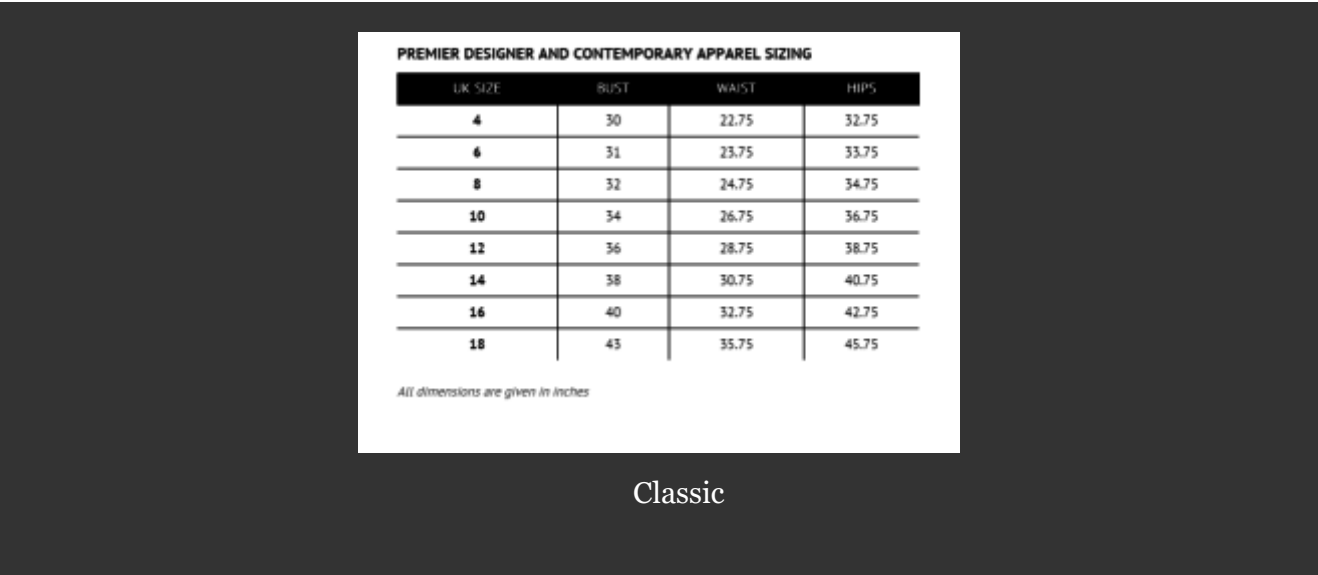

Go to WooCommerce > Settings > Size guide tab

Options to choose from:

Style

You can choose one of the existing styles or create a new one (details in *Creating a style* section):

Premier Designer And Contemporary Apparel Sizing

UK Size	Bust	Waist	Hips
4	30	22.75	32.75
6	31	23.75	33.75
8	32	24.75	34.75
10	34	26.75	36.75
12	36	28.75	38.75
14	38	30.75	40.75
16	40	32.75	42.75
18	43	35.75	45.75

All dimensions are given in inches

Minimalistic**Premier Designer And Contemporary Apparel Sizing**

UK Size	Bust	Waist	Hips
4	30	22.75	32.75
6	31	23.75	33.75
8	32	24.75	34.75
10	34	26.75	36.75
12	36	28.75	38.75
14	38	30.75	40.75
16	40	32.75	42.75
18	43	35.75	45.75

All dimensions are given in inches

Modern**Hide Size Guide**

Check this field to hide size guide when the product is out of stock.
Size guide will be displayed if you allow backorders in products settings.

Open guide with

Choose whether to display a simple link or a button to open the size guide.

Button/link position

You can display it either above the product summary tabs (Description, Reviews etc.), after the ‘add to cart’ button, as a tab or use the `[ct_size_guide]` shortcode on the Single Product page.

Button/link hook priority

Priority of the action that outputs the button/link. Priority is *“Used to specify the order in which the functions associated with a particular action are executed. Lower numbers correspond to earlier execution, and functions with the same priority are executed in the order in which they were added to the action.”*

If you choose to display the Size Guide above the product summary tabs or after the ‘add to cart’ button this might help you change the position. The final outcome might depend on other plugins and theme features that use the given hooks. ‘woocommerce_after_add_to_cart_button’ hook is not used often, but the ‘woocommerce_single_product_summary’ is commonly used. The basic actions hooked in (almost) every WooCommerce theme are:

```
woocommerce_template_single_title – 5
woocommerce_template_single_price – 10
woocommerce_template_single_excerpt – 20
woocommerce_template_single_add_to_cart – 30
woocommerce_template_single_meta – 40
woocommerce_template_single_sharing – 50
```

where the numbers mean the priority. The lower the digit is, the earlier the action will be executed. For example, if you display the Size Guide above the product summary tabs, you can display it right under the title by setting the priority to 7 (or anywhere between 5 and 10) or after the price by setting it to 15 and so on.

Button/link label

Enter the text to be displayed in the link/button. Default: *Size Guide*.

Button/link align

Choose if the button should be aligned left or right.

Button/link clearing

Allow or disallow floating elements on the sides of the link/button.

More advanced users: if set to no, this option will add a ‘clearfix’ after the button/link.

Button class

You can add any custom class to the button.

Margins

Set the margins on the sides of the link/button.

Popup overlay color

Set the color of the background behind the Size Guide popup window.

Paddings

Set the paddings inside the Size Guide popup window.

Table hover

Option to enable hover effect on the Size Guide table.

Background for hover line

The BG color of the rows and columns of the cell you are hovering.

Background for hover active cell on hover

The BG color of the cell you are hovering.

Responsive tables

Option to enable/disable the responsive view of the table in the Size Guide.

Size Guide Sample with Hover

2. Using Product CSV Import Suite

Please remember that Product CSV Import Suite isn't part of the **Size Guide for Woocommerce** plugin. If you wish to use this feature you need to buy it first.

