# 1. Main features of this software?

This software is a full featured restaurant management ERP software specially having these features:

- Offline Sync
- Recipe Management
- Recipe Wise Cost Calculation
- Stock Auto Deduct By Sale
- Protect Stock From Stealing
- Check Demo
- QR Code Order-Self Order
- Free Waiter App
- Innovative Running Order Panel
- Online Order
- Stock aka Smart Stock
- Online Reservation
- White Labeled
- Pre and Post Payment
- Double Unit Feature
- Migration Easy Software
- Multi Outlet-Branch
- Multi Language
- Product Variation
- Different Pricing for Different Outlet
- Table and Area Management
- Toppings-Modifier-Preparation Note
- Service-Delivery Charge Configuration
- Tax
- Powerful POS
- Combo
- Promotion
- Loyalty Point
- Category Wise KOT Printer
- Category Wise Kitchen Panel - KDS
- Delivery Management
- Currency
- Multi Currency
- Split Bill
- Waiter Feature
- Premade Food and Production
- SMS Integration
- Looking For SaaS
- Order Cancel and Delete Log
- Z Report
- Waste Tracking
- Item Analysis Report
- Customer Display
- Order Status Screen
- Multiple Payment in One Sale

- Stock Transfer
- Adjust Stock
- Low Stock Alert
- Others
- Customer Profile
- Customer Due Tracking
- Ingredient Purchase
- Supplier Due Tracking
- Expense Tracking
- Open and Close Register
- Employee Mgmt. with Attendance
- Reports
- Business Intelligence Dashboard

And a lot more.....

## 2. Getting Started

### 2.1. Server Requirement

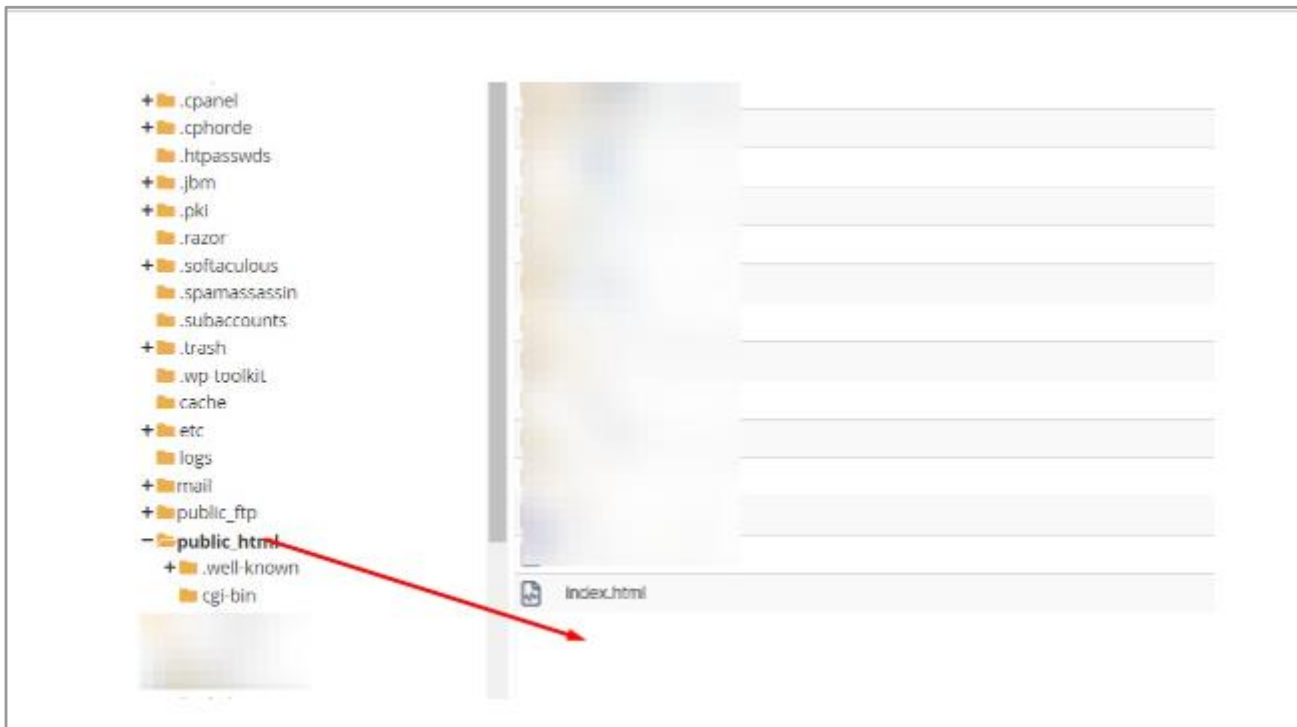

- PHP 8+
- MySQL 5.6+
- Extensions need be enabled: Mysqli, CURL ,intl (*in case you want to use print server*)

### 2.2. How to get a purchase code?

Please check this video provided by envato marketplace: <https://help.market.envato.com/hc/en-us/articles/202822600-Where-Is-My-Purchase-Code->

### 2.3. Install in Web Server using Cpanel

Upload your downloaded zip file and extract it on the root path of your server. Or you can create a new folder or subdomain and upload it there, like: public\_html/irestora\_plus or irestora\_plus.your-domain.com

Go to your browser and enter the URL where you have uploaded the source code and access the installer in this way like: yourdomain.com/install or yourdomain.com/inrestora\_plus/install or [http://irestora\\_plus.yourdomain.com/install/](http://irestora_plus.yourdomain.com/install/)

Env. Check	Verification	DB Config	Site Config	Complete!
------------	--------------	-----------	-------------	-----------

### Server Environment Checklist

- ✓ You are running PHP 7.4.27
- ✓ Mysqli PHP extension loaded!
- ✓ CURL PHP extension loaded!

Next

Click on Next and enter your envato username and purchase code for verification of your purchase.  
NB: Here Username is your envato login username

✓ Env. Check	Verification	DB Config	Site Config	Complete!
--------------	--------------	-----------	-------------	-----------

### Verify your purchase

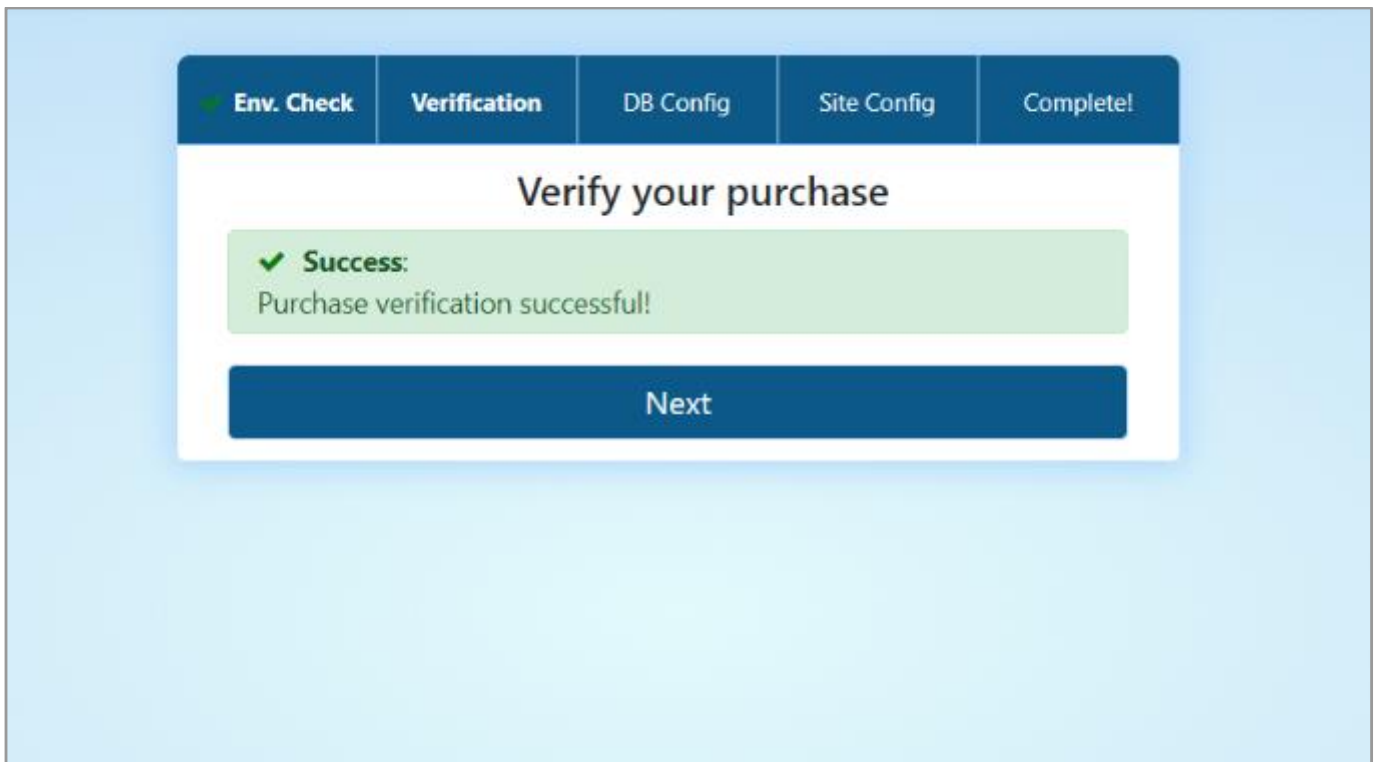

Please provide your purchase information

Username

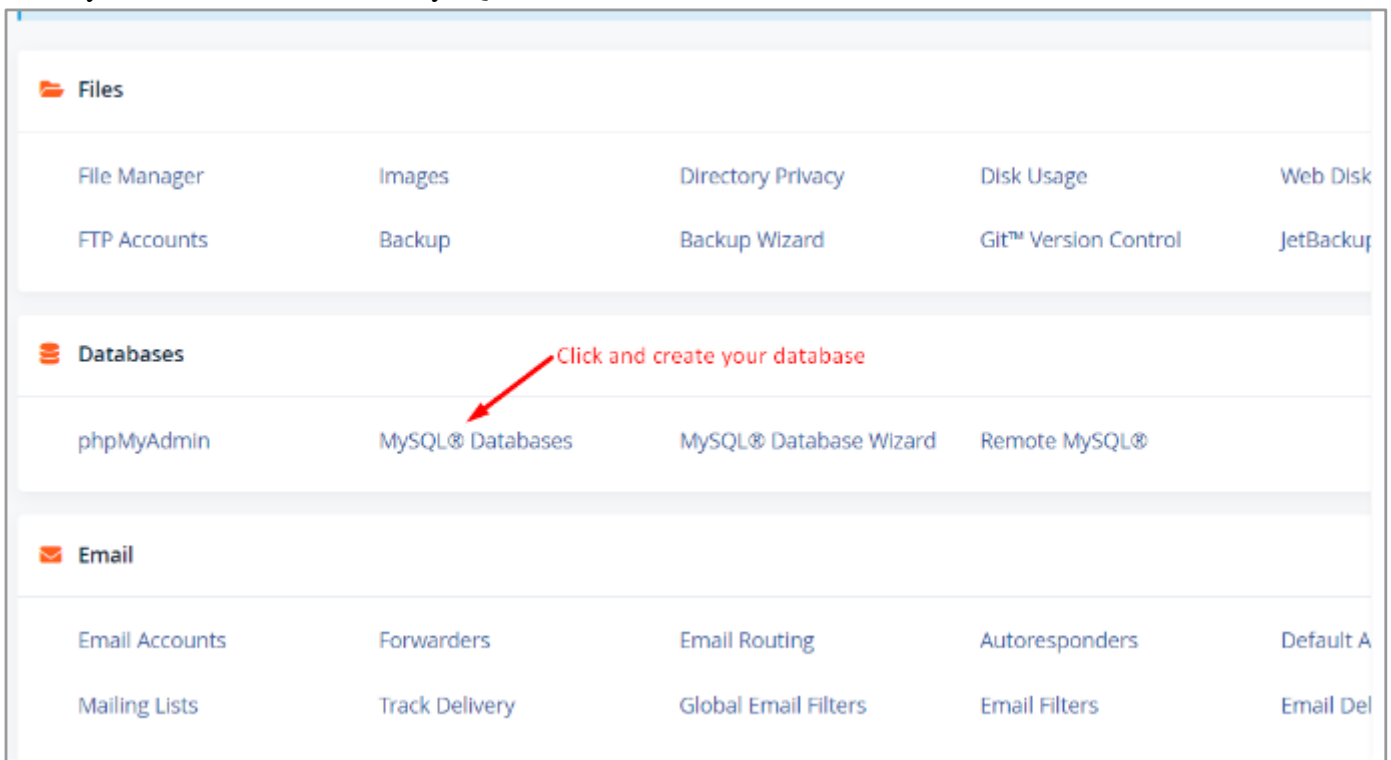

Purchase Code

Verify

After clicking on the Verify button, if successful on the Envato purchase code and Envato username. Then click on Next

Go to your server and click on MySQL® Databases

Enter your database name and create a database.

# MySQL® Databases

Manage large amounts of information over the web easily. MySQL databases are necessary to run many web-based applications, such information, read the [documentation](#).

## Create New Database

New Database:

dsbeta\_ irestora\_plus

Create Database

put your database name here

## Modify Databases

Check Database

Keep the database name, database username, and password in a text editor.

# MySQL Users

## Add New User

Username

dsbeta\_ irestora\_plus\_user

database user name

Password

.....

database password

Password (Again)

.....

confirm database password

Strength 

Very Strong (95/100)

Password Gene

Create User

Click User button for create user

Find Add User to Database to assign the newly created user to the database. Select your database user and database.

Create User

## Add User To Database

User:

Database:

Add

## Current Users

Users	Actions
irestora_plus_user	<a href="#">Change Password</a> <a href="#">Rename</a> <a href="#">Delete</a>

After clicking on the Add button check all privileges for your database user.

☒ ALL PRIVILEGES

<input checked="" type="checkbox"/> ALTER	<input checked="" type="checkbox"/> ALTER ROUTINE
<input checked="" type="checkbox"/> CREATE	<input checked="" type="checkbox"/> CREATE ROUTINE
<input checked="" type="checkbox"/> CREATE TEMPORARY TABLES	<input checked="" type="checkbox"/> CREATE VIEW
<input checked="" type="checkbox"/> DELETE	<input checked="" type="checkbox"/> DROP
<input checked="" type="checkbox"/> EVENT	<input checked="" type="checkbox"/> EXECUTE
<input checked="" type="checkbox"/> INDEX	<input checked="" type="checkbox"/> INSERT
<input checked="" type="checkbox"/> LOCK TABLES	<input checked="" type="checkbox"/> REFERENCES
<input checked="" type="checkbox"/> SELECT	<input checked="" type="checkbox"/> SHOW VIEW

Make Changes Reset

Now come back to the installation tab of your browser and enter the database configuration data and click Next.

The screenshot shows the 'Database Configuration' step of an installation wizard. At the top, there is a progress bar with five tabs: 'Env. Check' (active), 'Verification', 'DB Config', 'Site Config', and 'Completed'. Below the progress bar, the title 'Database Configuration' is centered. The instructions read: 'Please create a database in your server. And enter the db information here.' There are five input fields: 'Database Host' (containing 'localhost'), 'Database Username' (containing 'irestora\_plus\_user'), 'Database Password' (containing masked characters '\*\*\*\*\*'), 'Database Name' (containing 'irestora\_plus'), and a 'Next' button at the bottom.

After clicking on Next it will be shown as a screenshot and click on Next again for the next step.

The screenshot shows the 'Saving database config' step. The progress bar at the top has 'Env. Check', 'Verification', and 'DB Config' as active tabs. The title 'Saving database config' is centered. There are two green success messages: '✓ Connection to MySQL successful' and '✓ Database config written to the database file.' Below the messages are two buttons: 'Previous' and 'Next'.

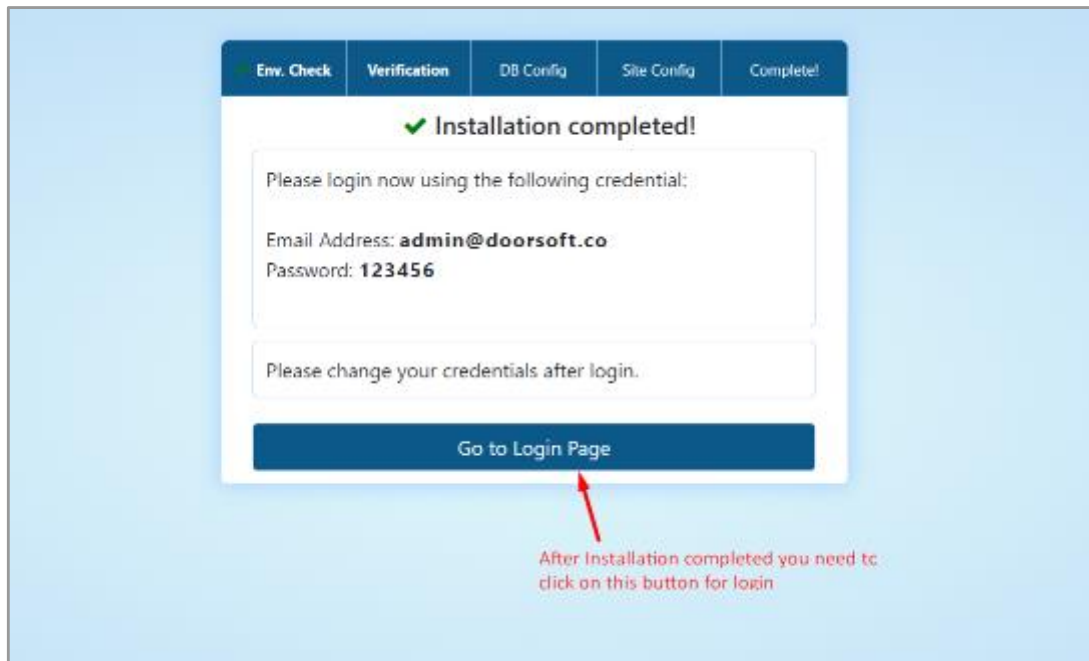

After Clicking on the Next button it will be shown as a screenshot and click on Next.

The screenshot shows the 'Site Config' step. The progress bar at the top has 'Env. Check', 'Verification', and 'DB Config' as active tabs. The title 'Site Config' is centered. There are two input fields: 'Installation URL' (empty) and 'Encryption Key' (containing 'UkaXAK'). Below the fields are two buttons: 'Previous' and 'Next'.

After clicking on the Next button it will be shown like this screenshot and click on Next.

The screenshot shows the 'Saving site config' step. The progress bar at the top has 'Env. Check', 'Verification', and 'DB Config' as active tabs. The title 'Saving site config' is centered. There is one green success message: '✓ Config details written to the config file.' Below the message are two buttons: 'Previous' and 'Next'.

Installation completed.

Finally, run the script by accessing  
your-domain.com OR your-domain.com/irestora\_plus OR [http://irestora\\_plus.your-domain.com/](http://irestora_plus.your-domain.com/)

Your default login credentials are:

Email: admin@doorsoft.co

Password: 123456

PIN: 1111

## 2.4. Install in PC using local server

First, you need to install xampp or wamp or lamp server, then upload the downloaded zip file inside of the htdocs folder of xampp and extract it. You can check, how to install xampp from here:

[https://youtu.be/\\_TDiZWoiewk](https://youtu.be/_TDiZWoiewk)

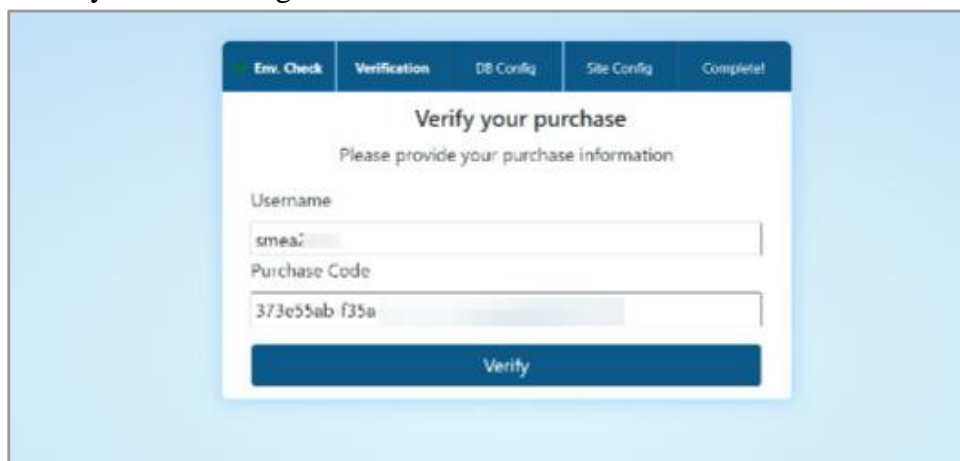

Go to your browser and enter the URL: localhost/irestora\_plus/install

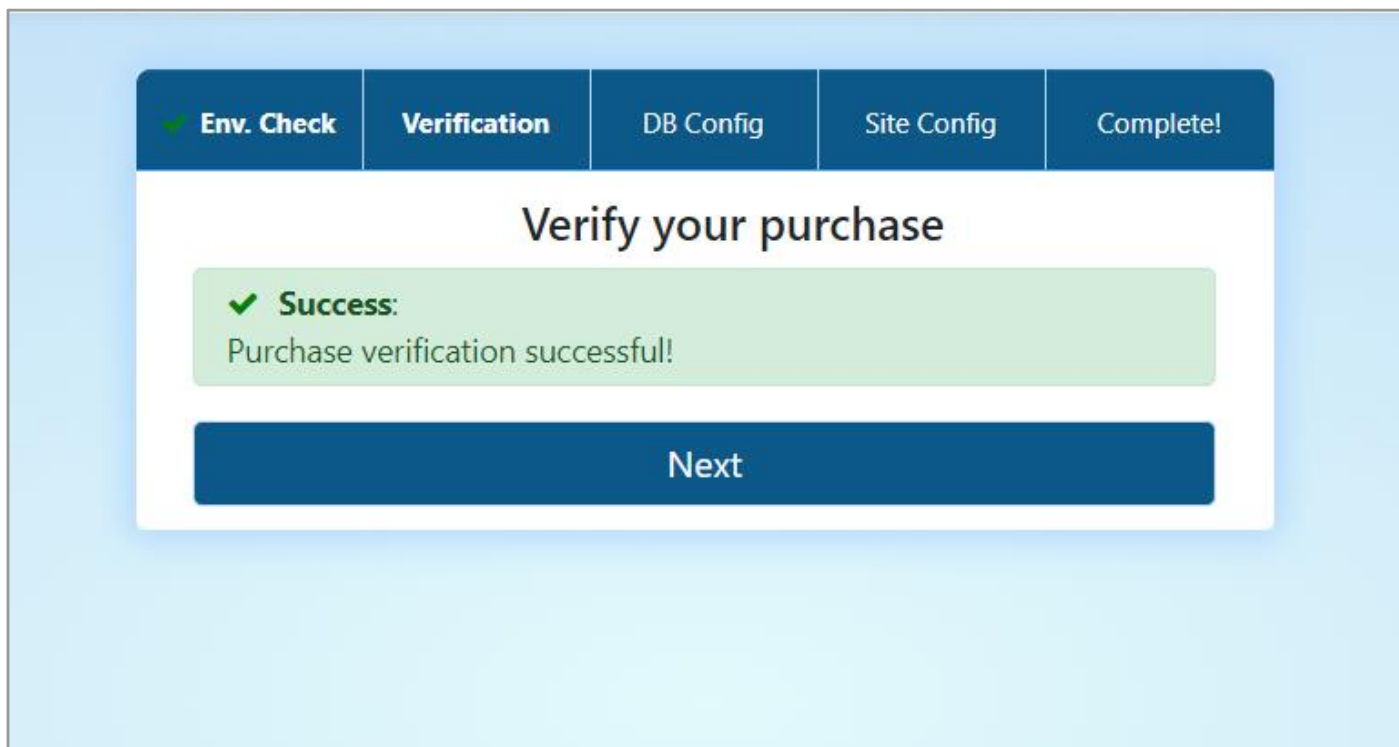

Click on Next and enter your envato username and purchase code for verification of your purchase.

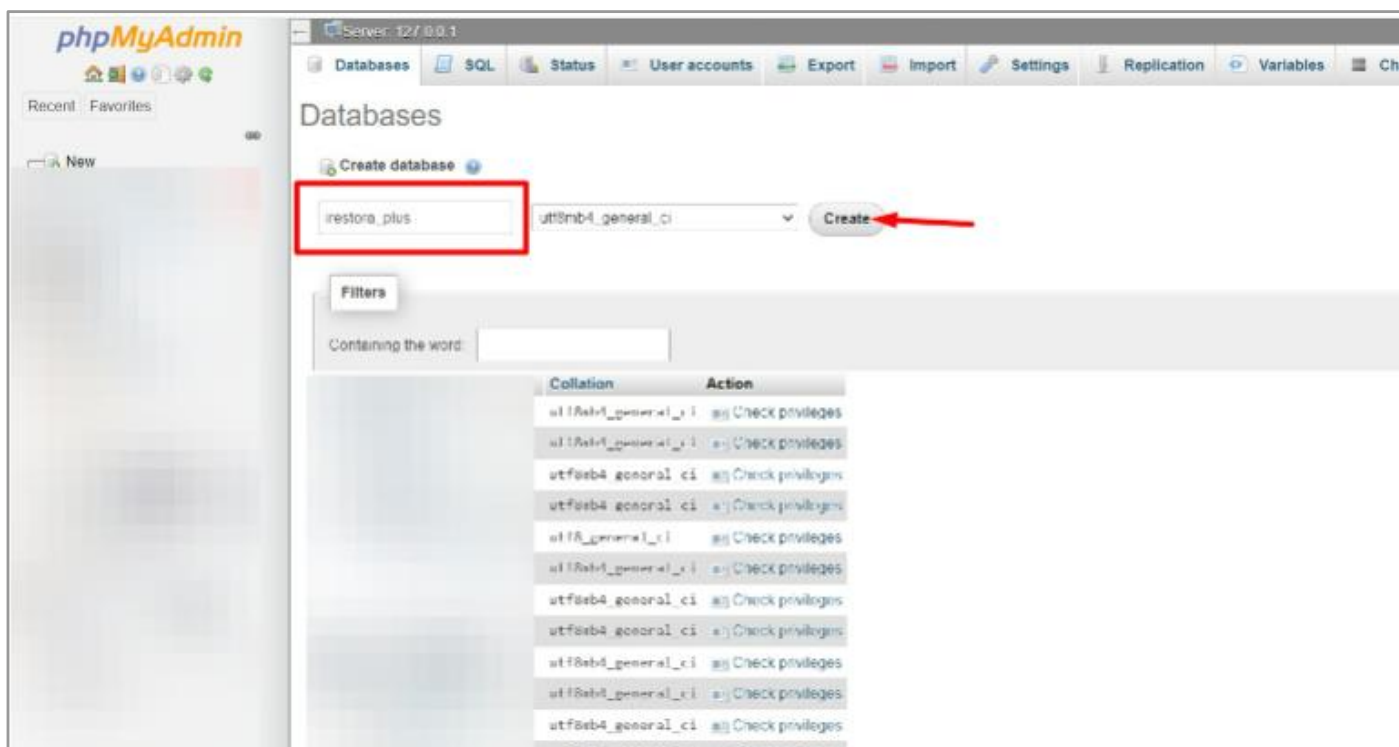

NB: Here Username is your envato login username

After clicking on the Verify button, if successful on the Envato purchase code and Envato username. Then click on Next

Create a database named irestore\_plus or any others as per your need.  
Go to your browser and enter localhost/phpmyadmin  
and create the database

Enter the database configuration data and click Next.

Env. Check	Verification	DB Config	Site Config	Completed
<h3>Database Configuration</h3> <p>Please create a database in your server. And enter the db information here.</p> <p>Database Host <input type="text" value="localhost"/></p> <p>Database Username <input type="text" value="root"/></p> <p>Database Password <input type="text" value="DB Password"/></p> <p>Database Name <input type="text" value="irestora_plus"/></p> <p><b>Next</b></p>				

default username for database

you can keep blank or you can put database password

database name

After clicking on Next it will be shown as a screenshot and click on Next again for the next step.

Env. Check	Verification	DB Config	Site Config	Completed
<h3>Saving database config</h3> <p>✓ Connection to MYSQL successful!</p> <p>✓ Database config written to the database file.</p> <p><b>Previous</b></p> <p><b>Next</b></p>				

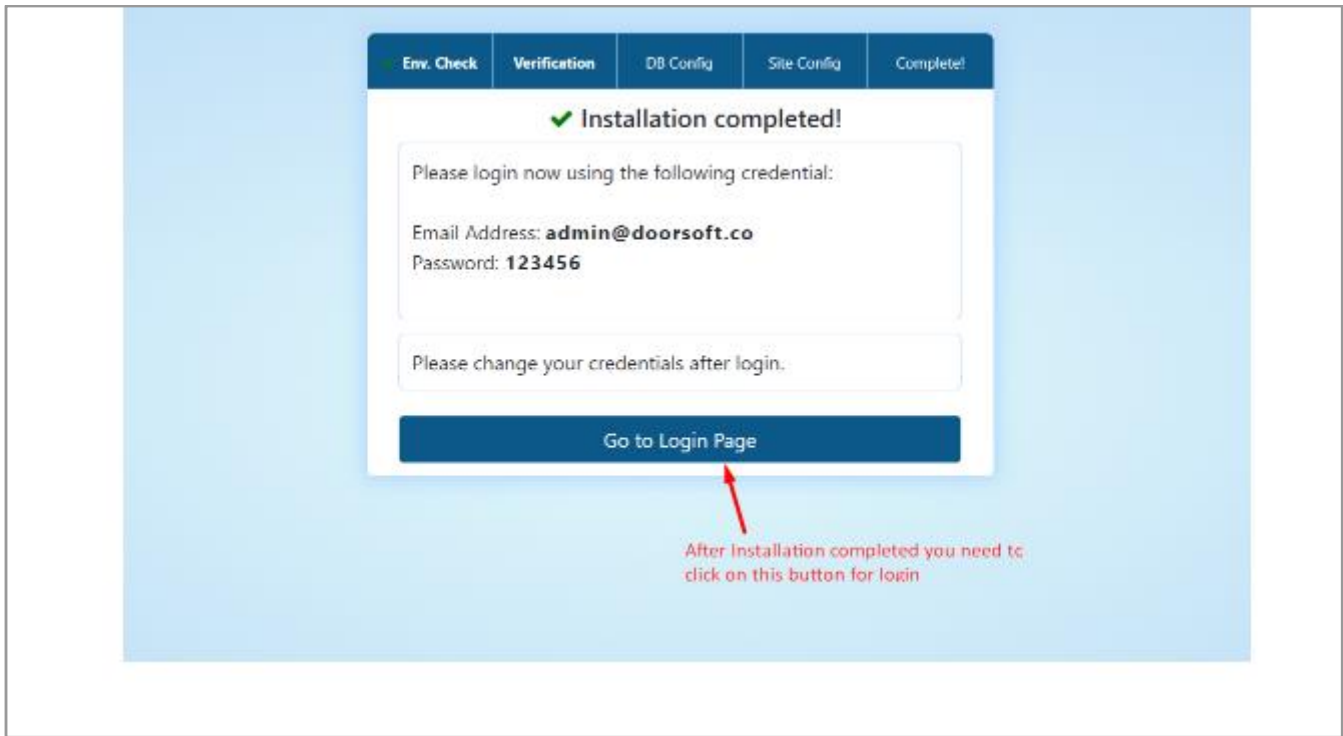

After clicking on the Next button it will be shown like this screenshot and click on Next.

The screenshot shows a web interface for the 'Site Config' step. At the top, a horizontal navigation bar contains five tabs: 'Env. Check' (with a green checkmark), 'Verification', 'DB Config', 'Site Config' (active), and 'Completed'. Below the tabs, the title 'Site Config' is centered. The form contains two input fields: 'Installation URL' with the value 'http://localhost/irestora\_plus/' and 'Encryption Key' with the value 'UkaXAK'. At the bottom of the form are two large blue buttons labeled 'Previous' and 'Next'.

After clicking on the Next button it will be shown as a screenshot and click on Next.

The screenshot shows the 'Saving site config' step. The navigation bar at the top is identical to the previous step, with 'Site Config' still active. The main heading is 'Saving site config'. Below it is a green success message: '✓ Config details written to the config file.' At the bottom are two large blue buttons labeled 'Previous' and 'Next'.

Installation completed.

Finally, run the script by accessing  
localhost/irestora from your browser

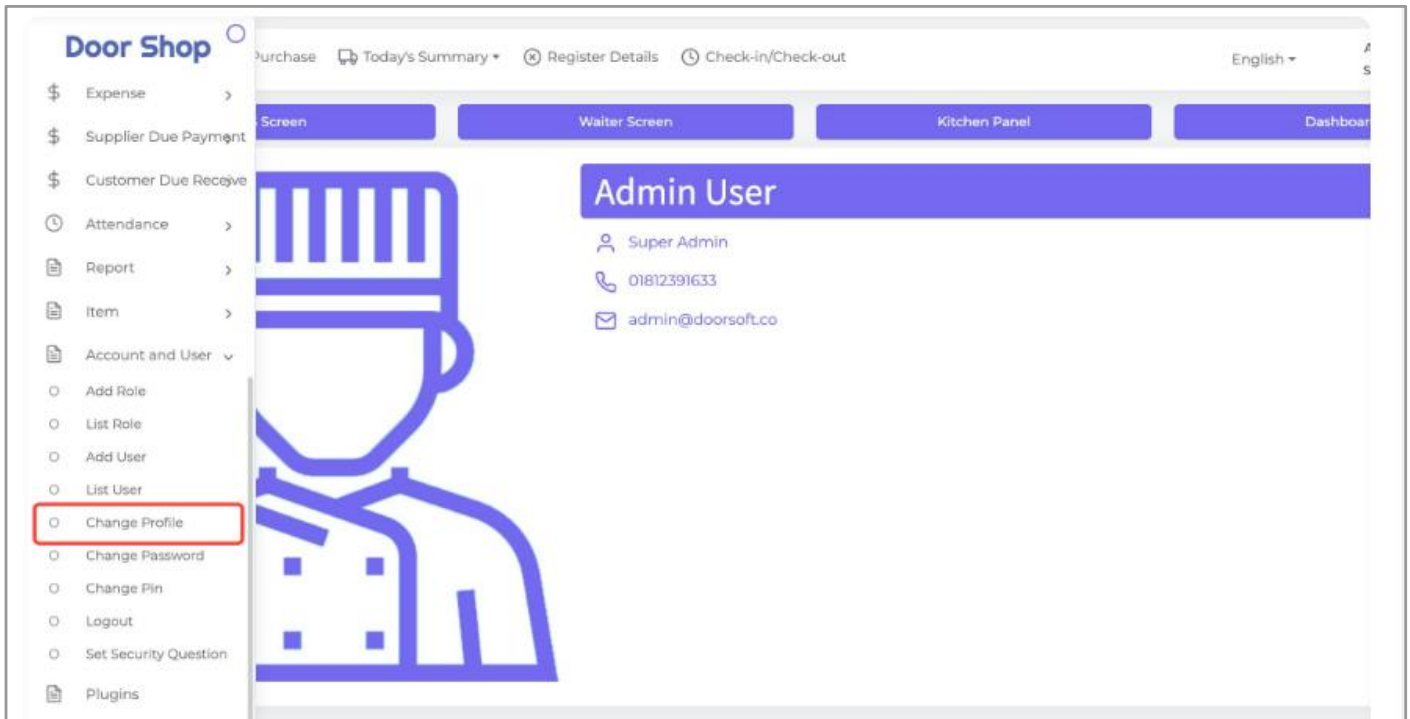

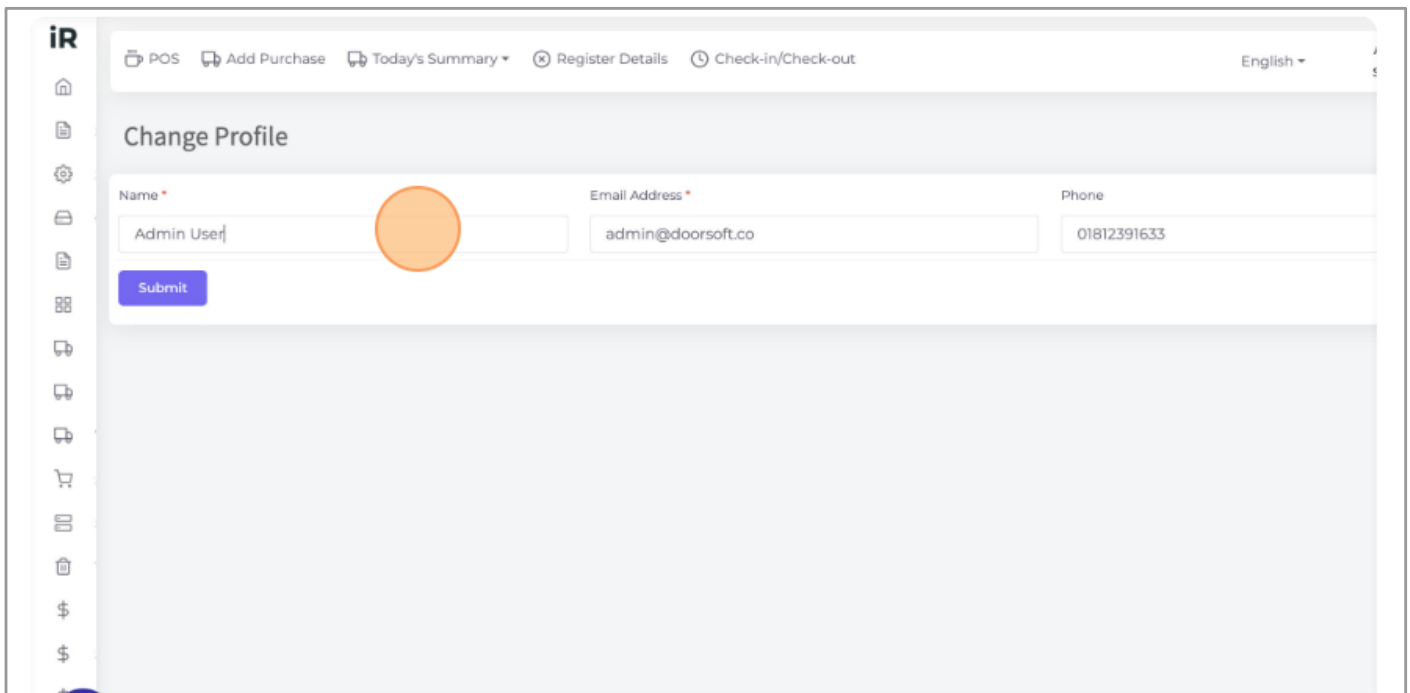

## 2.5. Change Profile

To change your profile name, email, or phone number please follow these instructions.

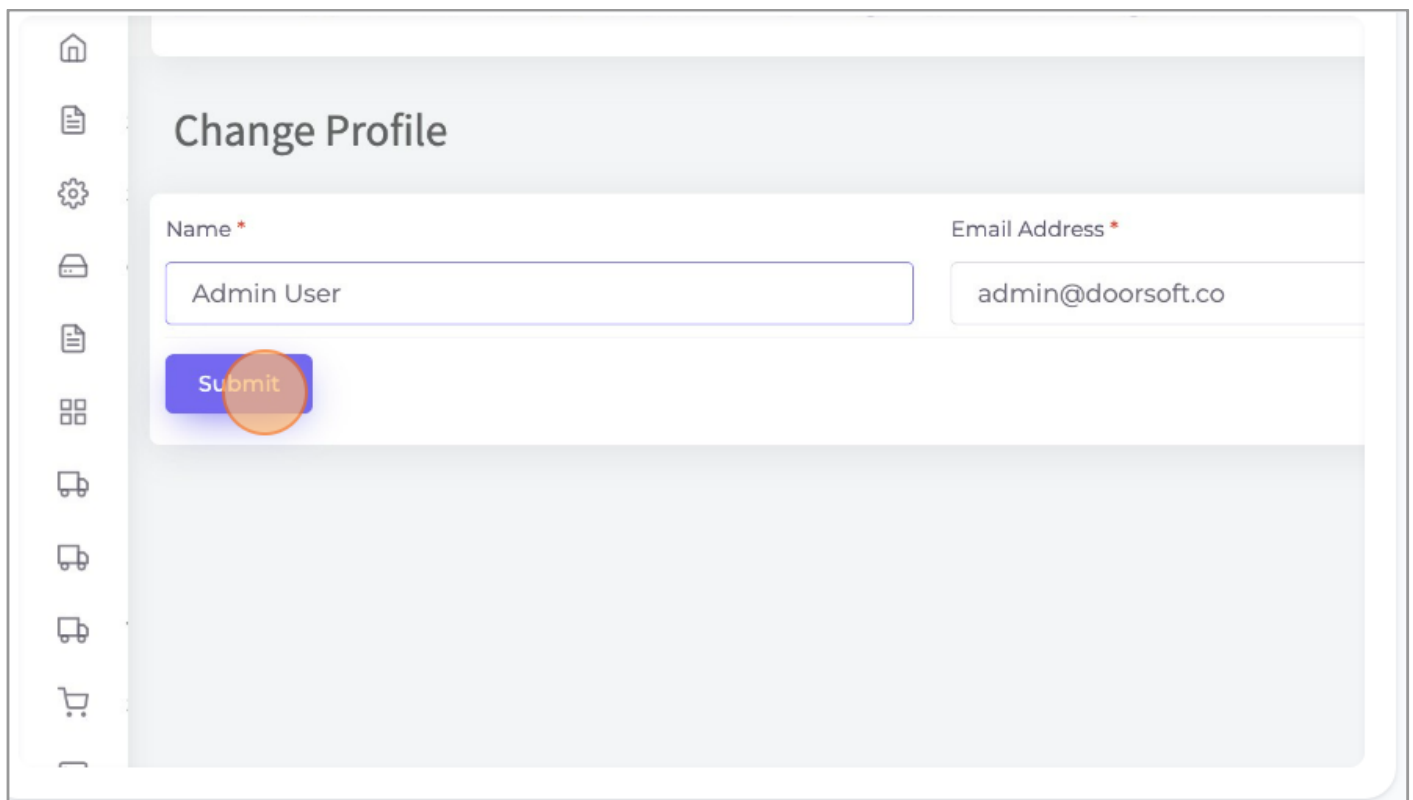

Go to the "Account and User" from the left menu and then click on "Change Profile".

Now you can put the Name, Email Address, and Phone by filling up these fields.

Click on the "Submit" button to change your profile.

The image shows a web interface for changing a profile. On the left is a vertical sidebar with icons for home, document, settings, printer, file, grid, truck, and shopping cart. The main content area has a title 'Change Profile' in a light blue header. Below the title are two input fields: 'Name \*' containing 'Admin User' and 'Email Address \*' containing 'admin@doorsoft.co'. A blue 'Submit' button is positioned below the Name field and is highlighted with a red circle.

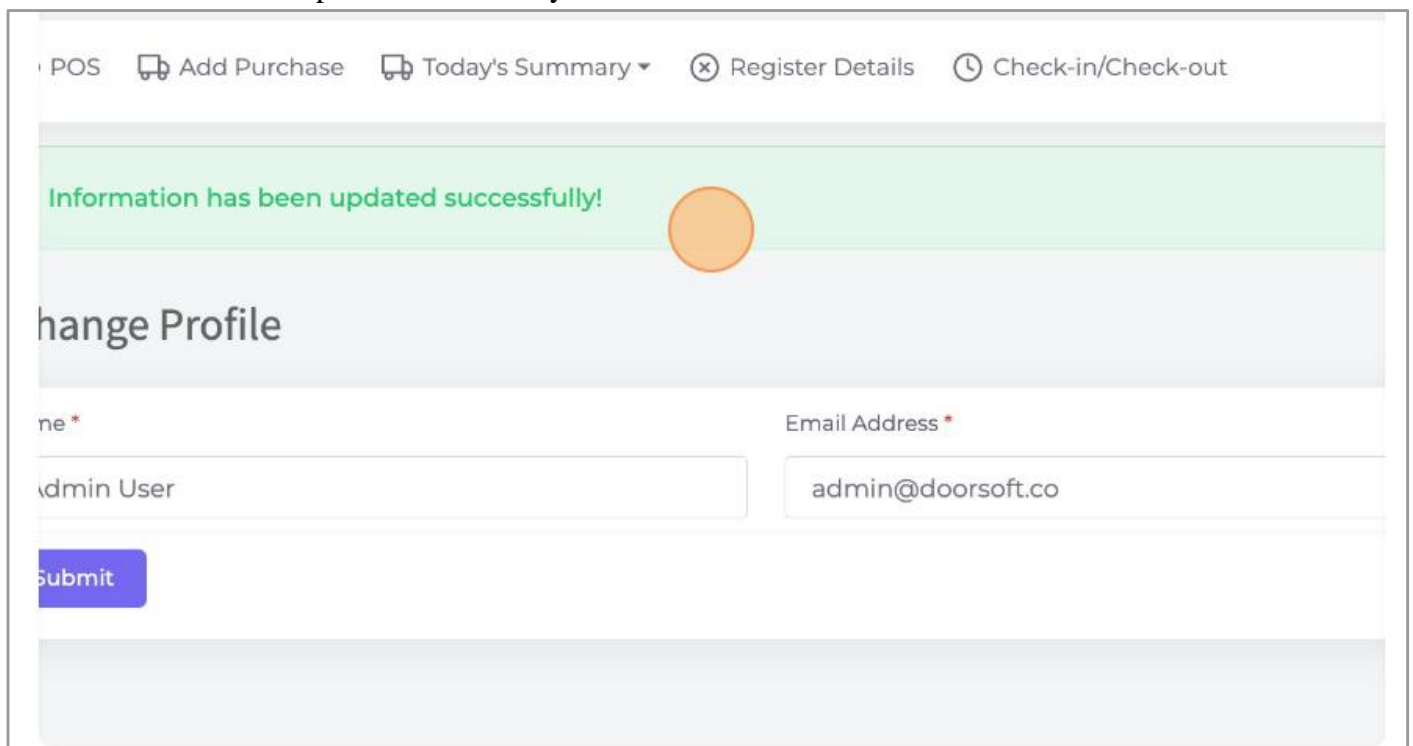

Change Profile

Name \* Email Address \*

Admin User admin@doorsoft.co

Submit

After successfully updated, it will show a message like this  
"Information has been updated successfully!".