After updating the plugin to version 2.1 WooCommerce Product Size Guide is compatible with [Product CSV Import Suite](#)

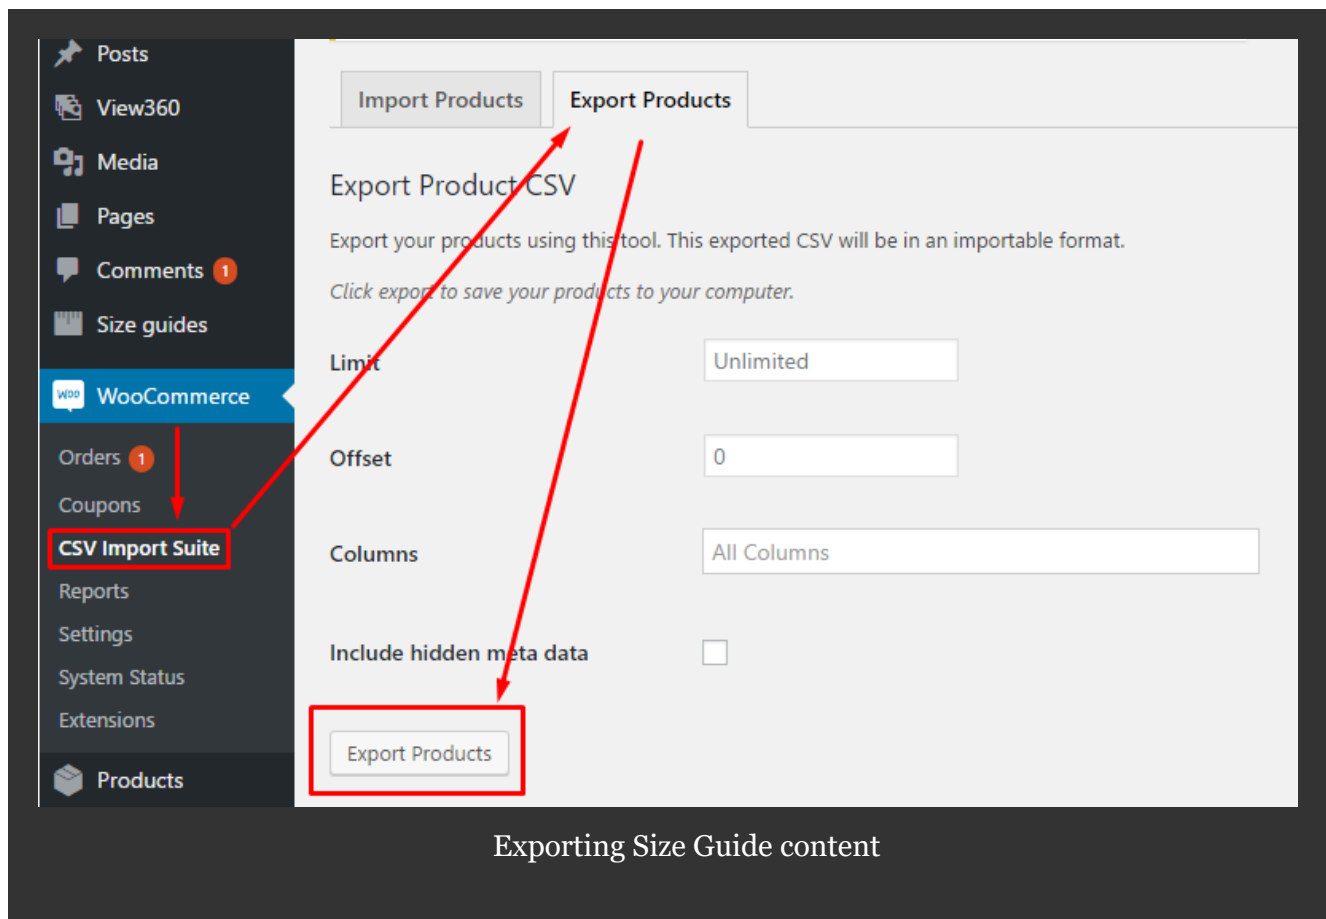

Using CSV you will be able to export the content of your size guide items and then open them using office software like Open Office or Microsoft Excel.

After opening the file you will be able to change the content of imported tables by (for example) attaching products to new categories.

Below you can check step-by-step instruction how to use this new feature from exporting product Size guide tables to importing them after adding your custom changes.

DOWNLOADING PRODUCT FILE

1. Go to *WooCommerce > CSV Import Suite* and in **Export Products** tab choose Export Products – this way you will get .csv file with all of the product information.