The image shows the same 'Change Profile' form after a successful update. A green banner at the top of the main content area displays the message 'Information has been updated successfully!' in green text, with a red circle highlighting the message. Below the banner, the 'Change Profile' form is visible, showing the 'Name \*' field with 'Admin User' and the 'Email Address \*' field with 'admin@doorsoft.co'. A blue 'Submit' button is located below the Name field.

## 2.6. Change Password

To change your password, please follow these instructions.

Go to the "Account and User" from the left menu and then click on "Change Password".

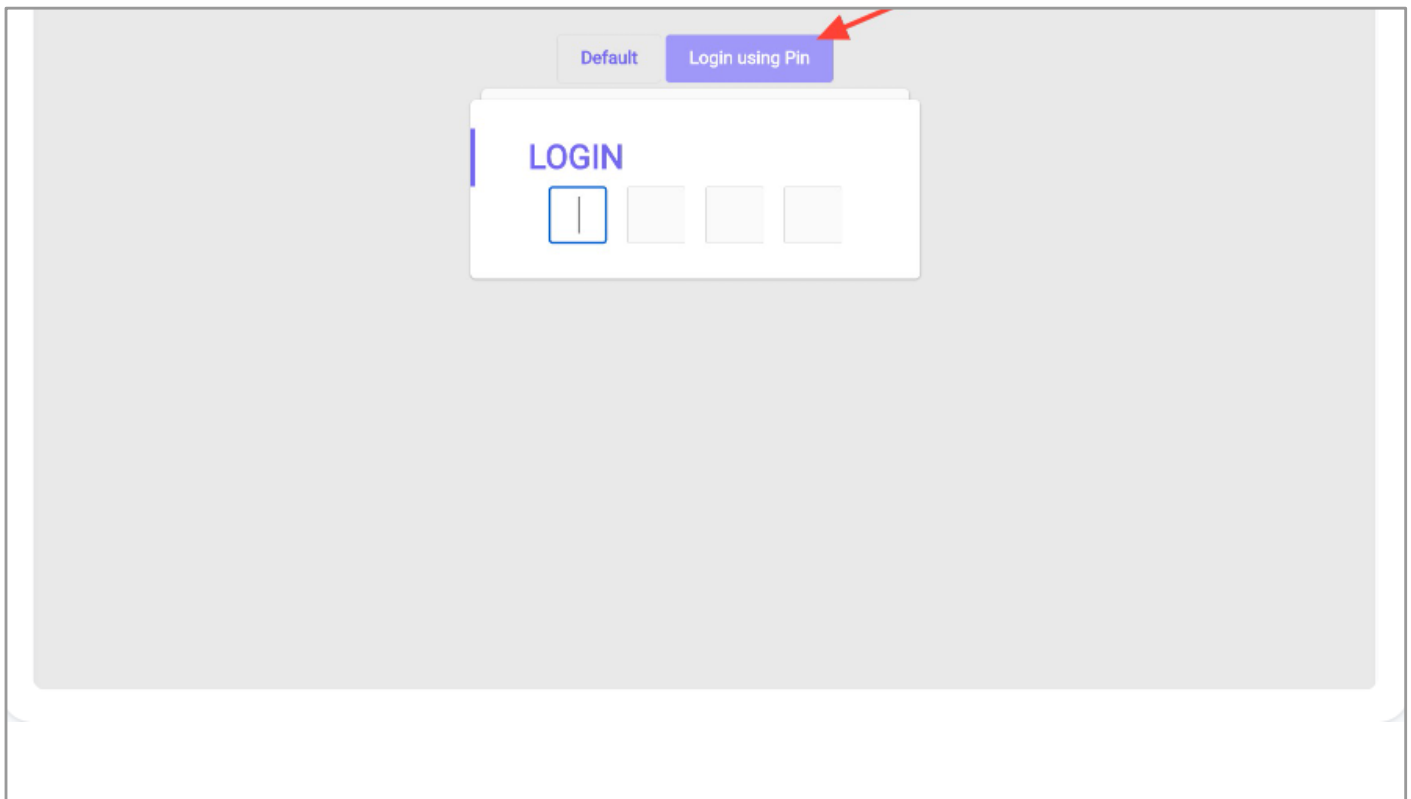

The screenshot displays the 'Door Shop' web application interface. On the left, a sidebar menu lists various functions: Expense, Supplier Due Payment, Customer Due Receive, Attendance, Report, and 'Account and User' (which is highlighted in blue). Under 'Account and User', options include Add Role, List Role, Add User, List User, Change Profile, 'Change Password' (highlighted with a red box), Change Pin, Set Security Question, and Logout. The main content area is titled 'Change Password' and contains two input fields: 'Old Password \*' and 'New Password \*', both with masked characters (.....). A blue 'Submit' button is positioned below these fields. At the top of the main area, a navigation bar includes links for POS, Add Purchase, Today's Summary, Register Details, and Check-in/Check-out.

Now enter your old password and new password. Click on the "Submit" button to change your password

## 2.7. Change Pin

You can change your login pin by following these instructions

In the login panel, you can enter your software with a login pin. To change the login pin follow these steps.

Go to the "Account and User" option from the left menu and the "Change Pin" to change the login pin.

Here click the "Old Pin" field and enter your old login pin. In the "New Pin" field enter the new pin which you want to set. Then click "Submit" to change the login pin.

## 2.8. Set Security Question

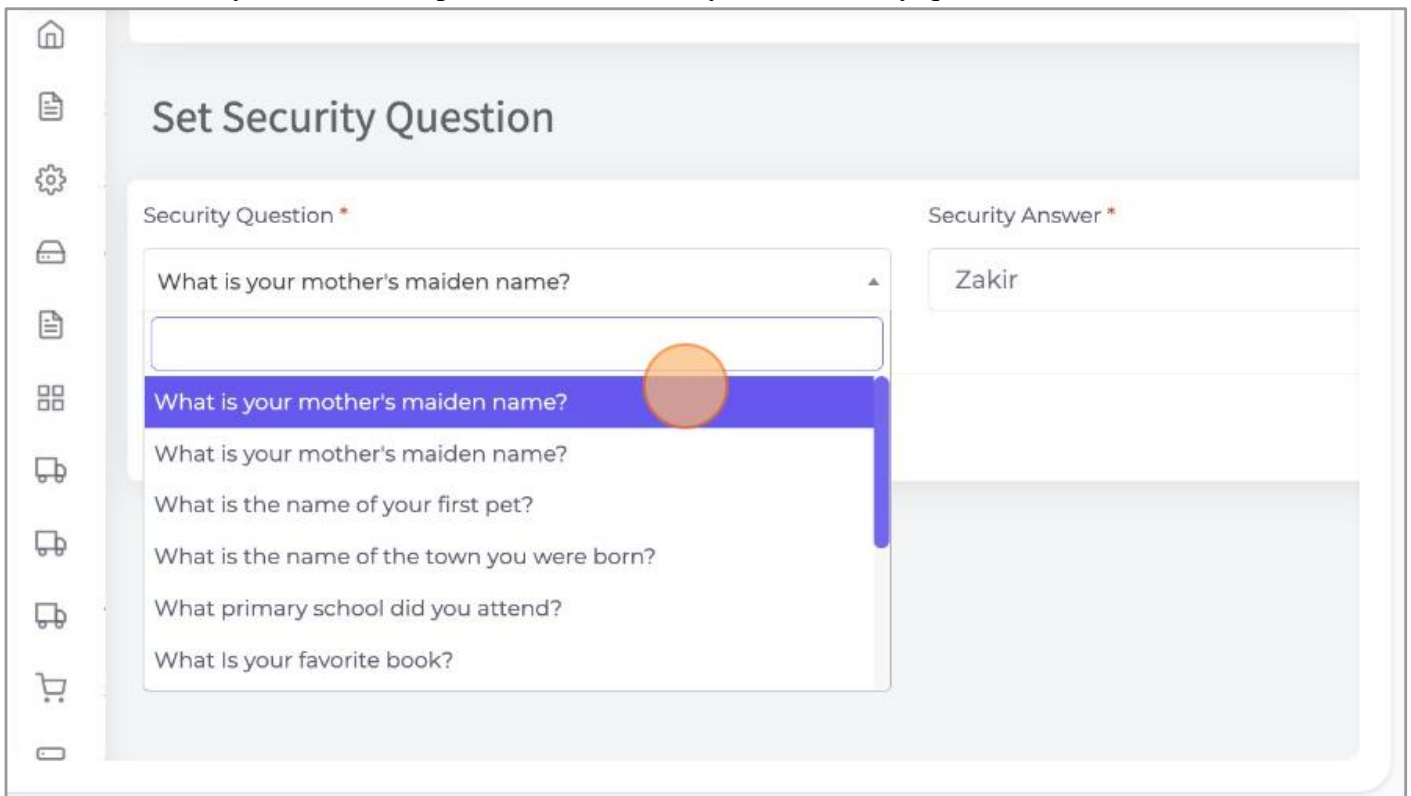

Please set a security question on your site by following the below instructions. So that you can reset your password in case you forget it. Also if you are a newly added user, you will need to set a security question for you.

Go to the "Account and User" from the left menu and then click on "Set Security Question".

This screenshot shows a sidebar menu on the left with the following items: Account and User (expanded), Add Role, List Role, Add User, List User, Change Profile, Change Password, Change Pin, Logout, Set Security Question (highlighted with an orange circle), and Plugins. The main content area on the right contains a form with fields for 'Security Question' (with a dropdown menu), 'Security Answer' (with a text input), and a 'Submit' button. The 'Security Question' dropdown is currently open, showing a list of questions.

Click the "Security Question" drop-down and select any of the security questions.

This screenshot shows the 'Set Security Question' form. The 'Security Question' dropdown menu is open, displaying a list of questions: 'What is your mother's maiden name?', 'What is the name of your first pet?', 'What is the name of the town you were born?', 'What primary school did you attend?', and 'What is your favorite book?'. The first question, 'What is your mother's maiden name?', is highlighted with a blue bar and an orange circle. The 'Security Answer' field on the right contains the text 'Zakir'.

Click the "Security Answer" field. Enter the answer to the question.

## 2.9. Forgot Password

In case you forgot your password, you can set a new password without any email or verification, you just need to follow some steps with the security question that you set before from the admin panel.

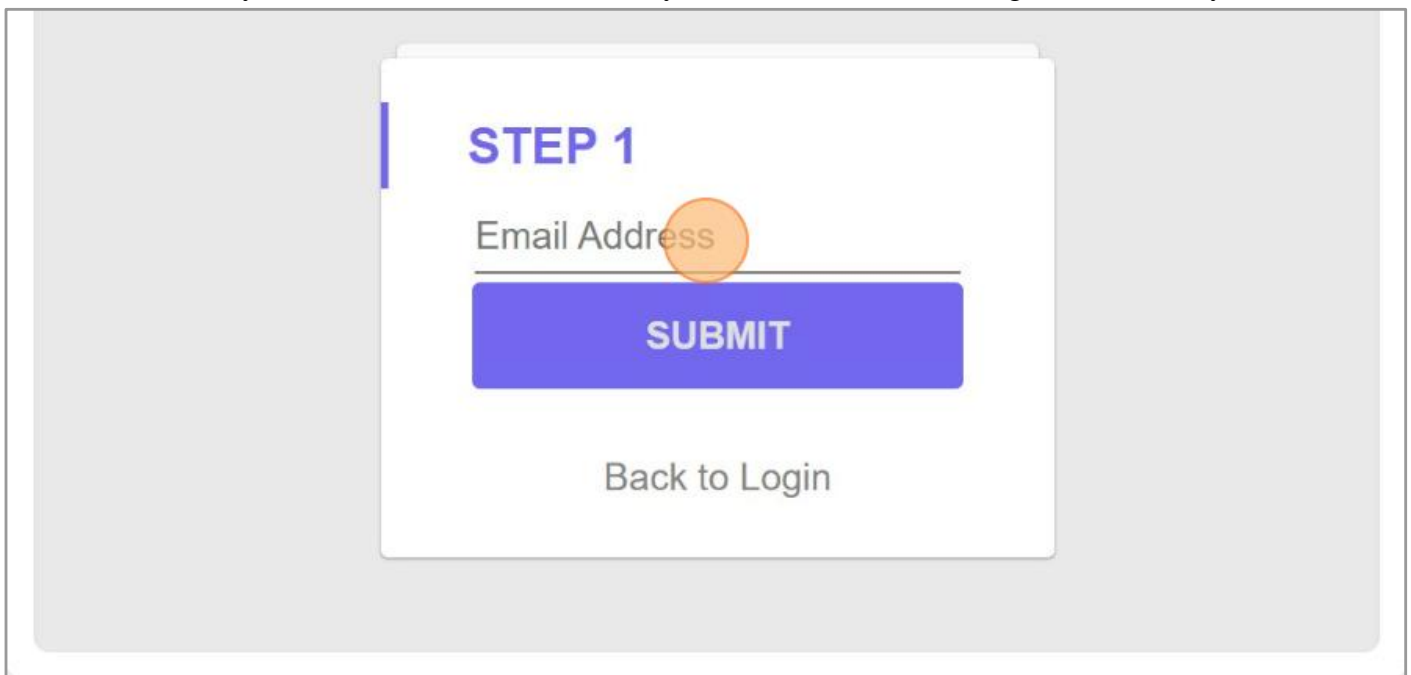

Click "Forgot Password?"

The screenshot shows a login interface with two tabs at the top: "Default" (selected) and "Login using Pin". Below the tabs is a "LOGIN" form. The form has two input fields: "Email Address" with the value "admin@doorsoft.co" and "Password" with masked characters "\*\*\*\*\*". Below the password field is a blue "LOGIN" button. At the bottom of the form is a link "Forgot Password?" which is highlighted with an orange circle.

STEP 1:

You need to enter your email address to check that your "Email Address" is registered in the system.

The screenshot shows a "STEP 1" screen for the forgot password process. It has a title "STEP 1" and a label "Email Address" above a text input field. Below the input field is a blue "SUBMIT" button, which is highlighted with an orange circle. At the bottom of the screen is a link "Back to Login".

Click "SUBMIT"

## 3. Settings

### 3.1. White Label

To change your site name, footer, and site logo please follow the below instruction.

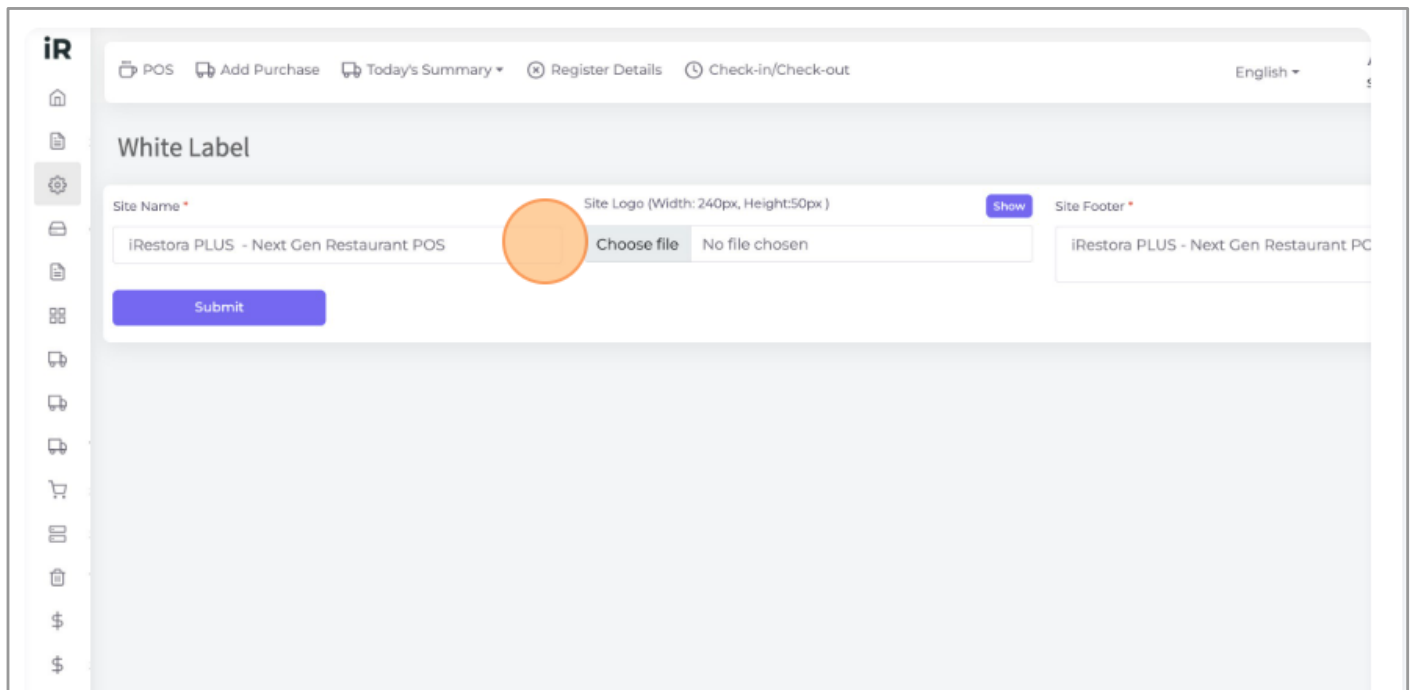

Go to the left menu and click on the "Settings" menu.

The screenshot shows the 'Door Shop' interface. On the left, a sidebar menu has 'Settings' highlighted with a red box, and 'White Label' is listed as a sub-option. The main content area is titled 'White Label' and contains three input fields: 'Site Name' (with the text 'iRestora PLUS - Next Gen Restaurant POS'), 'Site Logo (Width: 240px, Height: 50px)' (with a 'Choose File' button and 'No file chosen' text), and 'Site Footer' (with the text 'iRestora PLUS - Next Gen Restaurant POS'). A blue 'Submit' button is located below the 'Site Name' field. The top navigation bar includes links for POS, Add Purchase, Today's Summary, Register Details, and Check-in/Check-out, along with a language dropdown set to 'English' and a user profile for 'Admin User Super Admin'.

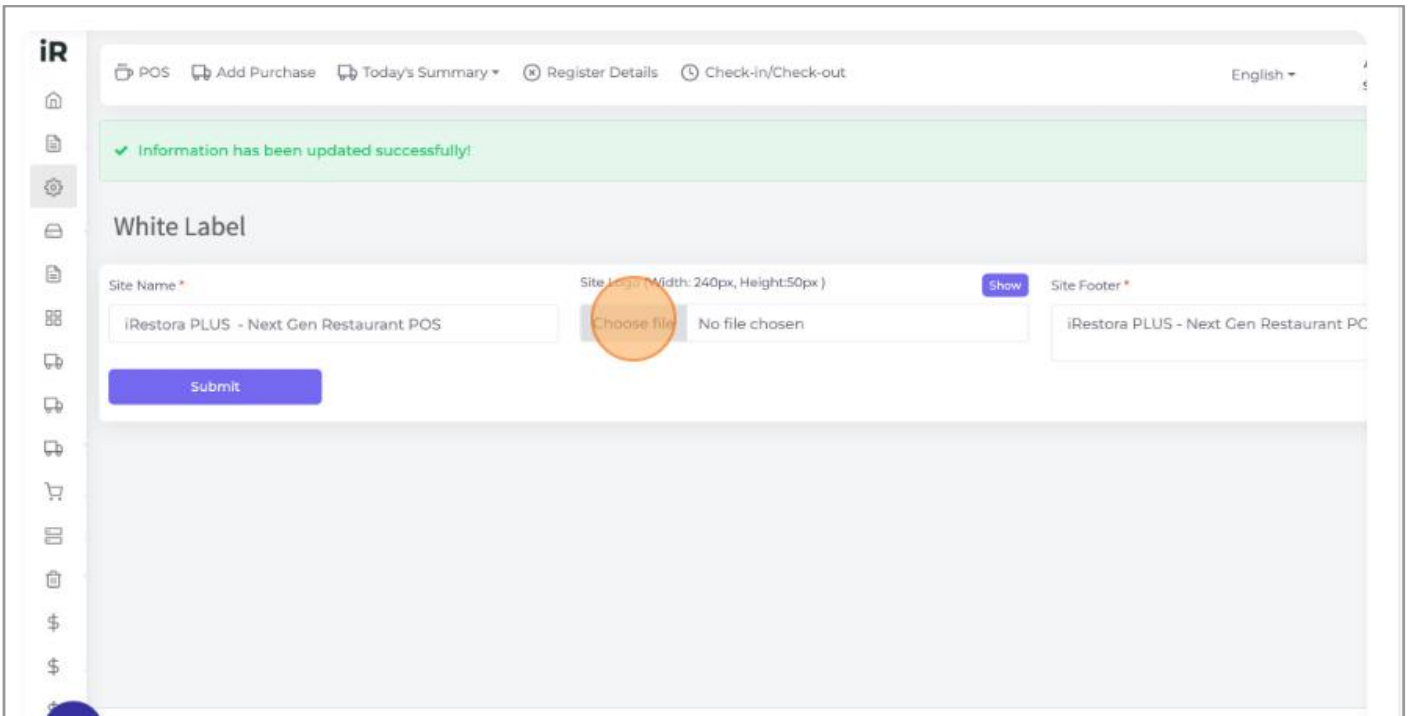

Then click on the "White Label" submenu.