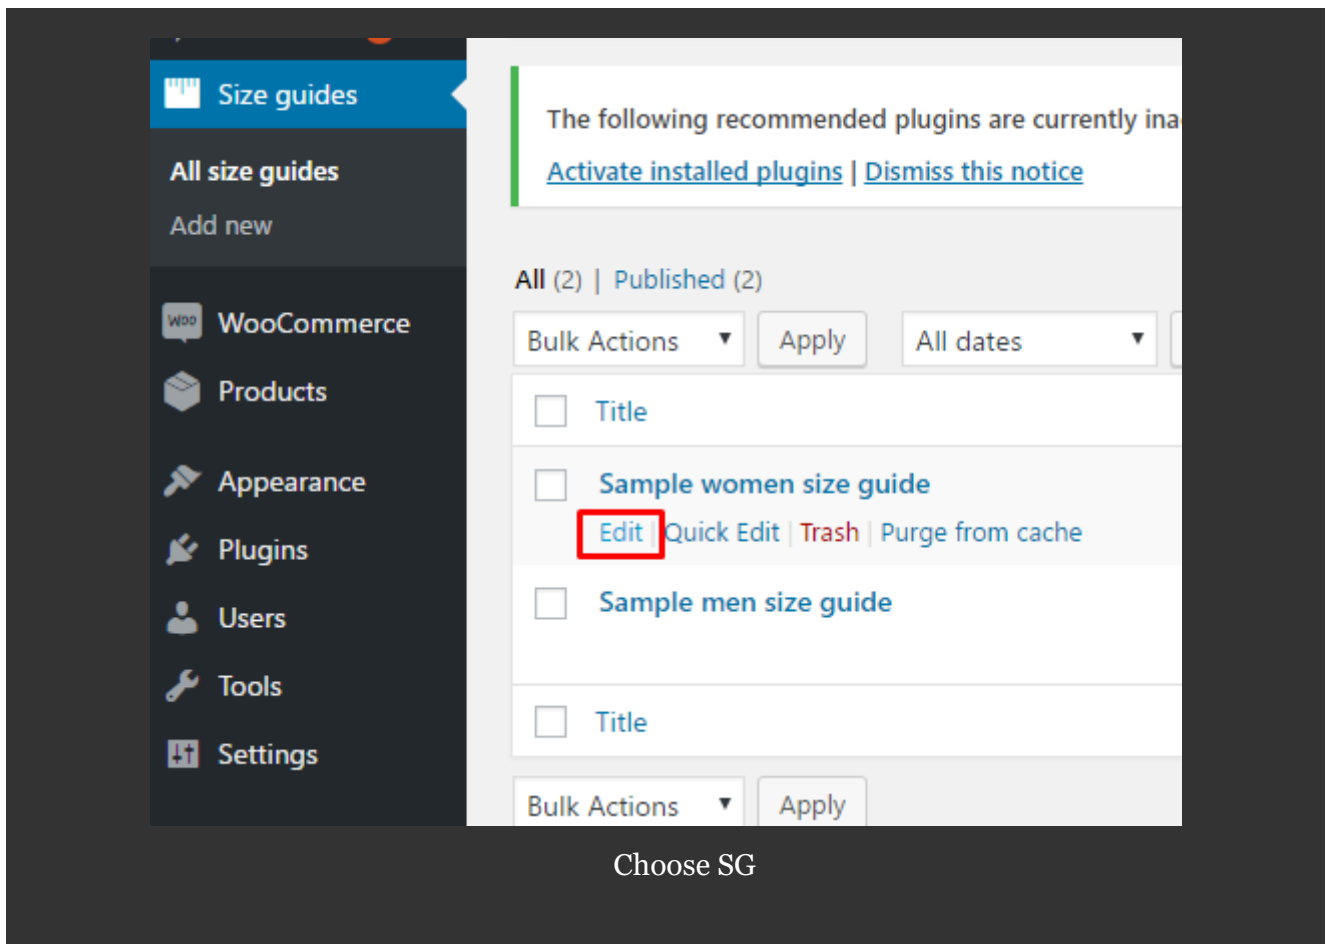

The screenshot displays the WooCommerce dashboard sidebar on the left, with the 'CSV Import Suite' menu item highlighted. The main content area shows the 'Export Product CSV' interface. At the top, there are two tabs: 'Import Products' and 'Export Products', with the latter being active. Below the tabs, the text reads: 'Export Product CSV', 'Export your products using this tool. This exported CSV will be in an importable format.', and 'Click export to save your products to your computer.' There are three input fields: 'Limit' set to 'Unlimited', 'Offset' set to '0', and 'Columns' set to 'All Columns'. Below these is a checkbox for 'Include hidden meta data' which is currently unchecked. At the bottom, there is a button labeled 'Export Products' which is highlighted with a red box. Two red arrows point from the 'CSV Import Suite' menu item in the sidebar to the 'Export Products' button and the 'Export Products' tab.

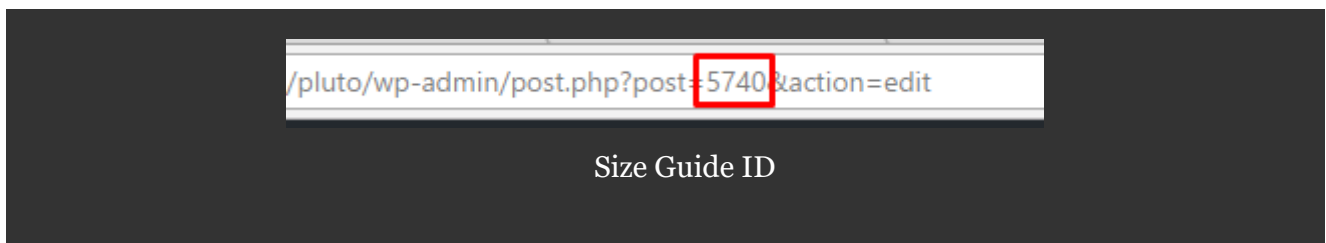

Exporting Size Guide content

- [illegible]

To add size guide to product you need to get the Size Guide ID to do that please:

2. In the SizeGuide slug you will find a number – this is the ID we are looking for!

3. Go back to the downloaded file and add the ID to the product you want to use this Size Guide and save the changes in the file.

meta:	ct	selectsizeguide
		5740
		5741
		5740
		5741
		5741
		5740
		5740

Adding new ID

IMPORT CHANGES

1. The last step is Importing the files with your changes – Go to *WooCommerce > CSV Import Suite* and in **Import Products** tab choose Import Products
2. Choose the option *Choose File* and add the file with your changes

Hi there! Upload a CSV file containing product data to import the contents into your shop.

Choose a CSV (.csv) file to upload, then click Upload file and import.

Choose a file from your computer:

Choose File woocommerce...rt (6).csv Maximum size: 1 MB

Add your csv file

OR enter path to file: /var/www/ct5/wp/

Delimiter

Merge empty cells ☐ Check this box to merge empty cells - otherwise (when merging) the empty cells will be imported as is

Upload file and import *when the file is added click this button*

Adding the file

3. Hit the Upload file and import button and it is done!

3. Translating Size Guide to Different Languages using WPML Plugin

To use this option, you need to have installed (WordPress Multilingual Plugin) WPML plugin, which you can buy [here](#).

This plugin isn't part of the *Size Guide* bundle, to use this function you must have the WPML plugin.

Translating Text Content

To be able to fully integrate the translation functionality of WPML plugin:

- Once you have installed the WPML plugin, go to *WPML > Translation Management*. Choose the **Multilingual Content Setup** tab and click on ***Use the translation editor*** radio button then save.

The screenshot shows the WPML 'Multilingual Content Setup' tab. The left sidebar contains a menu with 'WPML' highlighted, and 'Translation Management' is shown as a sub-option. The main content area has a header 'Translation management' and a sub-header 'WooCommerce Multilingual is enabled but not effective. It requires [WPML String Translation](#) in order to work.' Below this are tabs for 'Translation Dashboard', 'Translators', 'Translation Jobs', 'Multilingual Content Setup' (which is active and highlighted with a red box), and 'Translation Notifications'. The 'Multilingual Content Setup' tab contains several sections: 'How to translate posts and pages' with radio buttons for 'Create translations manually' and 'Use the translation editor' (the latter is selected and highlighted with a red box), and checkboxes for 'Don't include already translated terms in the translation editor' and 'Show translation instructions in the list of pages'. There is also a 'Save' button. Below this is the 'Posts and pages synchronization' section with checkboxes for 'Synchronize page order for translations', 'Set page parent for translation according to page parent of the original language', and 'Synchronize page template'.