Click the "Site Name" field and enter your site name here.

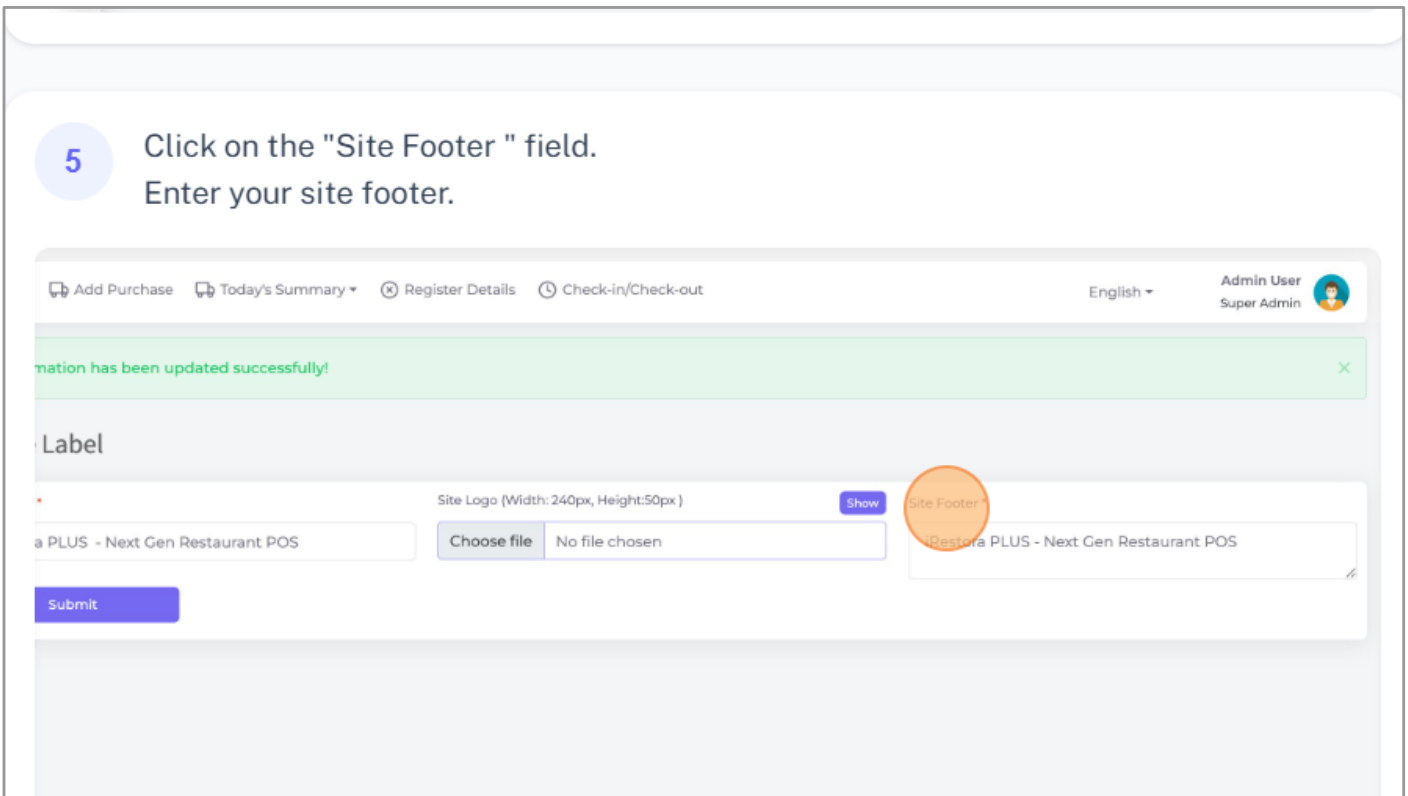

This screenshot is a closer view of the 'White Label' settings page. The 'Site Name' input field, which contains 'iRestora PLUS - Next Gen Restaurant POS', is highlighted with an orange circle. The 'Site Logo' field and 'Site Footer' field are also visible. The 'Submit' button is at the bottom left of the form area. The top navigation bar and sidebar are partially visible, showing the 'iR' logo and various system icons.

Click on the "Site Logo" field. Choose your site logo from your pc but remember that the logo should be in this size: Width: 230px, Height: 50px.

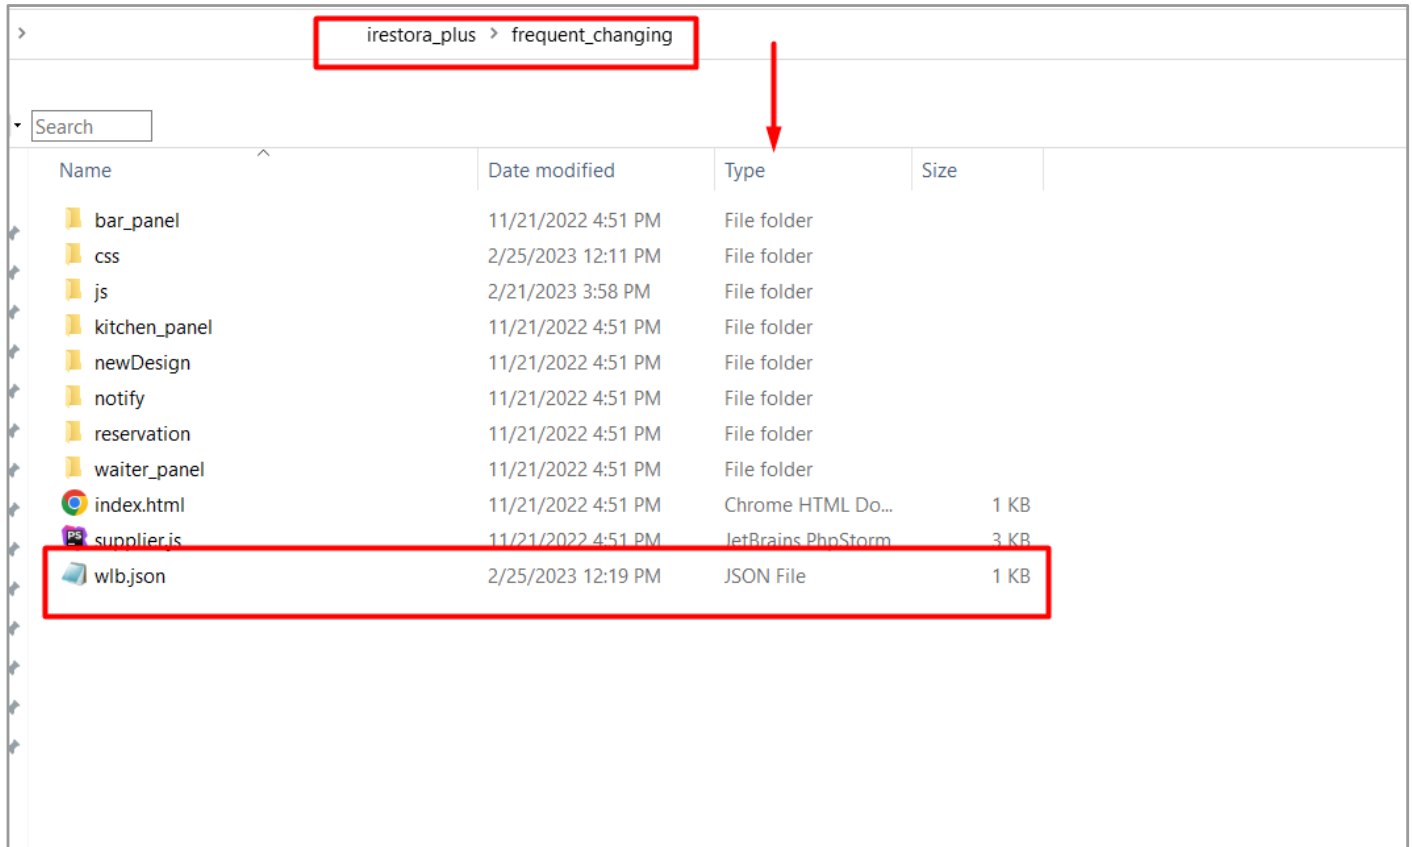

Click on the "Site Footer " field. Enter your site footer.

Click on the "Submit" button to update the changes on your site.

If you want you can hide the menu of "White Label" from the menu bar. Go to your database and follow the screenshot below. Go to project\_root\_path/frequent\_changing/ and find wlb.json file then open and put 0 in

the value. The menu will be hidden from the menu bar. 1 for showing the menu.

## 3.2. Settings

You will need to set up your software settings first as per your need. To do so, please follow the below steps.

Go to "Settings" from the left menu, and then click on "Settings".

When clicking on an item in POS: In this field, if you click "Show Options" and

if the item exists in the cart in POS then the system will show a modal for show options, and if clicking "Don't Show Options" the system will increase the quantity for the same item in the cart in POS. Please check the next step for more detail

If you choose "Show Options" from "Settings" it will show a modal like this when adding any item to the cart. Here you can add any note or give a discount by using this field on this modal. Also, you can select applicable Modifiers too.

Also can increase or decrease item quantity by clicking the plus or minus (+/-) button.

If you select "Don't Show Options" from the setting it will not show any options when clicking any item to add to the cart. If clicking multiple times item quantity will increase in the cart. See below how it works in POS.

Default Order Type: Here you can see three types of orders, if you select any order type it will be selected by default in the POS screen always.

This screenshot shows a vertical settings panel on the left side of the POS interface. The panel includes a sidebar with icons for different functions: a truck for delivery, a shopping cart for orders, a document for invoices, a trash can for deletions, and dollar signs for financial settings. The main settings area includes:

- Precision:** A dropdown menu set to "3 Digit".
- Default Order Type:** A dropdown menu with options "Dine In", "None", "Take Away", and "Delivery". "Dine In" is currently selected and highlighted in blue.
- Loyalty Point Rate:** A text input field containing "0.5".
- Invoice Footer:** A text input field.
- Decimals Separator:** A dropdown menu set to "Dot(.)".
- Default Delivery Partner:** A dropdown menu set to "None".
- Food Menu Tooltip(in POS):** A dropdown menu set to "Show".
- Delivery Charge (eg:10% or 10):** A text input field containing "5".

**Default Delivery Partner:** You can select default delivery partner here and system will consider the price for this delivery partner default, we will discuss later details

This screenshot shows the "Setting" page of the POS system. The page has a top navigation bar with links to "POS", "Add Purchase", "Today's Summary", "Register Details", and "Check-in/Check-out". The main content area is divided into several sections for configuration:

- Restaurant Name:** "Door Shop"
- Business Short Name:** "iR"
- Invoice Logo:** A "Choose file" button with "No file chosen" text.
- Website:** "doorsoft.co"
- Date Format:** "D/M/Y"
- Time Zone:** "Asia/Dhaka"
- Currency Symbol:** "\$"
- Currency Position:** "Before Amount"
- Precision:** "3 Digit"
- Decimals Separator:** "Dot(.)"
- Thousands Separator:** "Comma(,)"
- When clicking on item in POS:** "Don't Show Options"
- Default Order Type:** "Dine In"
- Default Delivery Partner:** "None" (highlighted with a red box)
- Default Customer:** "Walk-in Customer"
- Default Payment Method:** "Cash"
- Place Order Tooltip(in POS):** "Show"
- Food Menu Tooltip(in POS):** "Show"
- SMS Send Auto(in final invoice):** "Yes"
- Pre or Post Payment:** "Post Payment"
- Service Charge (eg:10% or 10):** "10"
- Delivery Charge (eg:10% or 10):** "5"
- Loyalty Point:** "Enable"
- Minimum Loyalty Point to Redeem:** "40"
- Loyalty Point Rate:** "0.5"
- Invoice Footer:** "Thank you for visiting us!"

A "Submit" button is located at the bottom of the settings page.

**Default Customer:** Here you can see your customers if you select any of them it will be selected by default in the POS screen always.

The screenshot shows the 'Add Purchase' form with various fields for business and payment settings. The 'Default Customer' dropdown menu is open, showing a list of customer names: 'Walk-in Customer', 'Mr. Jamil', 'Zaikk', 'Jomir Vai', 'Showroav', 'Monir Khan6666', and 'Walk-in Customer' (repeated at the bottom). An orange circle highlights the dropdown menu.

Fields visible in the form include:

- Business Short Name: iR
- Time Zone: Asia/Dhaka
- Decimals Separator: Dot(.)
- Thousands Separator: Comma(,)
- Default Delivery Partner: None
- Food Menu Tooltip(in POS): Show
- Delivery Charge (eg:10% or 10): 5
- Invoice Logo: Choose file (No file chosen)
- Currency Symbol: \$
- Currency Position: Before Amount
- When clicking on item in POS: Don't Show Options
- Default Payment Method: Cash
- Pre or Post Payment: Post Payment
- Minimum Loyalty Point to Redeem: 40

**Default Payment Method:** Here select any payment method which you want to choose as a default payment method in your finalize sale screen. The selected Payment Method will always be selected by default in the finalize sale screen.

The screenshot shows the 'Add Purchase' form with the 'Default Payment Method' dropdown menu open. The dropdown menu shows a list of payment methods: 'Cash', 'Credit Card', 'Check', and 'Bank Transfer'. An orange circle highlights the dropdown menu.

Fields visible in the form include:

- Business Short Name: iR
- Time Zone: Asia/Dhaka
- Decimals Separator: Dot(.)
- Thousands Separator: Comma(,)
- Default Delivery Partner: None
- Food Menu Tooltip(in POS): Show
- Delivery Charge (eg:10% or 10): 5
- Invoice Logo: Choose file (No file chosen)
- Currency Symbol: \$
- Currency Position: Before Amount
- When clicking on item in POS: Don't Show Options
- Default Customer: Walk-in Customer
- SMS Send Auto(in final invoice): Yes
- Loyalty Point: Enable

**Place Order Tooltip(in POS):** It's a Tooltip for the "Place Order" button in POS which is shown when hovering the mouse on the button. You can hide or show this tooltip by selecting it here.

**Service Charge (eg:10% or 10):** Service charge will be effective on the POS screen. You can set your default service charge, the system automatically calculates this service charge on the POS screen for every Dine-in type invoice, if you don't want to set default then keep it blank.

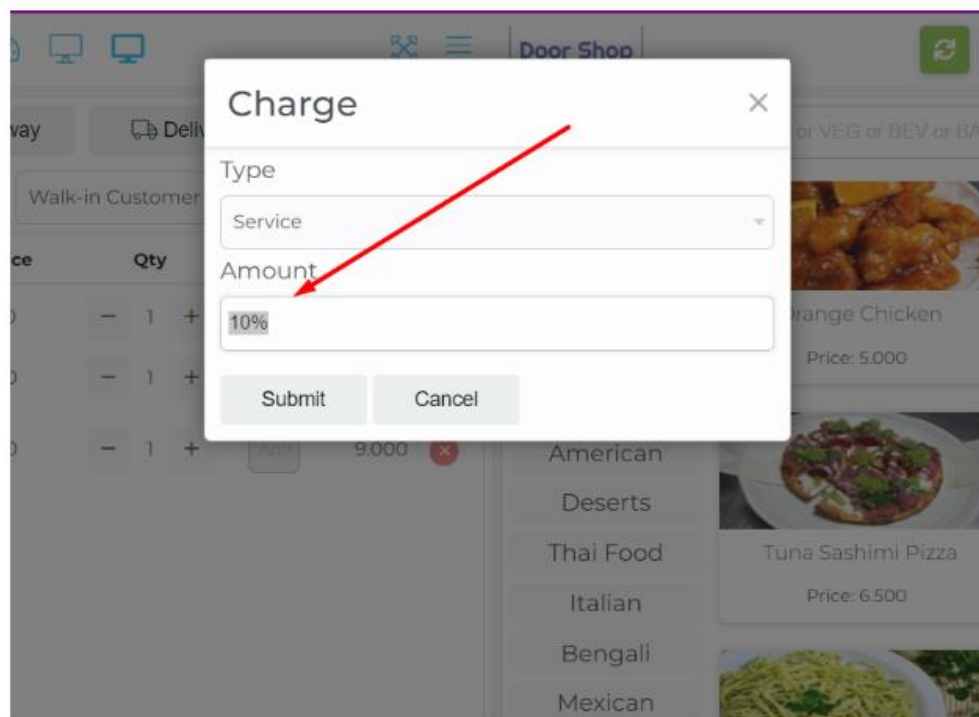

Here in the POS screen add some items to the cart then click on the icon for checking the applied charge.

Here 1.800 charge was applied automatically from the setting 10% service charge, you may change this default amount. Click on the "Charge" button.

The system automatically applied the default 10% service charge here.  
If you want you can change this default charge from here.

Here you can see the total payable price increased from the previous price because the charge is now included here.

Now place the order and sell it.

**Delivery Charge (eg:10% or 10):** In case you have a default delivery charge for Delivery type orders in percentage or flat amount then you can set that here and that will be reflected automatically in the POS.

Delivery charge will affect the POS screen, if you set your default delivery charge, the system automatically calculates this delivery charge on POS screen for every Delivery type invoice, if you don't want to set default then keep it blank.

## Setting

Restaurant Name *	Restaurant Short Name *	Invoice Logo
<input type="text" value="Door Shop"/>	<input type="text" value="iR"/>	<input type="button" value="Choose File"/> <input type="button" value="No file chose"/>
Date Format *	Time Zone *	Currency Symbol *
<input type="text" value="D/M/Y"/>	<input type="text" value="Asia/Dhaka"/>	<input type="text" value="\$"/>
Precision *	Decimals Separator *	Thousands Separator *
<input type="text" value="3 Digit"/>	<input type="text" value="Dot(.)"/>	<input type="text" value="Dot(.)"/>
Default Order Type ?	Default Delivery Partner	Default Customer *
<input type="text" value="Dine In"/>	<input type="text" value="None"/>	<input type="text" value="Walk-in Customer"/>
Place Order Tooltip(in POS) *	Food Menu Tooltip(in POS) *	SMS Send Auto(in final invoice)
<input type="text" value="Show"/>	<input type="text" value="Show"/>	<input type="text" value="Yes"/>
Service Charge (eg:10% or 10) ?	Delivery Charge (eg:10% or 10) ?	
<input type="text" value="10%"/>	<input type="text" value="15%"/>	
Loyalty Point ?	Minimum Loyalty Point to Redeem *	Loyalty Point Rate * ?
<input type="text" value="Enable"/>	<input type="text" value="40"/>	<input type="text" value="0.5"/>

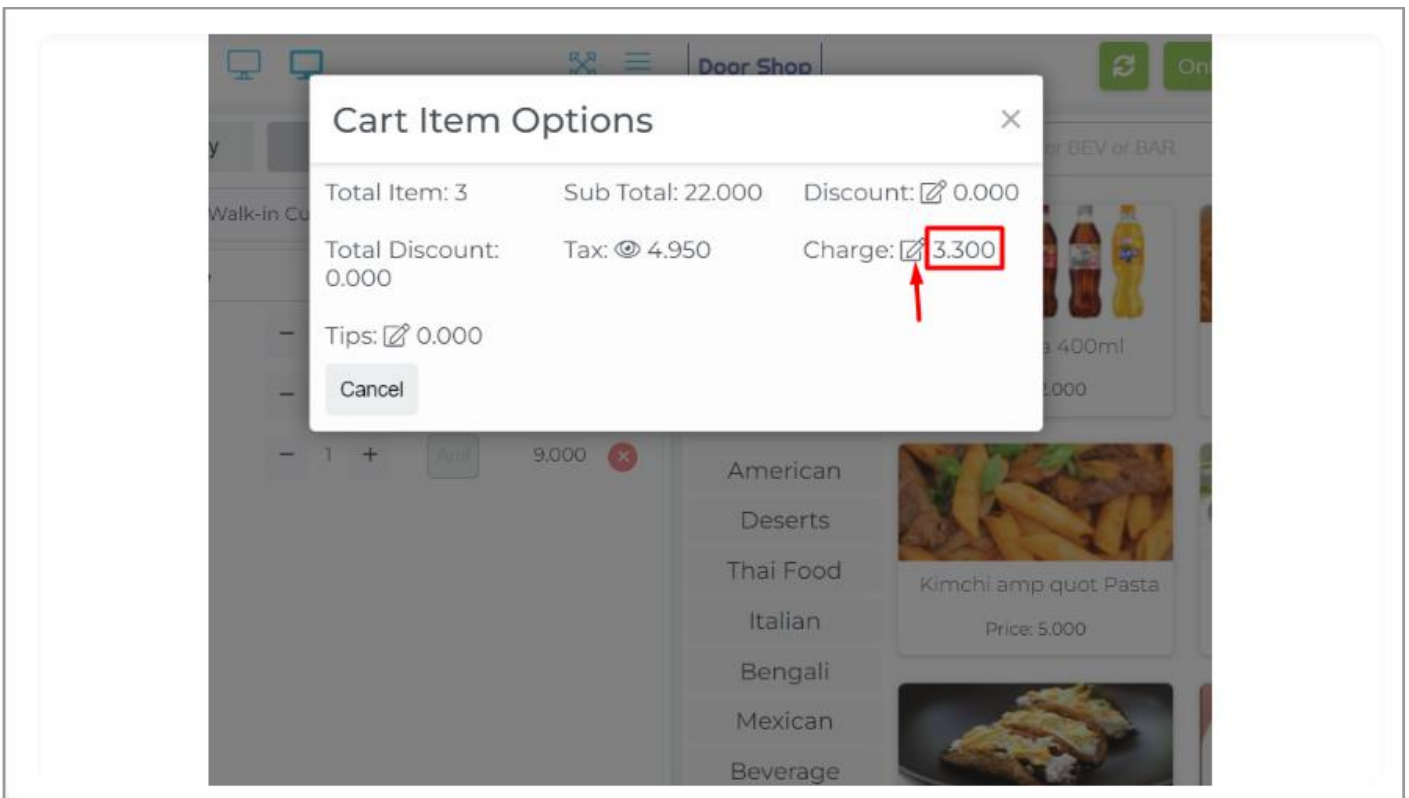

Here in the POS screen add some items to the cart then click on the icon for checking the applied charge.

The screenshot shows the POS interface for 'Door Shop'. The 'Delivery' tab is selected. The cart contains three items:

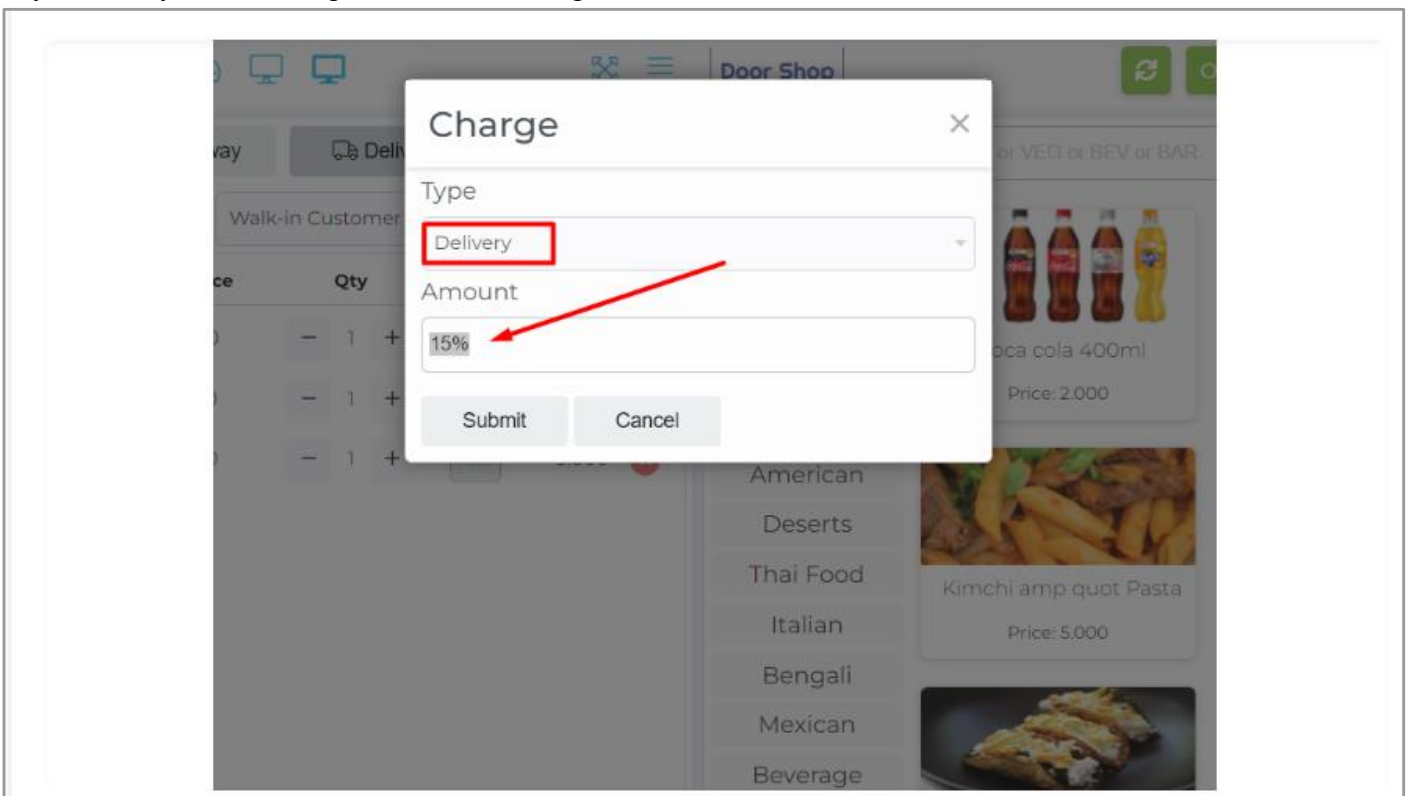

Item	Price	Qty	Discount	Total
Black Pepper Beef	8.000	1	Nil	8.000
Kimchi amp quot Pasta	5.000	1	Nil	5.000
Shrimp Toast	9.000	1	Nil	9.000

The total payable is 30.250. A red box highlights the 'Delivery' tab and the 'Total Payable' section. A red arrow points from the 'Delivery' tab to the 'Total Payable' section.

Here the 3.300 charge was applied automatically from the setting 15% delivery charge, you may change this default amount. Click on the "Charge" button.

The system automatically applied the default 15% delivery charge here.  
If you want you can change this default charge from here.

Here you can see the total payable price increased from the previous price because the charge is now included here.

Note: You must select a customer that has at least one delivery address, without a delivery address you will not be able to place an order for delivery type order.

Now place the order and sell it.

### 3.3. Tax Setting

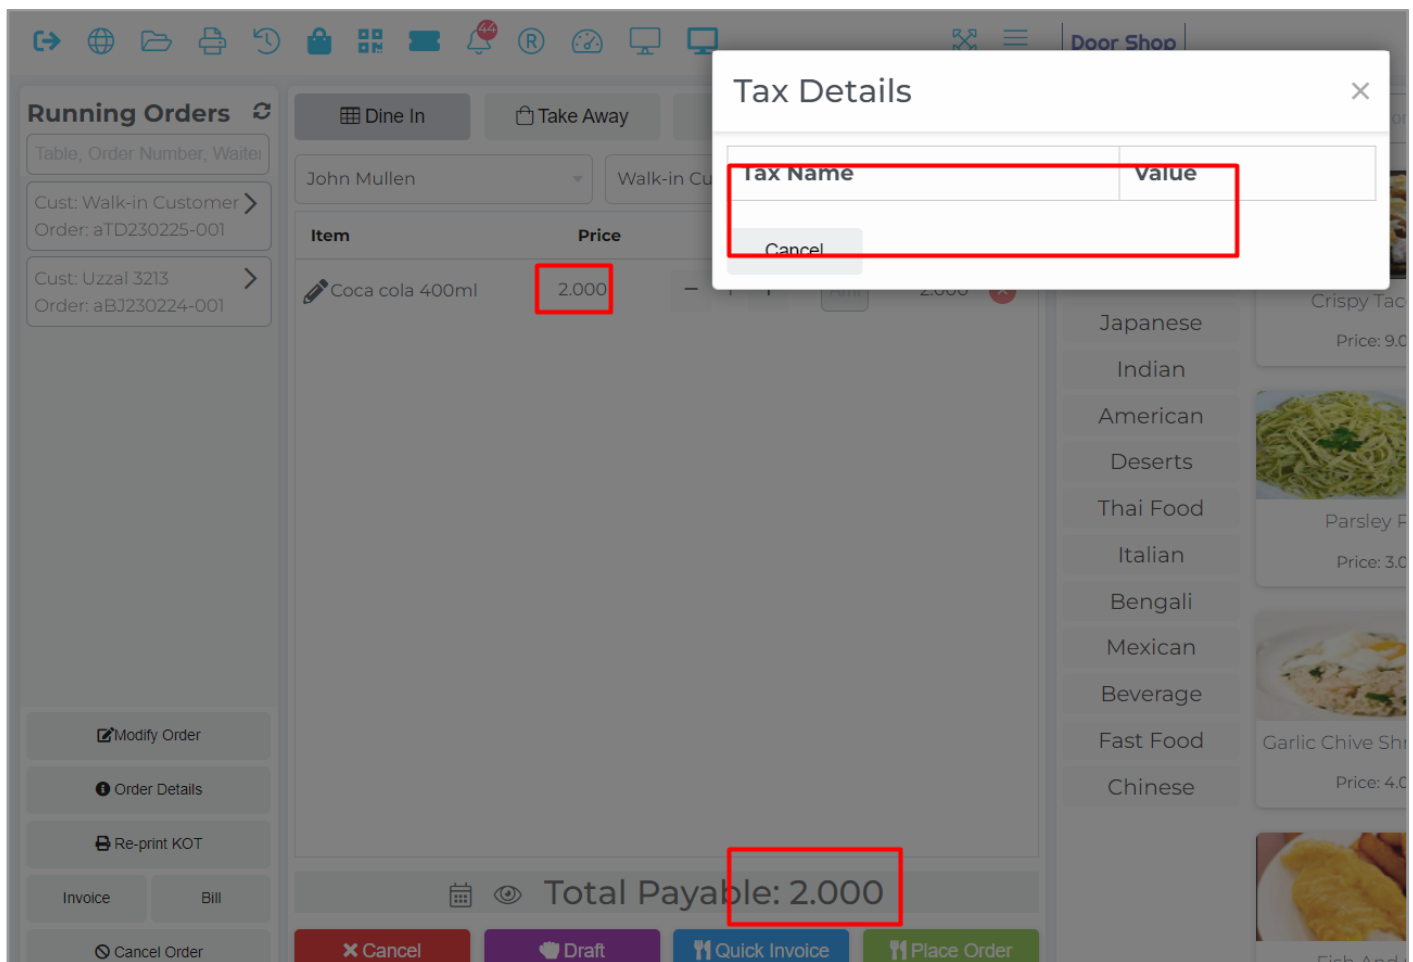

The tax system of this software works like you can have multiple fields of taxes. You can add all of those fields in your Tax Setting along with their rate. And later all of those will be populated when adding an item but you can change the rate there too if the tax rate is different for a specific item.

First of all, in Tax Setting “I Collect Tax”, if you select No then the system will not consider tax related any operation in the software.

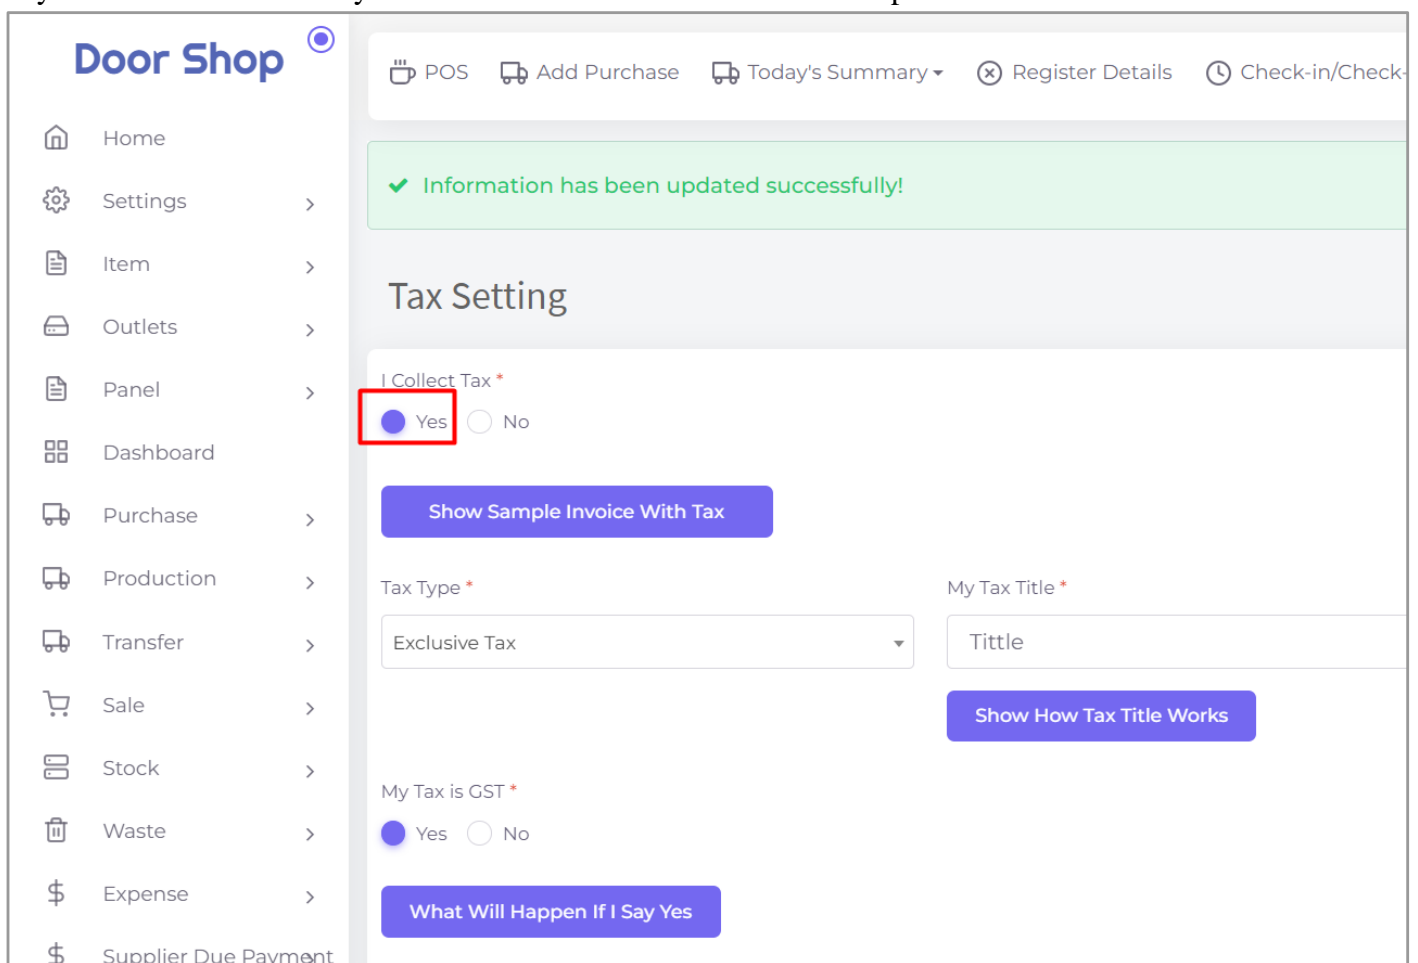

The screenshot displays the 'Door Shop' application interface. On the left, a sidebar menu lists various settings, with 'Tax Setting' highlighted. The main content area is titled 'Tax Setting'. It features a form with a section labeled 'I Collect Tax \*'. Below this label, there are two radio button options: 'Yes' and 'No'. The 'No' option is selected, and this selection is highlighted with a red rectangular box. At the bottom of the form, there are two buttons: 'Submit' and 'Back'.

In the POS screen if we add an item in the cart then the system will consider only food menu price, no tax here due to setting.

If you select Yes then the system will consider the tax related to all operations in the software.

Tax type “Exclusive Tax ” - The tax type “Exclusive” means your food price contains without tax amount and the system will consider the tax from the unit price of the food menu.

The screenshot shows a restaurant management interface. On the left, under 'Running Orders', there are two customer orders: 'Cust: Walk-in Customer' (Order: aTD230225-001) and 'Cust: Uzzal 3213' (Order: aBJ230224-001). The main area shows a 'Dine In' order for 'John Mullen' with a 'Walk-in Customer' note. The item list shows 'Coca cola 400ml' with a price of 2.000, which is highlighted with a red box. A 'Tax Details' modal is open, showing a table of taxes: VAT (0.3), CGST (0.05), SGST (0.05), and IGST (0.05). The values 0.3, 0.05, 0.05, and 0.05 are highlighted with a red box. A red arrow points from this box to the 'Total Payable: 2.450' at the bottom of the screen. The bottom bar contains buttons for 'Cancel', 'Draft', 'Quick Invoice', and 'Place Order'.

Tax Name	Value
VAT	0.3
CGST	0.05
SGST	0.05
IGST	0.05

Total Payable: 2.450

Here the main price was 2 but after tax added Total Payable is 2.450.

My Tax is GST: If you are from India and your tax type is GST then enable it and fillup respective fields. In that case you will get some default tax fields like CGST, SGST, IGST and VAT. Then the tax in the software will be calculated based on Indian GST tax rules.

### 3.4. Payment Method

The payment method is something that you will use to collect the payment from a customer. Like cash, card, bank account, etc. You will even pay your supplier for any of these.

Go to "Settings" from the left menu, and then click on "Add Payment Method".

iRestora PLUS - Next Gen Restaurant POS

In your outlet dashboard, you can see your sales report used by the payment methods and also can see how many sales are made using every payment method.

Also you will need to select a payment method in Supplier Due Payment and Customer Due Receive too.

### 3.5. Denomination

It means notes of your currency like 5, 10, 20 dollar notes. Adding your denominations your bill collections get faster.

Go to "Settings" from the left menu, and then click on "Add Denomination".

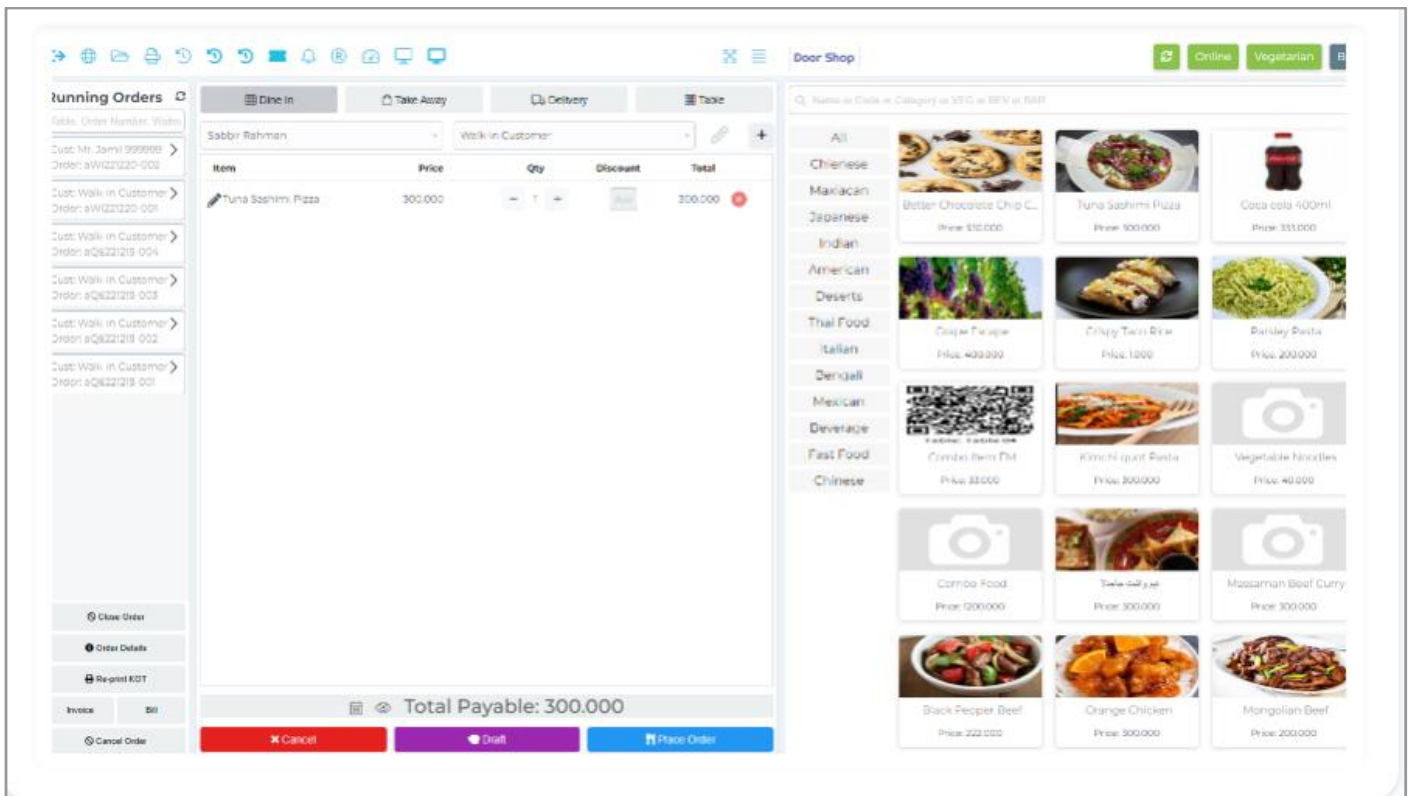

Amount: In this field, you can enter the amount which will show in the POS screen and also can enter a description in the "Description" field.

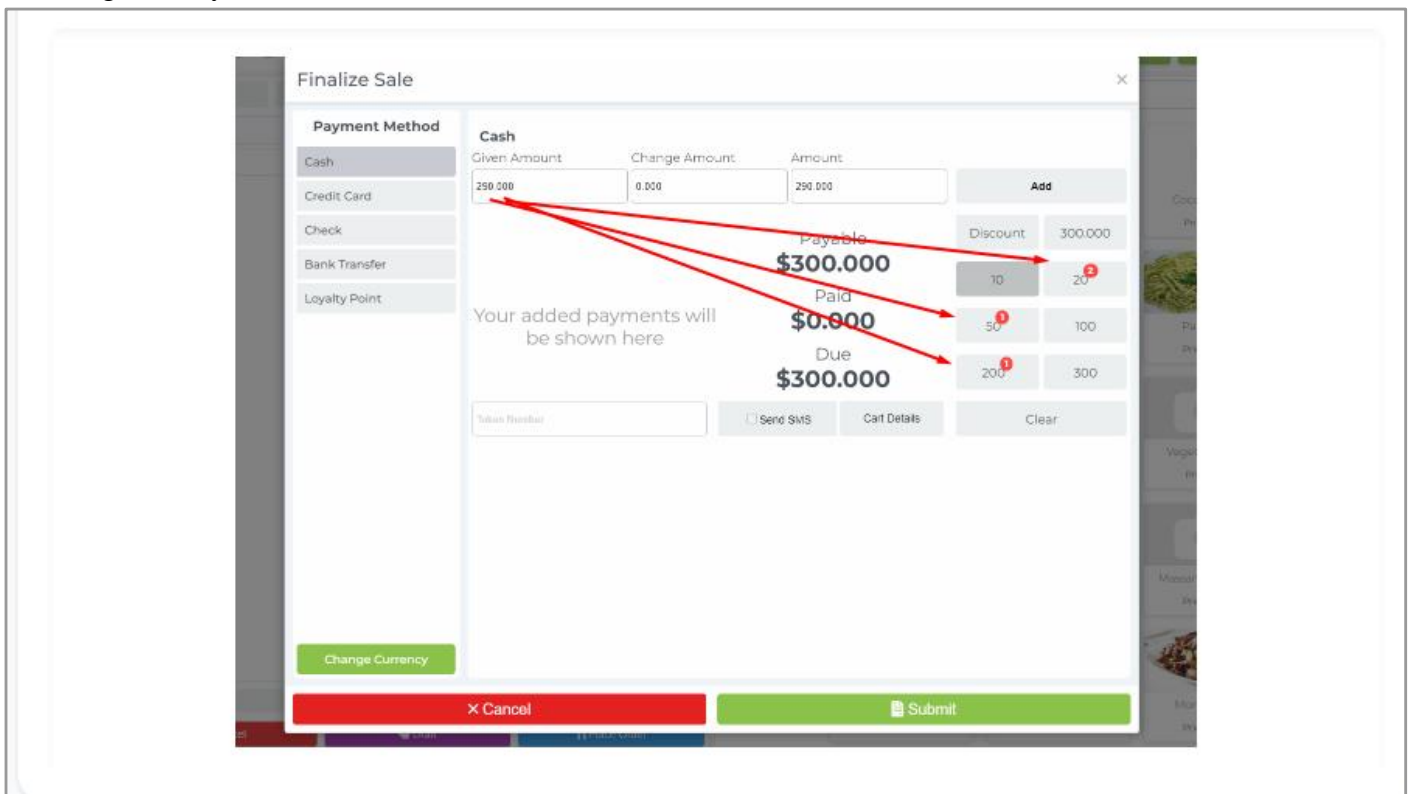

A screenshot of the 'Add Denomination' form in a web application. The form has a light gray header with the title 'Add Denomination'. Below the header, there are two input fields: 'Amount \*' and 'Description'. The 'Amount \*' field contains the number '10'. The 'Description' field is empty and has a placeholder text 'Description'. Below the input fields, there are two blue buttons: 'Submit' and 'Back'. The 'Submit' button is highlighted with an orange circle. On the left side of the form, there is a vertical sidebar with several icons: a document, a gear, a server, a document, a grid, a truck, a truck, a truck, a shopping cart, and a mobile phone.