Multilingual Content Setup tab

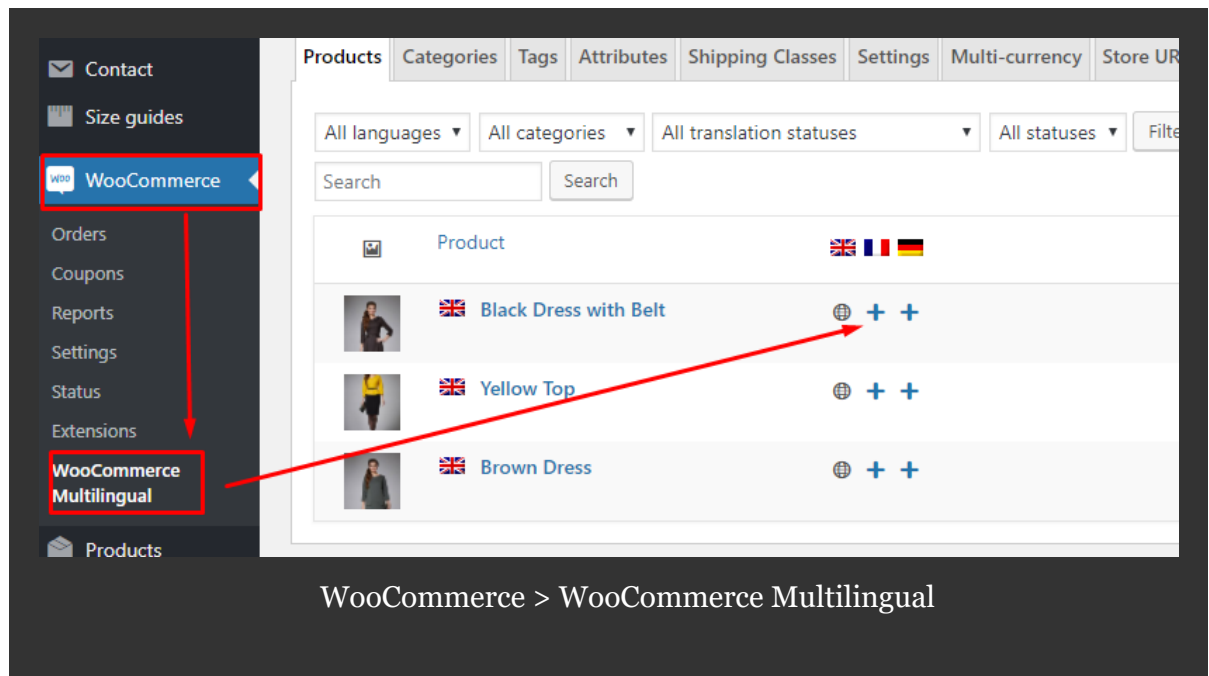

- Scroll down and look for *Custom Fields Translation*. Click *Show system fields* to show all available fields.
- Look for the Size Guide custom field. Then click the *Translate* radio button beside the custom field.

Custom fields	Don't translate	Copy	Copy once	Translate
_billing_first_name	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

_download_permissions_granted	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