Click "Submit" to add this amount in the denomination on the POS screen.

Go to the POS screen and select an item and sell it. At Finalize sale the denomination price will show.

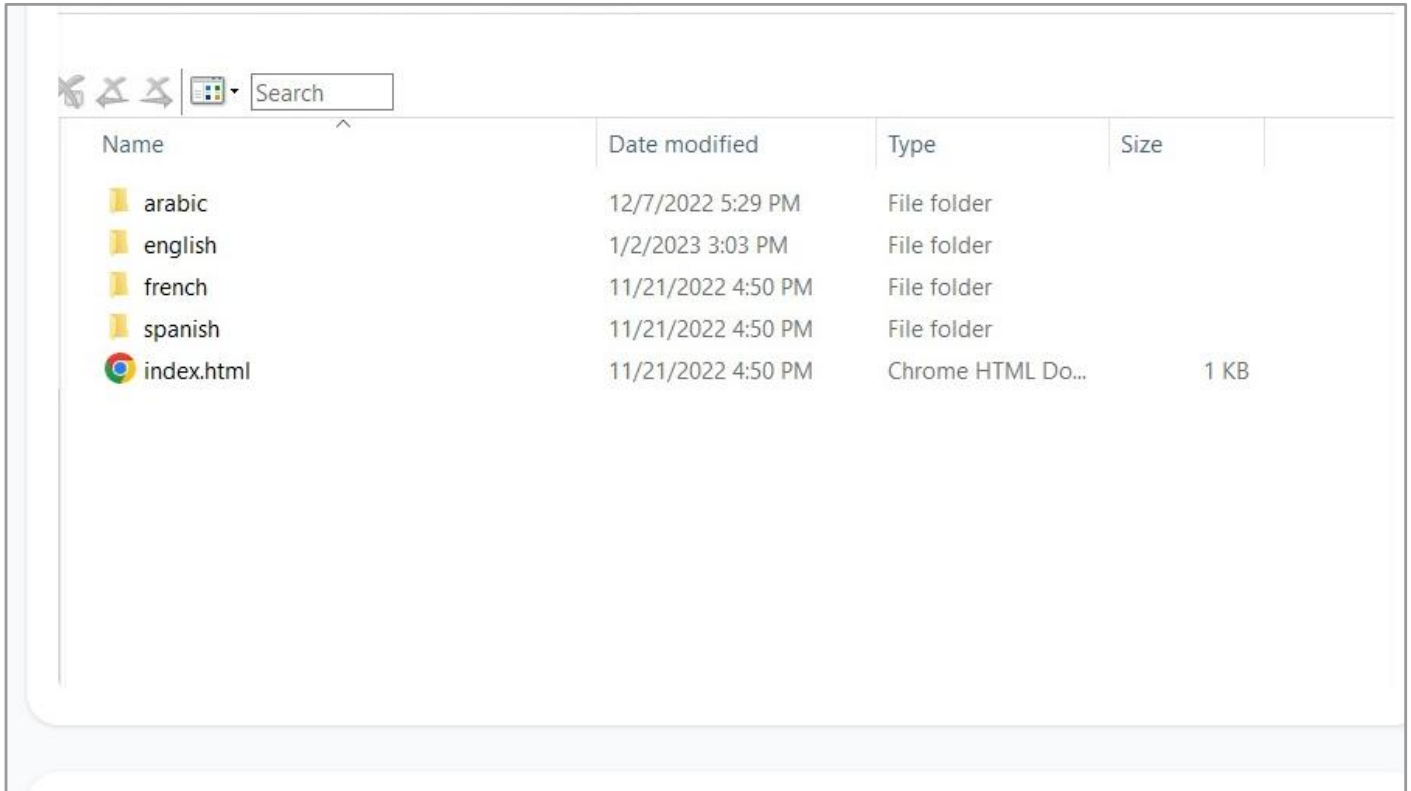

Here we can see your denomination-added amount. It will help as a shortcut by clicking this amount, it will add in a given amount for that reason sometimes you do not need to type the given amount you can add by selecting it easily.

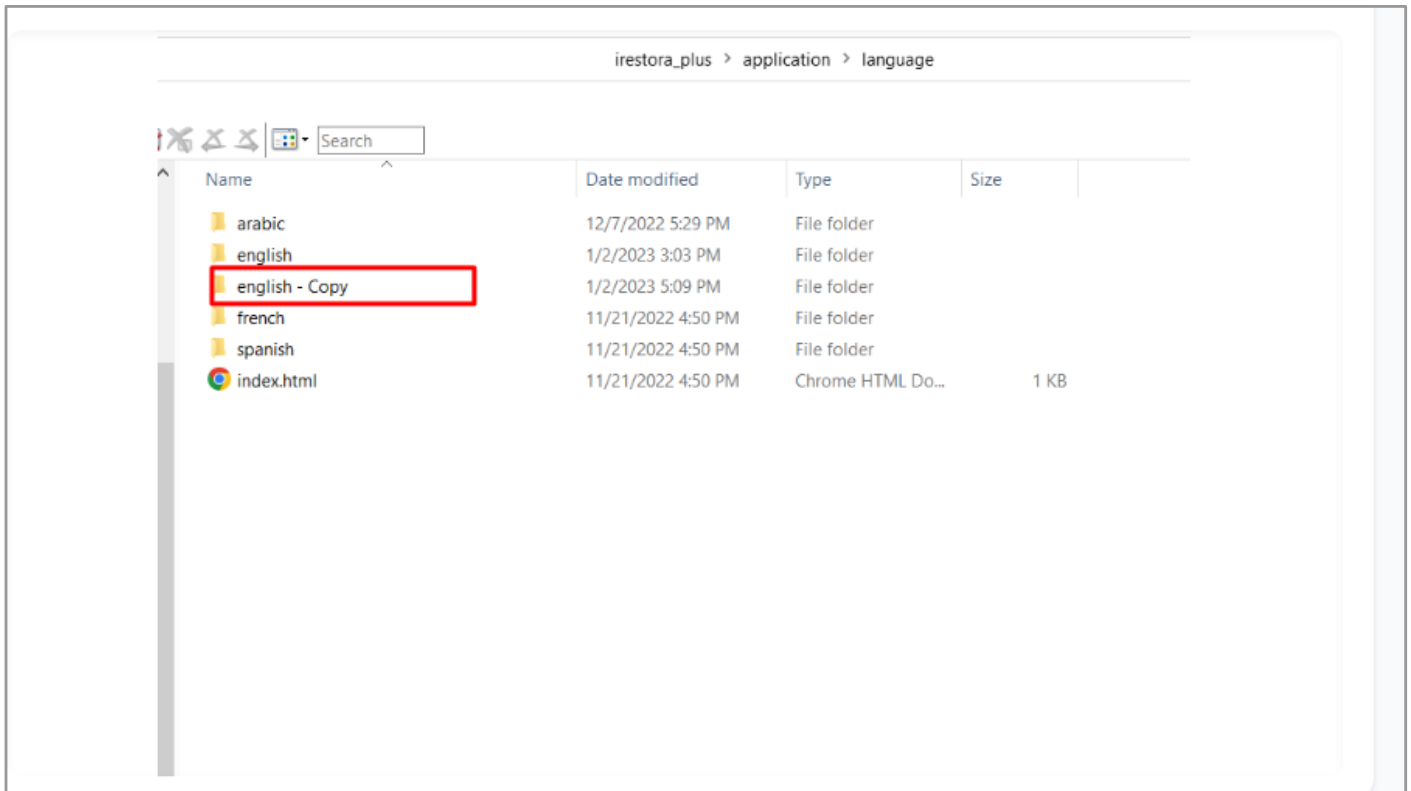

### 3.6. Add new language, modify language words

Go to your project with that following path application/language/

Copy the english languages folder and rename the folder by your desired language name e.g: tamil

Change file name with same folder name. After renaming the file.

Name	Date modified	Type	Size
3_lang.php	11/21/2022 4:50 PM	JetBrains PhpStorm	0 KB
form_validation_lang.php	11/21/2022 4:50 PM	JetBrains PhpStorm	0 KB
index.html	11/21/2022 4:50 PM	Chrome HTML Do...	1 KB
rest_controller_lang.php	11/21/2022 4:50 PM	JetBrains PhpStorm	1 KB
tamil_lang.php	1/2/2023 3:03 PM	JetBrains PhpStorm	74 KB

Now open the file in a text editor like Notepad++ or Sublime Text and change it by following the screenshot. You can download this editor front the following link: [www.sublimetext.com](http://www.sublimetext.com)

```

1 <?php
2 $lang['enter'] = 'உள்ளிடவும்';
3 $lang['view_details'] = 'விபரங்களை பார்க்க';
4 $lang['edit'] = 'தொகு';
5 $lang['add'] = 'கூட்டு';
6 $lang['delete'] = 'அழி';
7 $lang['address'] = 'முகவரி';
8 $lang['phone'] = 'தொலைபேசி';
9 $lang['started_date'] = 'தொடங்கிய தேதி';
10 $lang['yes'] = 'ஆம்';
11 $lang['no'] = 'இல்லை';
12 $lang['submit'] = 'சமர்ப்பிக்கவும்';
13 $lang['back'] = 'மீண்டும்';
14 $lang['alert'] = 'எச்சரிக்கை';
15 $lang['are_you_sure'] = 'நீ சொல்லு உறுதியாக';
16 $lang['sn'] = 'எஸ்.என்';
17 $lang['actions'] = 'செயல்கள்';
18 $lang['ok'] = 'சரி';
19 $lang['cancel'] = 'ரத்து செய்';
20 $lang['insertion_success'] = 'தகவல் வெற்றிகரமாக சேர்க்கப்பட்டது!';
21 $lang['update_success'] = 'தகவல் வெற்றிகரமாக புதுப்பிக்கப்பட்டது!';
22 $lang['delete_success'] = 'தகவல் வெற்றிகரமாக நீக்கப்பட்டது!';
23 $lang['please_click_green_button'] = 'ஒரு கடைபிடி Enter பொத்தானைக் கிளிக் செய்யவும்';
24 $lang['register_not_open'] = 'பதிவு திறக்கப்படவில்லை, உங்கள் தொடக்க இருப்பை உள்ளிடவும்!';
25 $lang['user_not_active'] = 'பயனர் செயலில் இல்லை';
26 $lang['outlet_not_active'] = 'அவுடலெட் செயலில் இல்லை';
27 $lang['incorrect_email_password'] = 'தவறான மின்னஞ்சல்/கடவுச்சொல்';
28 $lang['password_changed'] = 'கடவுச்சொல் வெற்றிகரமாக மாற்றப்பட்டது!';
29 $lang['old_password_not_match'] = 'பழைய கடவுச்சொல் பொருத்தவில்லை!';
30 $lang['back'] = 'மீண்டும்';
31 $lang['RESTAURANT_SETTINGS'] = 'RESTAURANT_SETTINGS';

```

You need to change right side of content only as per your language

Finally save the file and run the software. You will find the newly added language in the change language dropdown.

but here is changed, so you need to complete all of content

## 4. Outlet

Here the outlets are like your branches. If you have multiple business locations or branches **of the same restaurant** please manage those from here as outlets. Remind that any of your transactions must be associated with an outlet.

Go to "Outlet" from the left menu, and then click on "Add Outlet".

In the "Outlet Code" field you can enter any specific code for this outlet. Here enter your outlet name in the "Outlet Name" field. In the "Phone" field enter your outlet's mobile number. Here you also can input your outlet email address in the "Email" field. Input your outlet address in the "Address" field.

Select those food menus you want to sell from this outlet  
 Select All

DI = Dine In, TA = Take Away, De = Delivery

You may have hundreds of foods but don't want to sell all those food items from a specific outlet. In that case you can choose which food menus you want to sell from that outlet.

In this section select the food menus which you want to sell from this outlet, and these selected menus are shown on the POS screen.

If you want to sell all food menus then click "Select All" it will select all menus by one click.

Select those food menus you want to sell from this outlet  
☒ Select All

DI = Dine In, TA = Take Aw

Food Menu	Price (DI)	Price (TA)	Price (De)	UberEats	Foodpanda
<input checked="" type="checkbox"/> Beet And Onion Pickle Recipe	250	250		250	250
<input checked="" type="checkbox"/> Best Eggs Benedict	400			400	400
<input checked="" type="checkbox"/> Better Chocolate Chip Cookies	330			330	330
<input checked="" type="checkbox"/> Black Pepper Beef	222			350	350
<input checked="" type="checkbox"/> Burger	11	22		11	11
<input checked="" type="checkbox"/> Chicken fry	125	125		155	140

Here you also can select menus manually for which you want to sell at your outlet.

The screenshot shows the iR system interface for selecting food menus to sell from a specific outlet. The interface is divided into several sections, each representing a different food menu. Each menu section has a checkbox to select it, followed by input fields for setting prices for different outlets (Dine In, Take Away, and Delivery). The prices are pre-populated with values from a previous setup.

**Select those food menus you want to sell from this outlet**

☐ Select All

**DI = Dine In, TA = Take Away, De = Delivery**

Menu	Price(DI)	Price(TA)	Price(De)	UberEats	Foodpanda
<input checked="" type="checkbox"/> Beet And Onion Pickle Recipe	250	250		250	250
<input type="checkbox"/> Best Eggs Benedict	400	Price(TA)		400	400
<input checked="" type="checkbox"/> Better Chocolate Chip Cookies	330	Price(TA)		330	330
<input type="checkbox"/> Black Pepper Beef	222	Price(TA)		350	350
<input checked="" type="checkbox"/> Burger	11	22		11	11
<input type="checkbox"/> Chicken fry	125	125		155	140

In case you want to set a different price for different outlets, you can set menu-wise prices for Dine-in and Take Away. The price you have already set when adding a food menu will be pre populated here but you have the freedom to set a different price for any menu for this outlet.

Select the "Price(DI)" field and enter your Dine In type order price for this menu.

Select the "Price(TA)" field and enter your Take Away type order price for this menu.

Select the "Price(DE)" field and enter your Delivery type order price for this menu.

Here are some shortcuts you should know about this.

DI = Dine In, TA = Take Away, De = Delivery

DI = Dine In, TA = Take Away, De = Delivery

<input type="checkbox"/> <b>2:1 Lunch Combo Package</b> Price(DI) 35 Price(TA) 35 Price (De) Instacart 35 Tim Hortons 35 DoorDash 35 Grubhub 35 Uber Eats 35 Pathao Food Rider 35	<input checked="" type="checkbox"/> <b>Beet And Onion Pickle Recipe</b> Price(DI) 2 Price(TA) 2 Price (De) Instacart 2 Tim Hortons 2 DoorDash 2 Grubhub 2 Uber Eats 2 Pathao Food Rider 2	<input type="checkbox"/> <b>Best Eggs Benedict</b> Price(DI) 6 Price(TA) 6 Price (De) Instacart 6 Tim Hortons 6 DoorDash 6 Grubhub 6 Uber Eats 6 Pathao Food Rider 6
<input type="checkbox"/> <b>Better Chocolate Chip Cookies</b> Price(DI) 2	<input checked="" type="checkbox"/> <b>Black Pepper Beef</b> Price(DI) 8	<input checked="" type="checkbox"/> <b>Burger</b> Price(DI) 19

Finally, After submit - your selected food menus with price will be shown in POS.

### 5.3. Ingredient

Ingredients are the things you use to make a Food Menu. e.g: potato, beef, chili, onion, salt, etc.

Go to "Item" from the left menu, and then click on "Add Ingredients".

Click the "Name" field and enter here Ingredient name here which you want to add.

The "Code" field will auto-generate a code for the ingredient but you can enter a specific code that can be used to identify the ingredient quickly.

In "Category" select the category of this ingredient.

A screenshot of the 'Add Ingredient' form in the software. The form is titled 'Add Ingredient' and has a light gray background. It contains several input fields and dropdown menus. The 'Name' field is highlighted with an orange circle. The 'Code' field contains the value '144'. The 'Category' field is a dropdown menu with 'Select' highlighted with an orange circle. The 'Purchase Unit' field is a dropdown menu with 'Select' highlighted. The 'Consumption Unit' field is a dropdown menu with 'Select' highlighted. The 'Purchase Price' field is a text input field. The 'Cost Per Unit' field is a text input field. The 'Alert Qty' field is a text input field. At the bottom of the form, there are two buttons: 'Submit' and 'Back'. The form is part of a larger interface with a sidebar on the left containing various icons and a top navigation bar with links like 'POS', 'Add Purchase', 'Today's Summary', 'Register Details', and 'Check-in/Check-out'.

Purchase Unit: Select the unit that you use to buy/purchase this ingredient. Like you buy in KG.

Consumption Unit: Select the unit that you use when making food. Like you use in Pcs when making food.

**iR** POS Add Purchase Today's Summary Register Details Check-in/Check-out English

### Add Ingredient

Name \* Code \* Category \*

Purchase Unit \* Consumption Unit \* Conversion Rate \*

Purchase Price \* Cost Per Unit \* Alert Qty \*

Submit Back

**Conversion Rate:** Conversion Rate is How many Consumption Unit is equal to 1 Purchase Unit. Like you get 14 Pcs of cucumber in one Kg. So Your purchase unit is Kg and Consumption unit is Pcs

**Purchase Price:** Enter here your ingredient purchase price(in purchase units).

**Cost Per Unit:** It will be auto-generated by this formula:  $\text{Purchase Price} / \text{Conversion Rate} = \text{Cost Per Unit}$ . That will help you to set the price for a food menu.

**iR** POS Add Purchase Today's Summary Register Details Check-in/Check-out English

### Add Ingredient

Name \* Code \* Category \*

Purchase Unit \* Consumption Unit \* Conversion Rate \*

Purchase Price \* Cost Per Unit \* Alert Qty \*

Submit Back

If your Purchase Unit and Consumption Unit both are the same like both are Pcs, then you need to select the same unit in both fields and put 1 in the Conversion Rate field.

**Alert Qty:** In case your Low Qty is 10Kg (in purchase unit) and your stock is 9Kg then the system will show this ingredient as red marked. That means this ingredient is under low Qty.

## 5.6. Food Menu

Food Menus are the items you sell from your restaurant. Here you can manage your food menus and also you can define associated ingredients along with the amount to prepare that food.

Also can calculate the cost of making the food so that you can set the price of the food menu and all other things like tax, photo, etc.

Go to "Item" from the left menu, and then click on "Add Food Menu".

Click "Food Menu Type" and select "Regular" type. We will discuss "Combo" and "Product" food menu types later in other tutorials.

A screenshot of the 'Add Food Menu' form in a software application. The form has a header bar with navigation links: 'POS', 'Add Purchase', 'Today's Summary', 'Register Details', and 'Check-In/Check-out'. The main title is 'Add Food Menu'. Below it, there's a 'Food Menu Type' dropdown menu with 'Regular' selected (highlighted with an orange circle). Other fields include 'Code' (090), 'Category' (Select), and a red 'Read Me First' button. Below these is a table with columns: 'SN', 'Ingredient', 'Consumption', 'Cost', 'Total', and 'Action'. The table has two rows, both with 'Total Cost' in the 'Total' column. Below the table are several input fields: 'Sale Price (Dine In)\*', 'Sale Price (Take Away)\*', 'Sale Price (Delivery)\*', 'Description', 'Photo' (with a 'Choose file' button and 'No file chosen' text), 'Is it Veg Item?\*', and 'Is it Beverage?\*. On the right side, there are buttons for 'UberEats' and 'Foodpanda'.

Click on the "Name" field and enter the name of your food menu here.

Code: The code will be auto-generated but you can enter your own unique code for this food menu so that you can identify this food menu quickly.

In the "Category" section select the food menu category.

The screenshot shows the 'Add Food Menu' interface. The 'Food Menu Type' is set to 'Regular'. The 'Name' is 'Chicken Fry', the 'Code' is '090', and the 'Category' is 'Fast Food'. The 'Ingredient Consumptions' section has a 'Select' dropdown and a 'Read Me First' button. Below this is a table with columns for SN, ingredient, Consumption, Cost, and Total. The 'Total Cost' field is highlighted. There are also fields for Sale Price (Dine In), Sale Price (Take Away), and Sale Price (Delivery) for UberEats and Foodpanda. A description field and a photo upload section are also present.

In this "Ingredient Consumptions" section select the ingredient that you need to make this food menu. Also, you can select ingredients by searching.

The screenshot shows the 'Add Food Menu' interface with the 'Ingredient Consumptions' section expanded. The 'Select' dropdown is open, showing a list of ingredients. The 'Total Cost' field is highlighted with a value of 0.00. The 'Sale Price (Take Away)' and 'Sale Price (Delivery)' fields for UberEats and Foodpanda are also visible.

After selecting the ingredients, enter the consumption in the "Consumption" field of every ingredient. You can see the Consumption Unit just right beside the Consumption field as per the selected ingredient. The system is working here as a Consumption Unit.

Cost: This is the Cost Per Unit of the selected ingredient. Like how much money will be the cost for 1 Pcs, or 200g, or 100ml, etc. It will be auto-populated by default but you can change it by yourself.

The formula for auto-populating the cost per unit is like below:

If the selected ingredient is purchased before then the system will calculate the average of the last 3 purchases and populate the cost here, if there are only 2 purchases there, the system will calculate the average of that two, or if there is only one purchase, the system will populate that purchase price. Remember the system will always consider dividing the purchase price by the conversion rate if the ingredient's purchase unit is different from the consumption unit.

And if there is no purchase record of that selected ingredient then the unit price will come from your added ingredients profile's cost field and shown here in the cost per unit.

Total: This is the Unit Cost multiplied by the consumption.

The total making cost of this food menu will show in the "Total Cost" field.

The screenshot shows the iR system interface for creating a food menu item. The interface includes the following fields and sections:

- Food Menu Type:** Regular
- Name:** Chicken Fry
- Code:** 090
- Category:** Fast Food
- Ingredient Consumptions:** Select (dropdown), Read Me First (button)
- Table of Ingredients:**

SN	Ingredient	Consumption	Unit	Cost	Total
1	Chicken	1	Pcs	41.67	41.67
3	Salt	60	g	0.06	3.60
5	Soyabin Oil	80	ml	0.18	14.40
7	Black pepper	Consumption	g	0.08	0.00
- Total Cost:** 59.67
- Sale Price (Dine In):** Sale Price (Dine In)
- Sale Price (Take Away):** Sale Price (Take Away)
- Sale Price (Delivery):** UberEats, Foodpanda
- Description:** Description
- Photo:** Photo

You can set different prices for different order types. Click the "Sale Price (Dine In)" field and enter the price of selling for Dine in order type.

Click the "Sale Price (Take Away)" field and enter the price of selling for the Take-Away order type. The cost calculation will help you to set the food price.

SN	Variation Name	Code	Sale Price (Dine In)	Sale Price (Take Away)	Sale Price (Delivery)	Loyalty Point
<b>Add Variation</b>						

You will get the Vegetarian button on the POS screen.

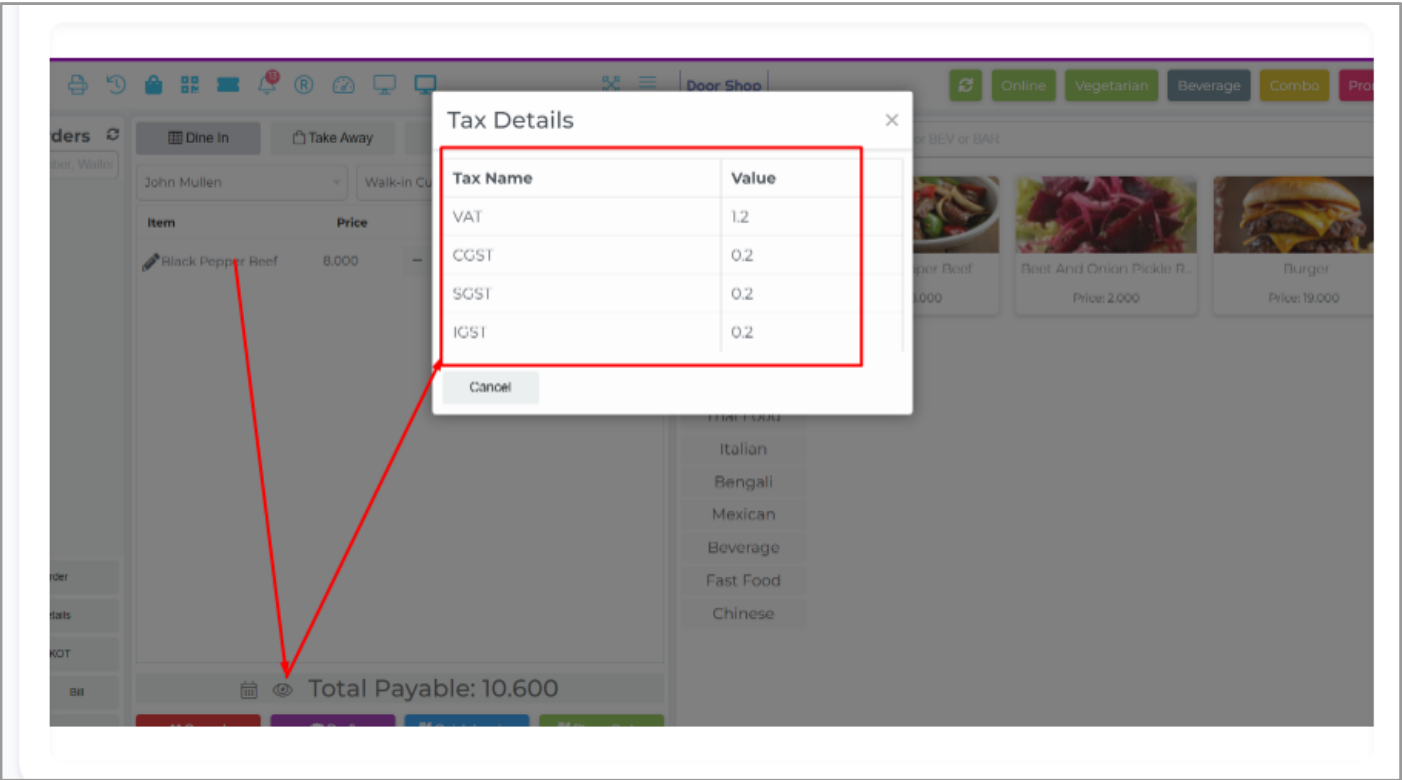

Is it Beverage: Same as Vegetarian.

Tax: In this section, the Taxes will be auto-populated from "Tax Settings".

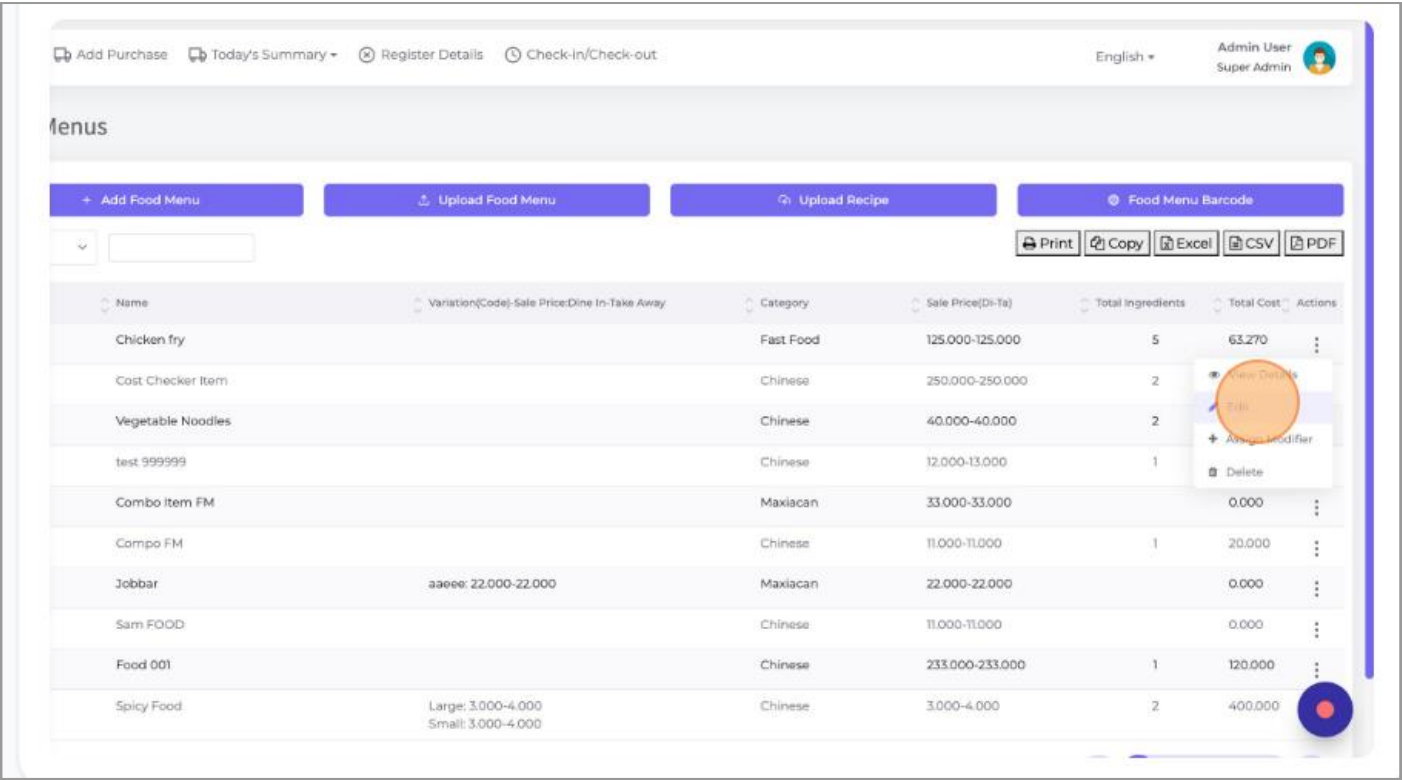

If the food menu taxes are different from the default tax then you can change it yourself by using these tax fields.

The screenshot shows a POS system interface for 'Tax' settings. At the top, there is a 'Total Cost' of 61.27. Below this, there are three input fields for 'Sale Price (Dine In)', 'Sale Price (Take Away)', and 'Sale Price (Delivery)'. To the right of these fields, there are two input fields for 'UberEats' (155) and 'Foodpanda' (140). Below these fields, there is a 'Description' field and a 'Photo' field with a 'Choose file' button. Below the 'Description' field, there is a dropdown menu for 'Is it Veg Item?' with 'No' selected. Below the 'Photo' field, there is a dropdown menu for 'Is it Beverage?' with 'No' selected. Below the 'Is it Veg Item?' dropdown, there is a 'VAT' field with '15' and a '%' sign. Below the 'Is it Beverage?' dropdown, there is a 'SD' field with '4' and a '%' sign. Below the 'VAT' field, there is a 'Loyalty Point' field. Below the 'SD' field, there is an 'IGST' field with '22'. Below the 'Loyalty Point' field, there is a 'Variation' table with columns for 'SN', 'Variation Name', 'Code', 'Sale Price (Dine In)', 'Sale Price (Take Away)', 'Sale Price (Delivery)', and 'Loyalty Point'. Below the table, there are three buttons: 'Add Variation', 'Submit', and 'Back'.

In the POS screen, taxes will be shown like this:

Go to "List Food Menu" and view your all food menu here.  
Here you can edit or delete any food menu by using the edit or the delete button from the Action column in the list.

## 5.7. Pre-Made Food

Pre-made food is also food that is used to make final food. It is similar to an ingredient. Like you use pizza dough to make pizza, here pizza dough is a pre-made food. A pre-made food has its own ingredients to prepare and it has its own stock. So when you make a pre-made food, ingredients used for that pre-made food get deducted from stock and stock of the pre-made food gets increased. And also as you use that pre-made food same as an ingredient in a food so when you make sale of that food item that pre-made food stock also gets down.

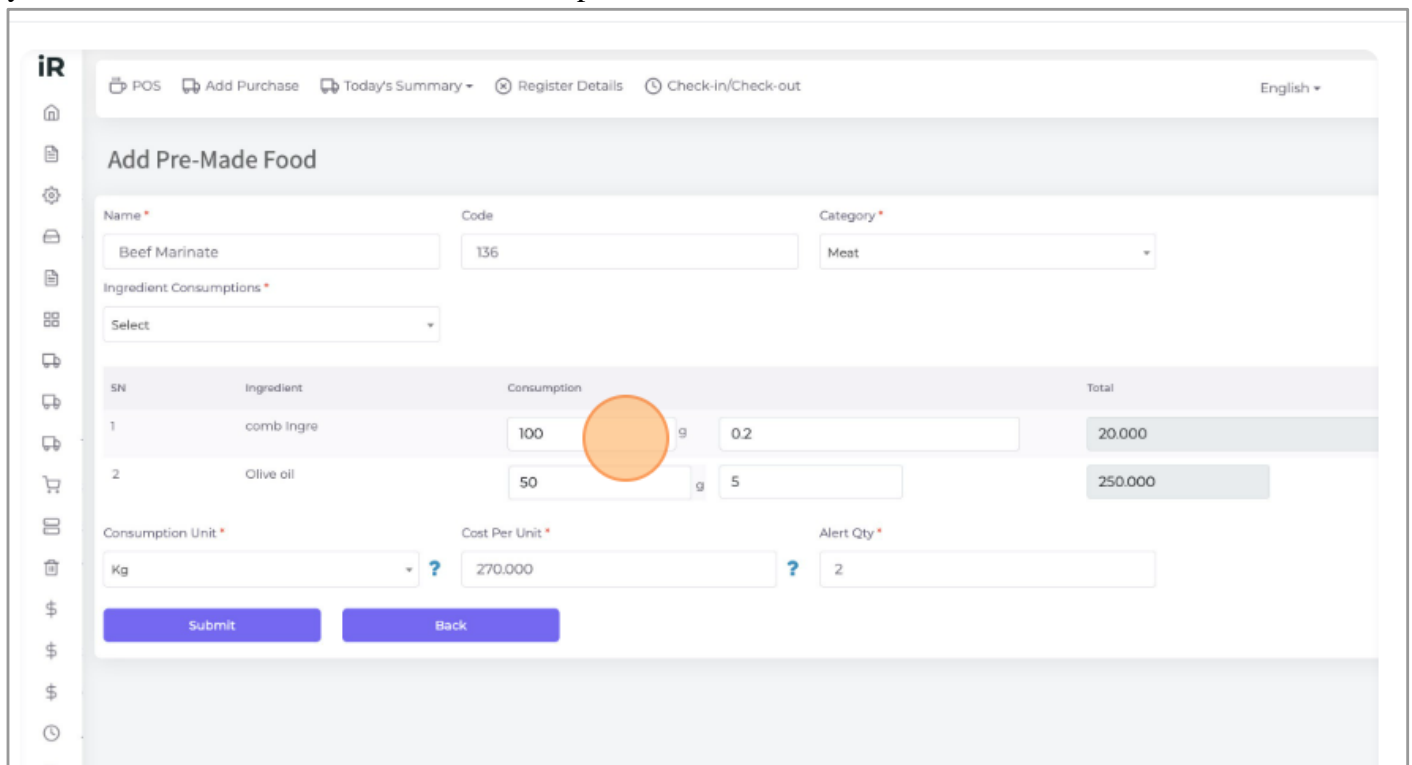

Click on "Add Pre-Made Food" to add a pre-made food item.

Click the "Name" field and enter the name of your Pre-made food item. The food identification code will be auto-generated in the "Code" field. Select the category name of this food from the "Category" drop-down.

A screenshot of the 'Add Pre-Made Food' form. The form has a header bar with navigation icons and a title 'Add Pre-Made Food'. Below the header, there are three input fields: 'Name' (containing 'Beef Marinate'), 'Code' (containing '136'), and 'Category' (a dropdown menu showing 'Meat'). Below these is an 'Ingredient Consumptions' section with a 'Select' dropdown. Underneath is a table with columns 'SN', 'Ingredient', and 'Consumption'. The table has two rows: Row 1 with SN '1', Ingredient 'comb Ingre', and Consumption '100 g' and '0.2'; Row 2 with SN '2', Ingredient 'Olive oil', and Consumption '50 g' and '5'. Below the table are three more input fields: 'Consumption Unit' (a dropdown showing 'Kg'), 'Cost Per Unit' (containing '270.000'), and 'Alert Qty' (containing '2'). There are blue question mark icons next to the 'Consumption Unit' and 'Cost Per Unit' fields. The left sidebar contains various icons for navigation.

**Ingredient Consumption:** Select the needed ingredients from here and enter the consumption unit of those ingredients in the "Consumption" field. On the side of the consumption unit field, you can see a box where you can enter the cost of the entered consumption unit.

The screenshot shows the 'Add Pre-Made Food' form in the iR system. The form includes fields for Name, Code, and Category. Below these is a table for Ingredient Consumptions. The first row shows 'comb ingre' with a consumption of 100 g and a total cost of 20.000. The second row shows 'Olive oil' with a consumption of 50 g and a total cost of 250.000. At the bottom, there are fields for Consumption Unit (Kg), Cost Per Unit (270.000), and Alert Qty (2). The 'Submit' button is highlighted with an orange circle.

SN	Ingredient	Consumption	Total
1	comb ingre	100 g	20.000
2	Olive oil	50 g	250.000

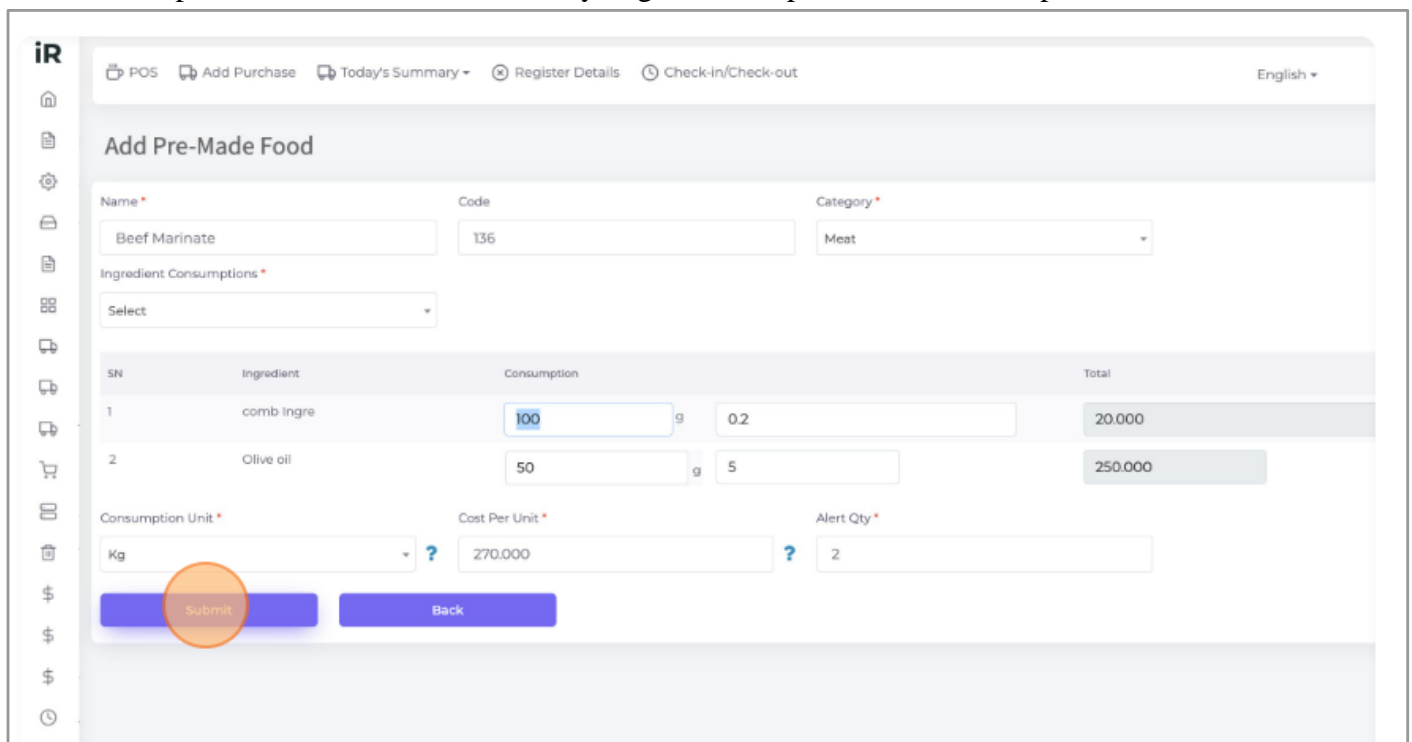

**Consumption Unit:** Here you can select the unit of consumption.

**Cost Per Unit:** In this field enter the cost of per unit for making this premade food.

**Alert qty:** Add an alert quantity it will alert you when the item is going under the quantity low stock.

Then click "Submit" to save this pre-made food item.

Your Added pre-made food will show when you go to add a pre-made food into production.

This screenshot is identical to the previous one, showing the 'Add Pre-Made Food' form. In this view, the 'Submit' button is highlighted with an orange circle, indicating the final step to save the item.

To put pre-made food into production then you need to go to "Add Production" from the left menu.

Here "Reference no" of this production will be auto-generated. You can set your production date in the "Date" field.

Pre-Made Food Item: Here you can see your added pre-made food list. Select any of the premade food which you want to give in production.

In this status field you can see 2 options one is "Draft" which is for saving this production which means the production is ongoing or not done yet. Another one is "Final" which means the production is done. Only the "Final" status will be affected on the stock.