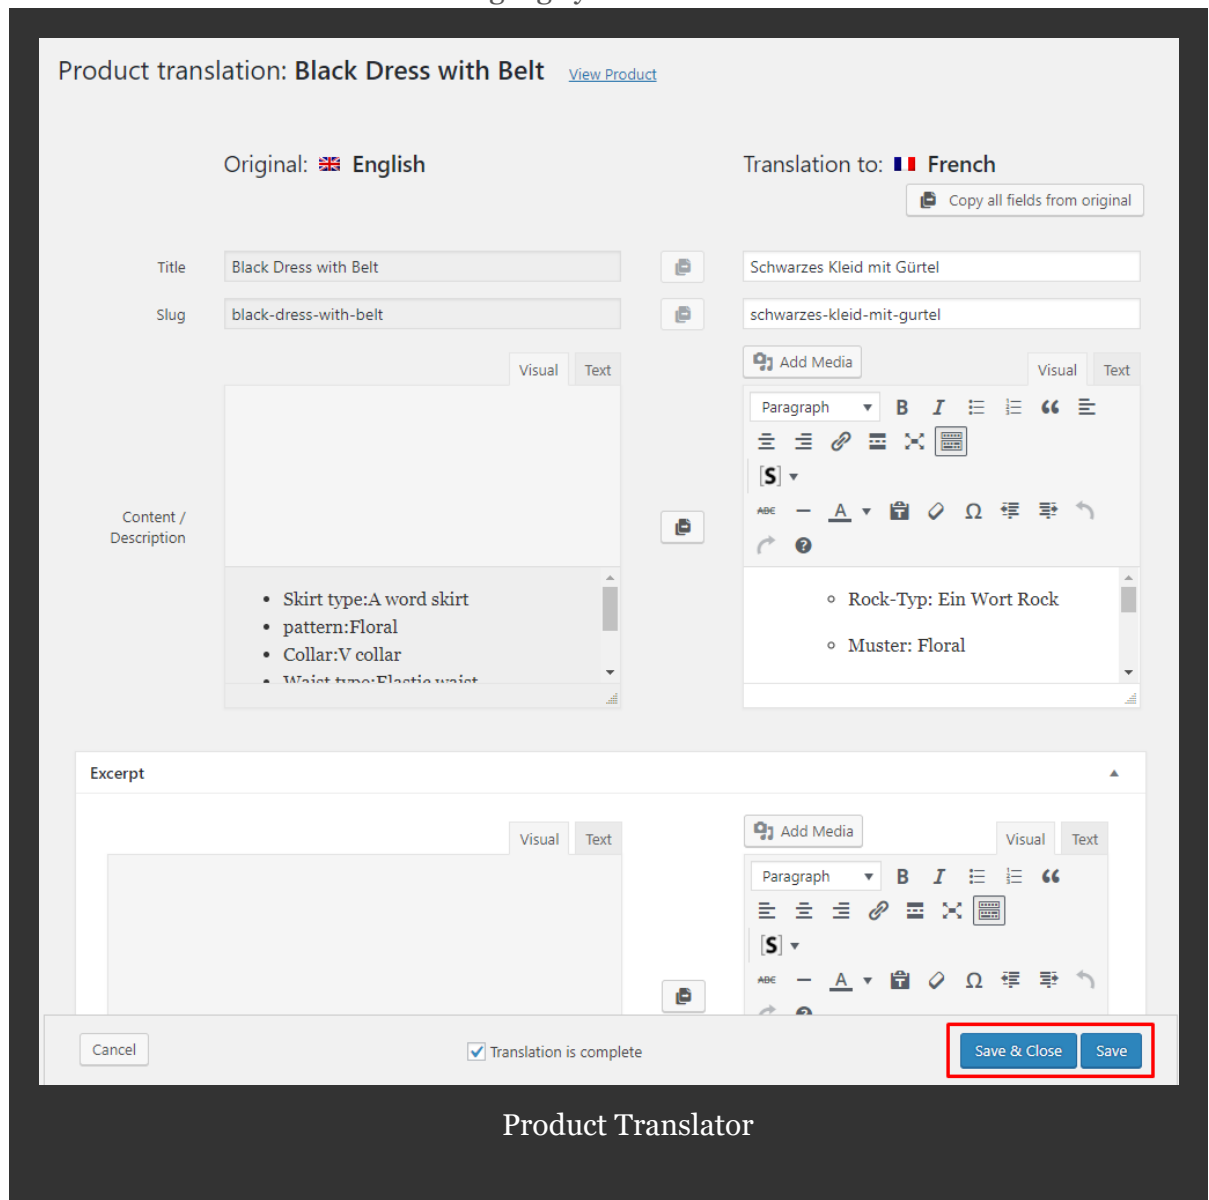

Custom Fields

Custom fields will show when activated/used in the site.

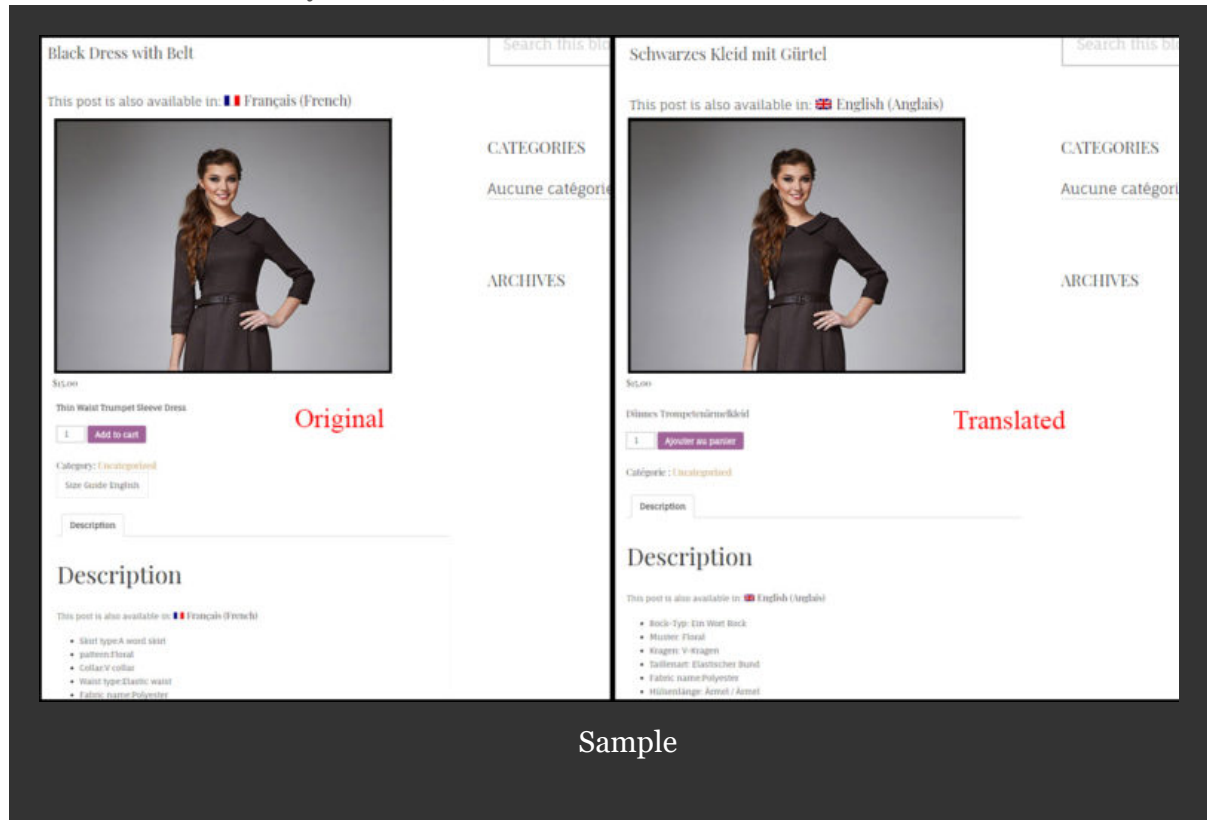

- When you have done all this, go to *WooCommerce > WooCommerce Multilingual*. You will see all the products available. Choose a product and click on the Plus Sign (+) on the language you would like to add a translation to.

- You will see the Original (English) version of the text content of the product item and an area to add the translation of the language you chose.

- Add the translation as you see fit, then click the *Save* button.

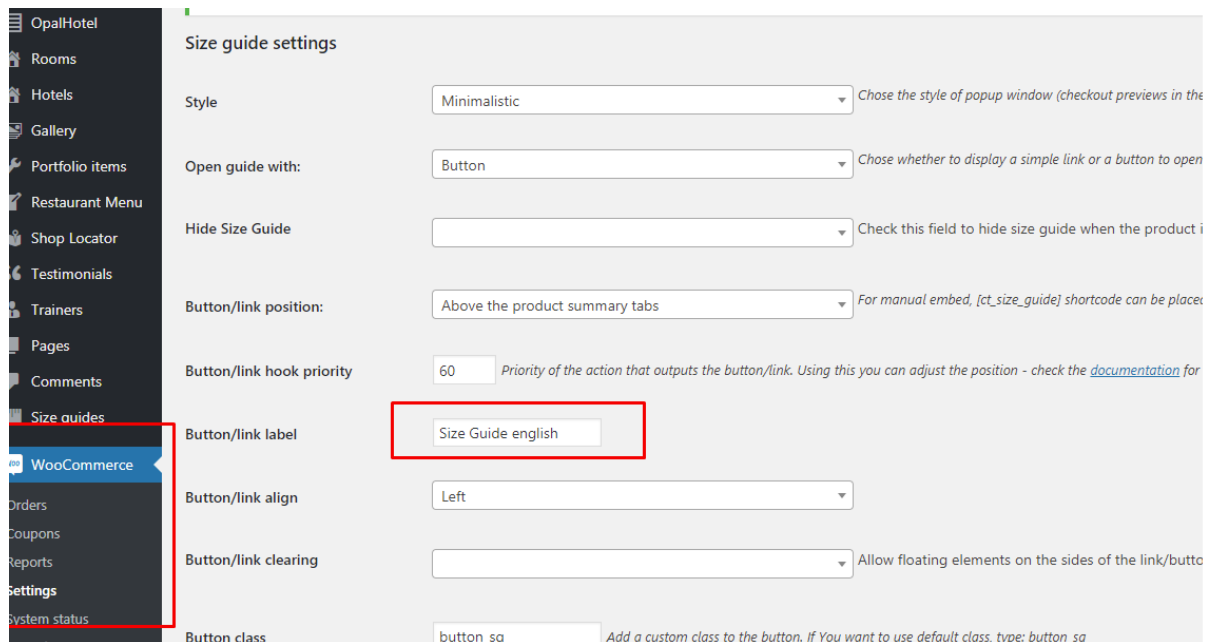

How translate the button

Adding separate size guide label with different languages can be integrated to this plugin.

To make a *Size Guide Label* with a different language, follow the steps:

- **Step 1** – In *WooCommerce > Settings > Size guide settings*, Add the label that will be used for the *Size Guide button/link*. This will be used later to label what language is going to be used.

- **Step 2** – In *WPML > String Translation*, look for the button/link associated with the *Size Guide*, then set the labels for other languages used in the theme.
- **Step 3** – Once done, click on *Save*. The result would be like this:

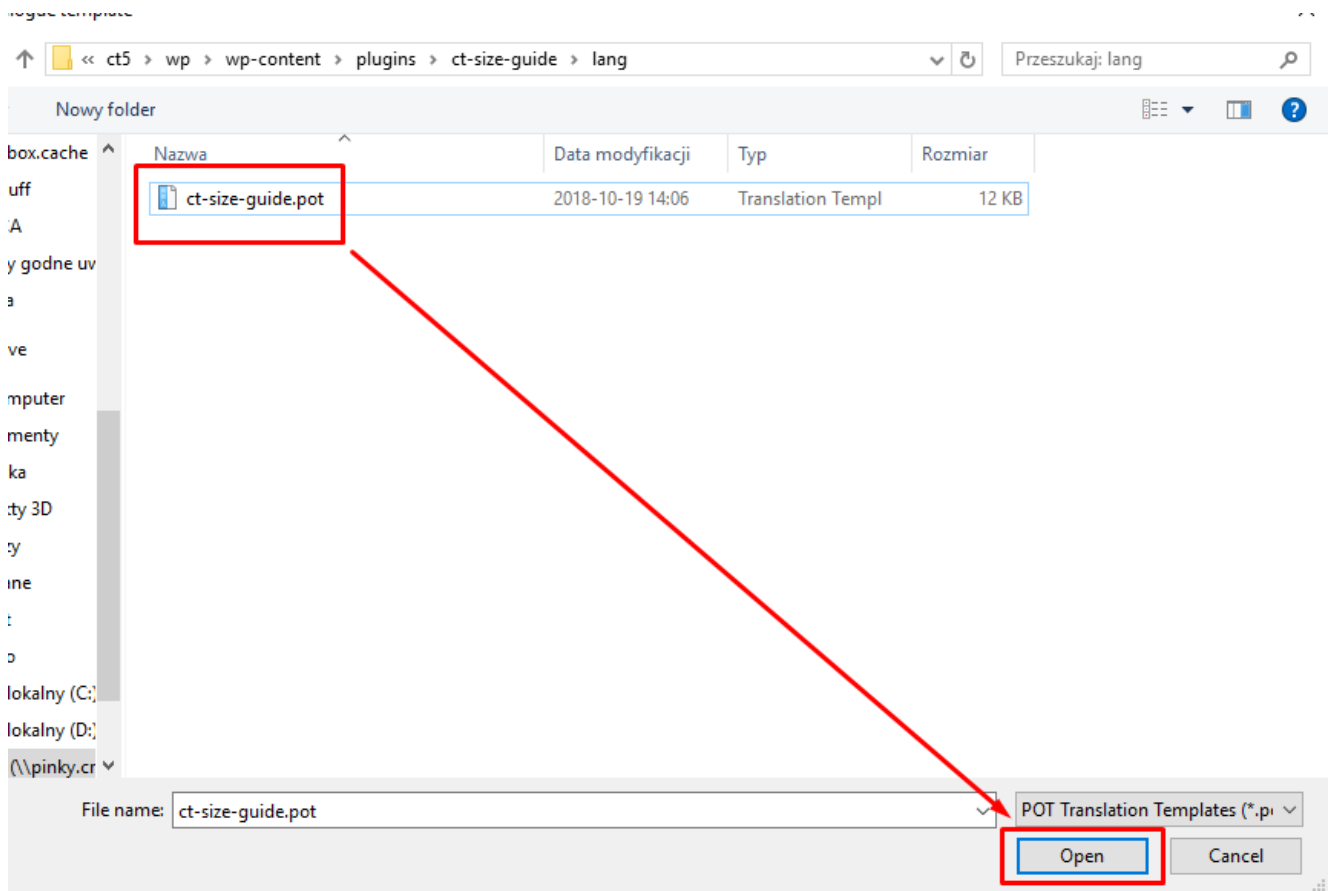

4. Translating SizeGuide to different language using POT file

POT is generated from plugin files and contain all phrases from the plugin that can be translated to a different language. The POT file for this plugin is **ct-size-guide.pot**, and it can be found on path **/wp-content/plugins/ct-size-guide/lang/**

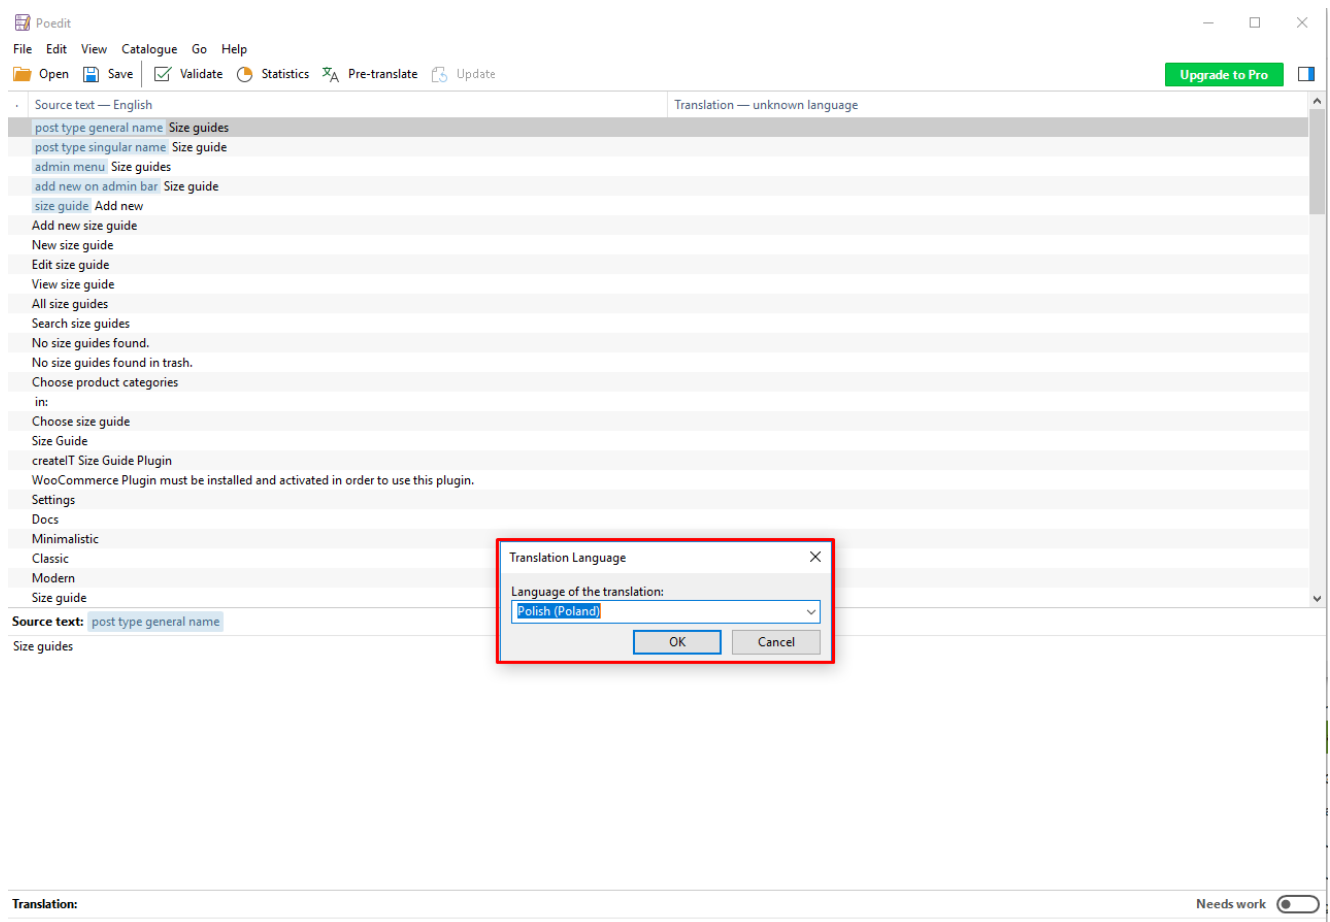

The translation can be created by a translation editor like [Poedit](#) or one of the free to use WordPress plugins like [Loco Translate](#). This way you will be able to create PO (Portable Object) and MO (Machine Object) file from the plugin POT file. But the only file we are able to edit is the PO file. In the PO file, we are saving both English and the translations for this phrases. All translations you created are added there. Saving the changes there will also update the MO file that is used by the plugin.

How to translate plugin using Poedit

- Install a translation editor from this site [Poedit](#) on your computer.
- Choose the **ct-size-guide.pot** file to translate.

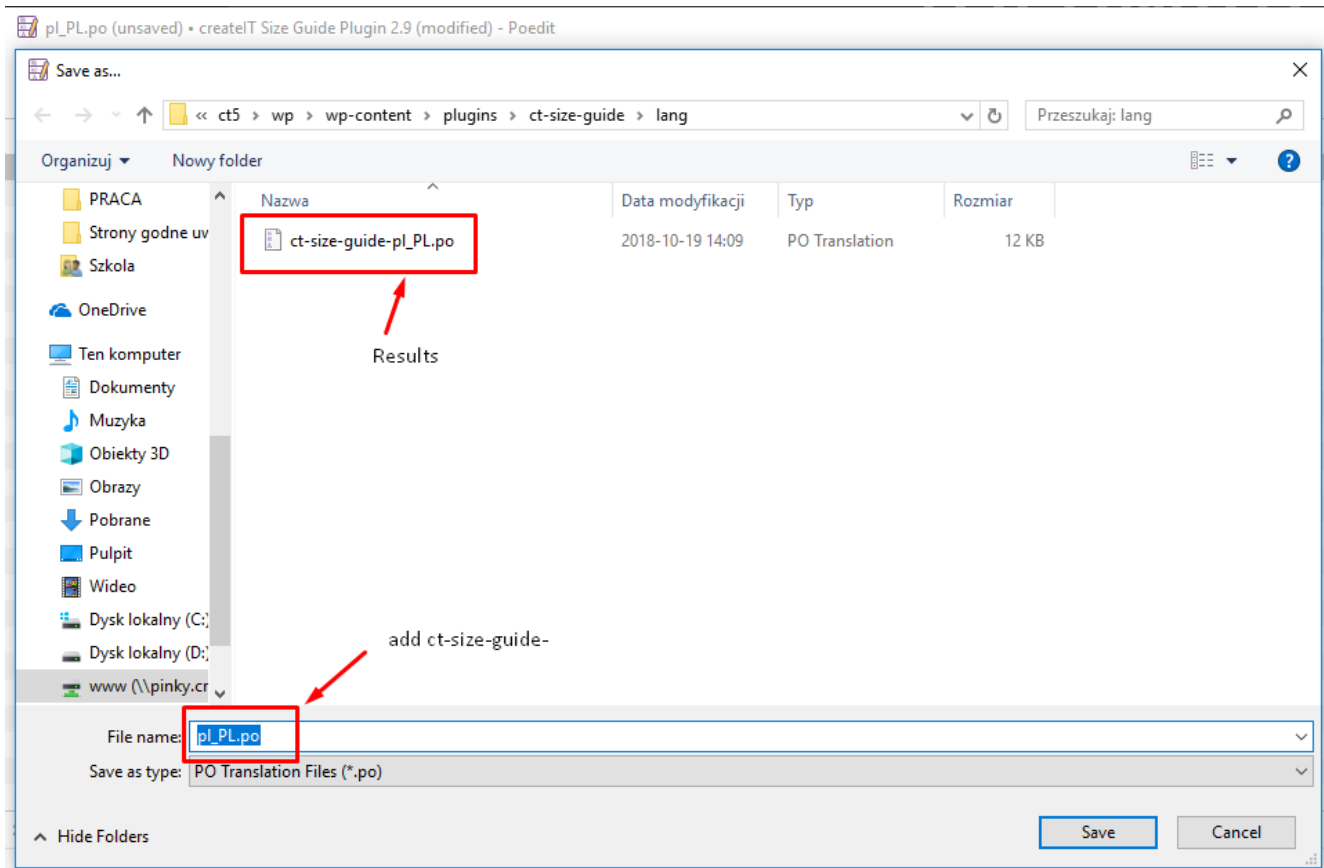

- You will be asked what language to translate the file into. Choose the language you wish to translate to:

- Click on a word from the source text one by one and translate.

- Once done translating the words in the Source text, save the file.
- When saving a file, *ct-size-guide-* should be added to the default file name.

- Once saved, it will create a PO and MO file.
- Copy the PO and MO file to the WordPress language directory located at `/wp-content/languages/plugins` or `/wp-content/plugins/ct-size-guide/lang`
- To activated the created translation please, navigate your dashboard to **Settings > General**.
- You will see the General Settings of your site. To activate the translation, look for the Site Language and select the one that you like.

- After selecting the site language, click the Save Changes button and a loading icon will show. Once the loading icon disappears, the translation should be done.

For more information on how to translate a plugin using Poedit, click this [link](#).

How to translate plugin using Loco Translate

To translate the English text used in our Size Guide plugin please follow steps below:

- Install and activate the plugin [Loco Translate](#)
- Then from your Dashboard Go to **Loco Translate > Plugins** where createIT *Size Guide Plugin* can be chosen.
- Go to the *Advanced* tab and set there where you will be able to set the path to POT file: *lang/ct-size-guide.pot* click *Save config* button.

- Go back to *Overview* tab and click the *+ New language* button.
- Then on the next screen, a Country dropdown list will appear, Select The language you want the texts to be translated. e.g: *Polish* and continue.
- On the next screen, all the English text strings that are inside the plugin will be listed. Select text string from the *Source text* list and then Add your translated text in the text area below and click save.

The screenshot shows the Loco Translate interface. On the left, a sidebar contains a list of WordPress dashboard items: Komentarze, Size guides, WooCommerce, Produkty, Wygląd, Wtyczki, Użytkownicy, Narzędzia, Ustawienia, and Loco Translate (which is highlighted). Below this is a 'Zwiń menu' button. The main content area has tabs for Editor, Source, File info, Restore, and Delete. The 'Editor' tab is active, showing the 'Polski' language. A status bar indicates 'Updated: Październik 22, 2018 1:27 pm – 1% translated, 114 strings (113 untranslated)'. Below this are buttons for Save (highlighted with a red box), Sync, Revert, Fuzzy, and a 'Filter translations' input field. The interface is divided into 'Source text' and 'Polski translation' sections. The source text includes a list of items: Left, Link, Make it a tab, Margin bottom, Margin left (marked with a star), Margin right, and Margin top. The translation for 'Margin left' is 'Lewy margines'. At the bottom, it says 'Loco Translate is powered by Loco'.

- To activate the created translation please, navigate your dashboard to **Settings > General**.
- You will see the General Settings of your site. To activate the translation, look for the Site Language and select the one that you like.

For more information please follow created by developers Guides and Tutorials which can be found here: [LINK](#).

4.1 Assigning a size guide to a product

There are two ways to get the size guide displayed:

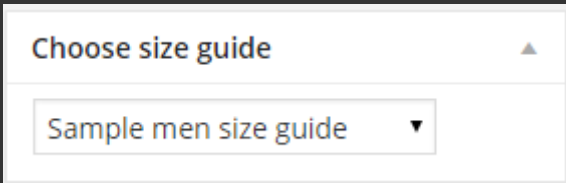

You can assign a size guide to one category or a few, by selecting a category on the size guide editing screen

Assign a size guide to a category

Once size guide is assigned to the whole product category or categories you can still disable it for single products by checking option *Hide size guide from this product*

Or you can assign a size guide to a particular product by using the “Choose size guide” box on the product editing screen:

Assign a size guide to a product

If you select a size guide for a particular product, it will be attached to that product even if the products category has its own size guide assigned.

4.2 Creating a style

You can add your own stylesheet to the settings tab using `ct_sizeguide_styles` filter.

Example:

```
add_filter('ct_sizeguide_styles', 'add_sizeguide_style');

function add_sizeguide_style($current){
    $StylesheetURL = 'http://www.example.com/assets/sg_style.css'; //link to the stylesheet
    $label = 'My custom style'; //name of the style to be displayed in the settings
    $current[$StylesheetURL] = $label;
    return $current;
}
```

This code should go to your `functions.php` file (or anywhere else you wish).

If you are developing a theme and want your style to be selected upon the plugin activation, simply change the body of the function to:

```
$current = array($StylesheetURL => $label) + $current;
return $current;
```