## 6. POS

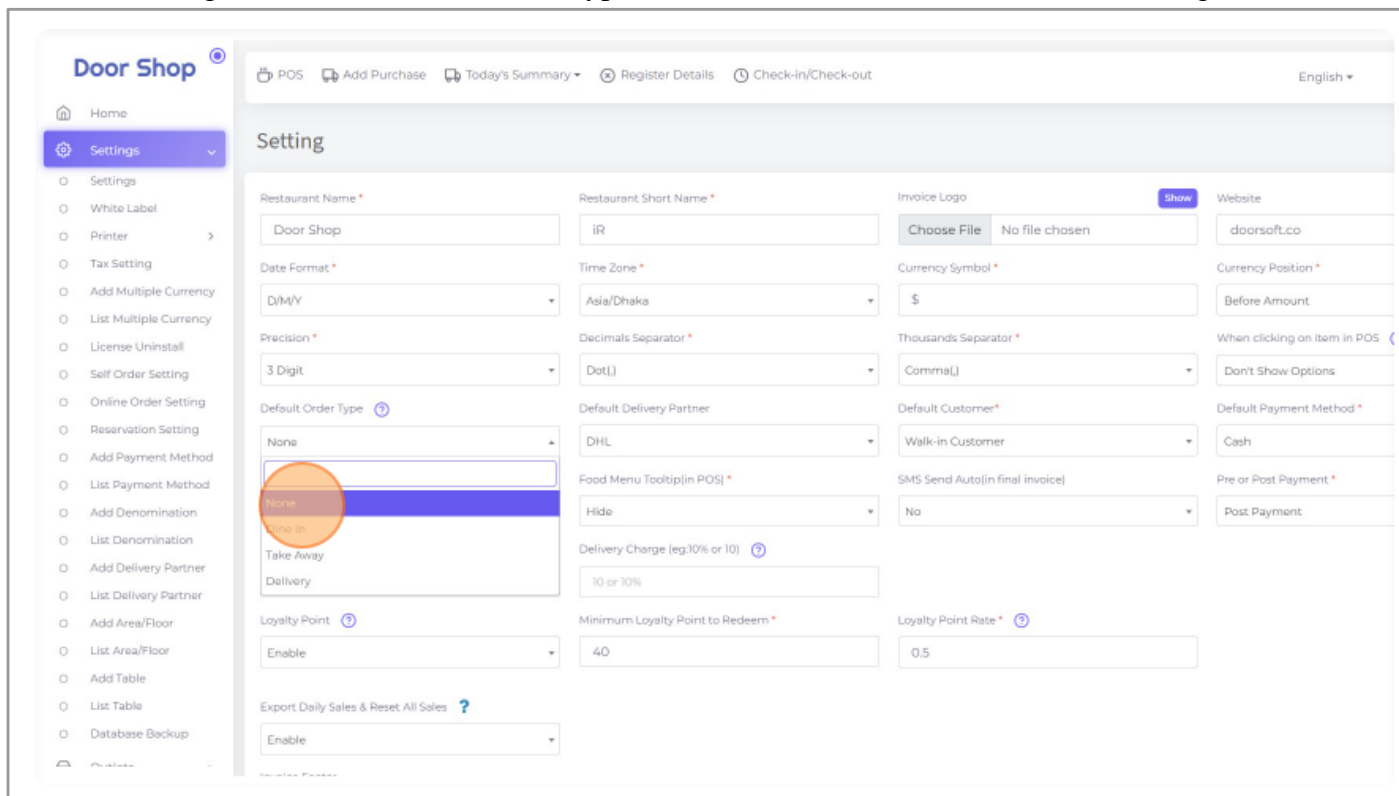

### 6.1. Introduction to POS

#### Order type needs to be selected before selecting item:

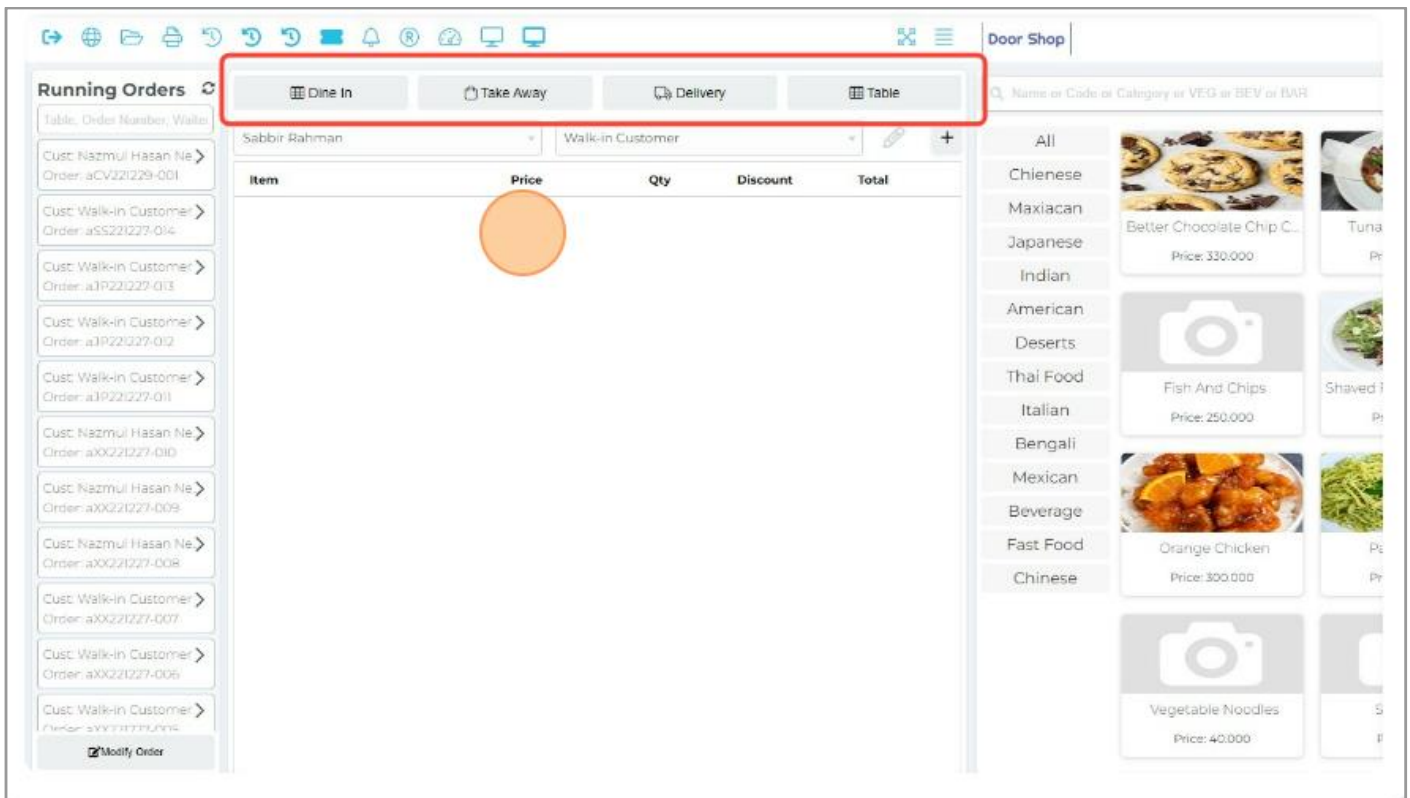

Using this feature you can select your order type when selecting an item to add to the cart. Some do not like to set their order type as default for this reason this feature will help you.

Go to the settings then select "Default order type" set as "None" and submit to save this change.

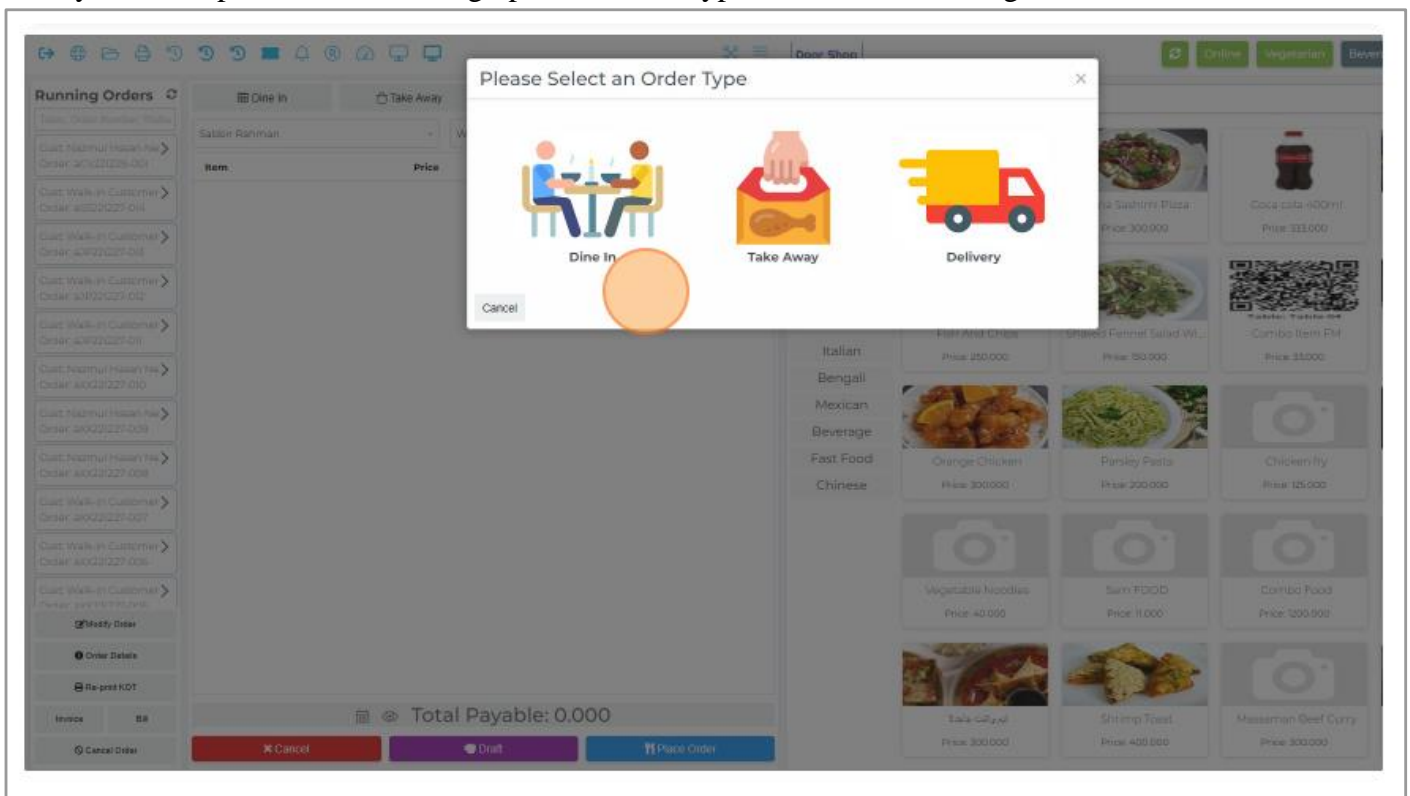

For selecting None here you can see there is no default order selected.

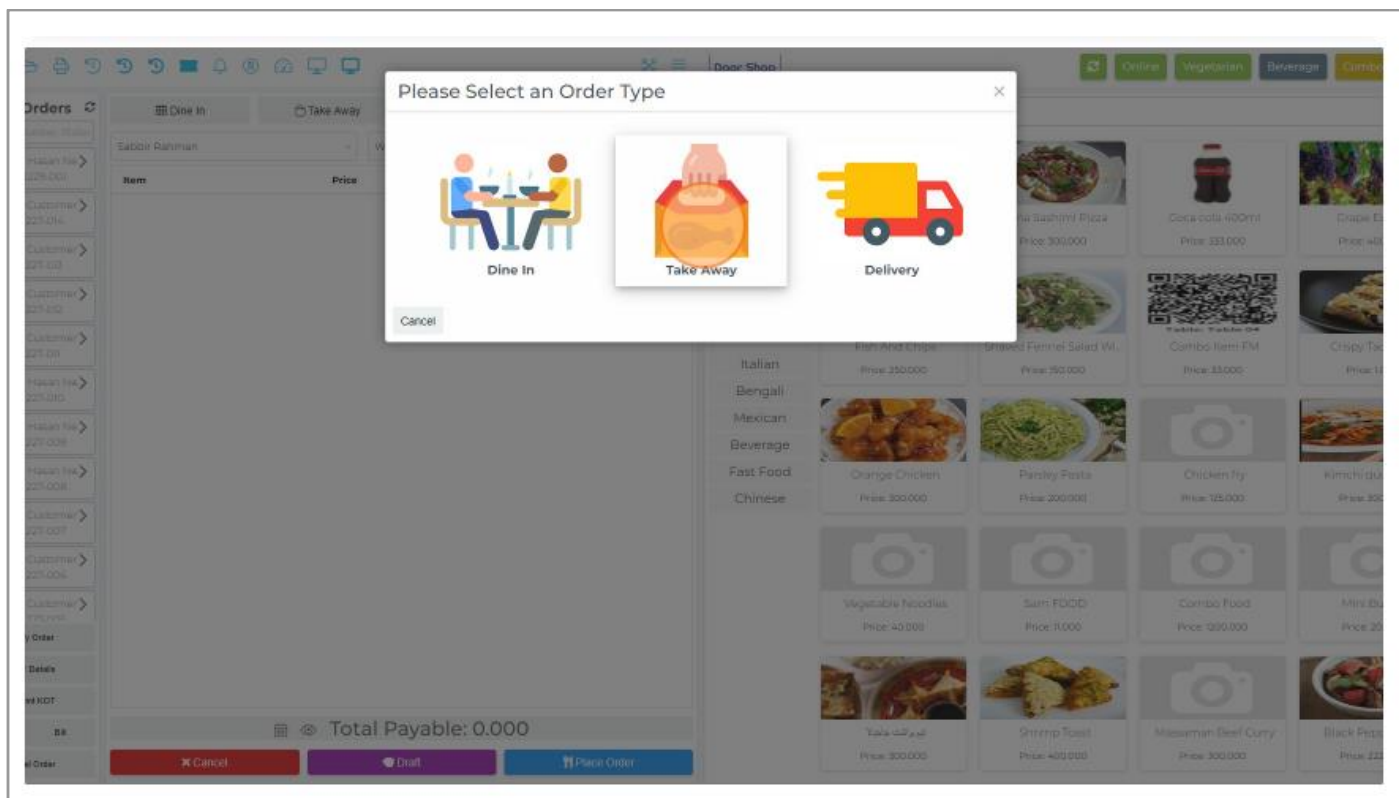

Now try to add an item to the cart.

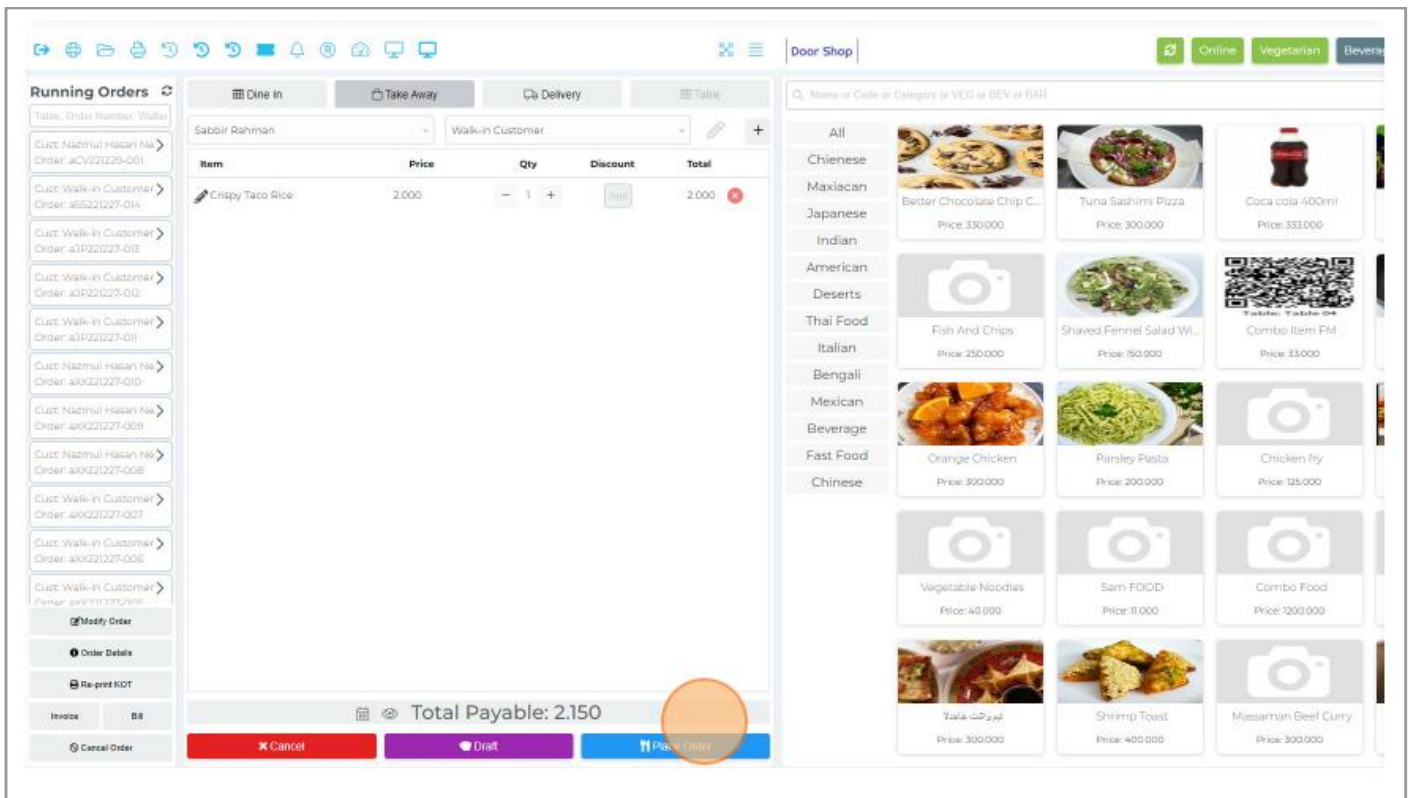

The system will provide the selecting option of order type modal before adding the food to the cart.

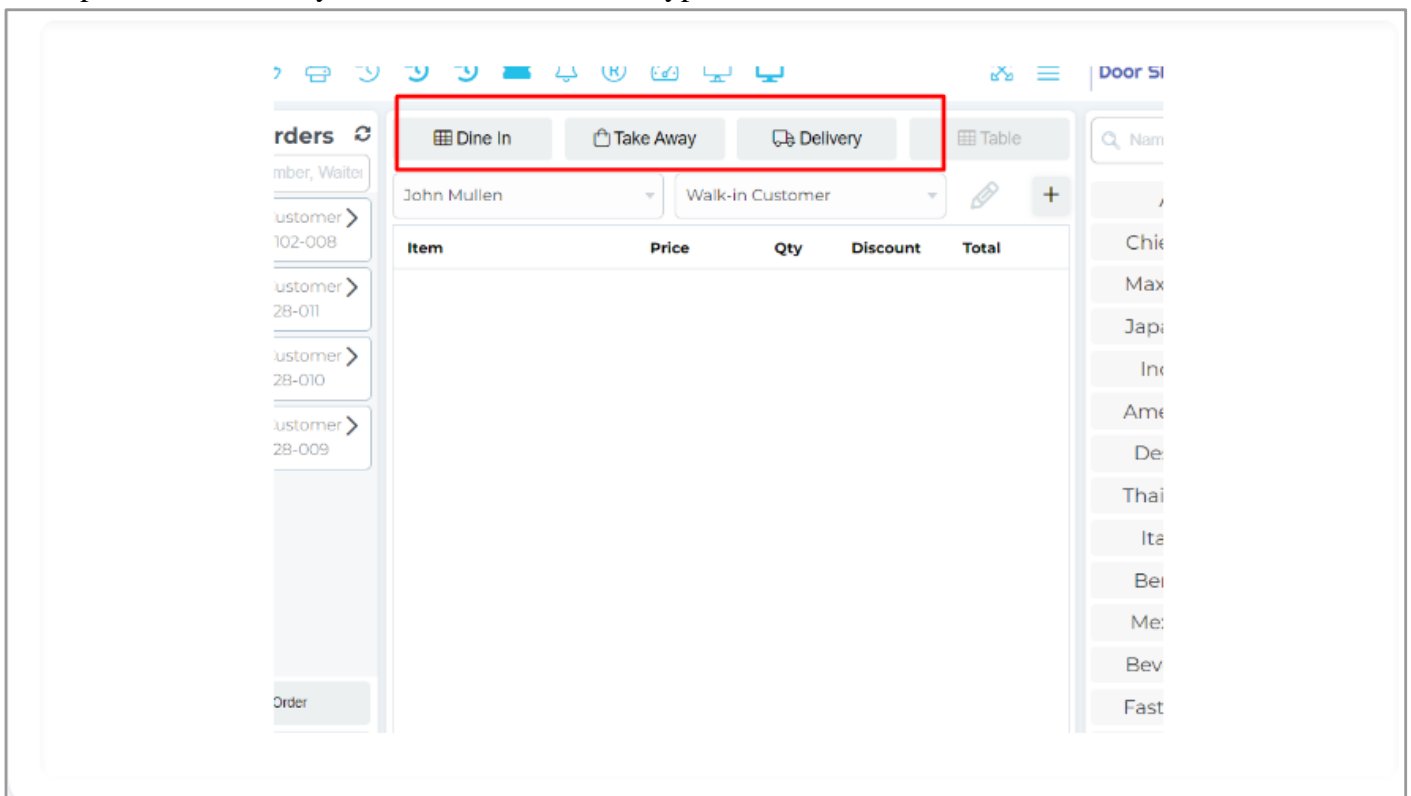

Now select an order type from here as per your need.

Then add items to the cart and then place your order.

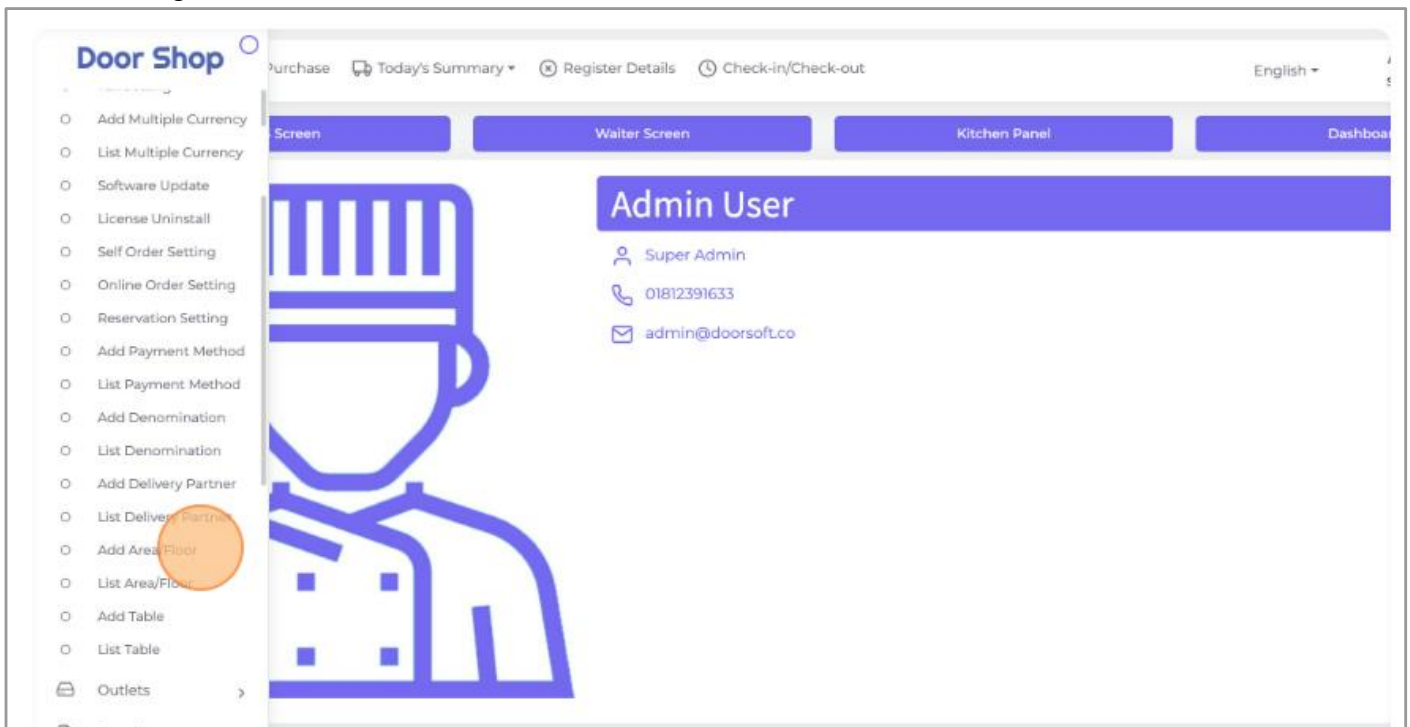

After placed the order, system will unset the order type

## 6.2. Area/Floor

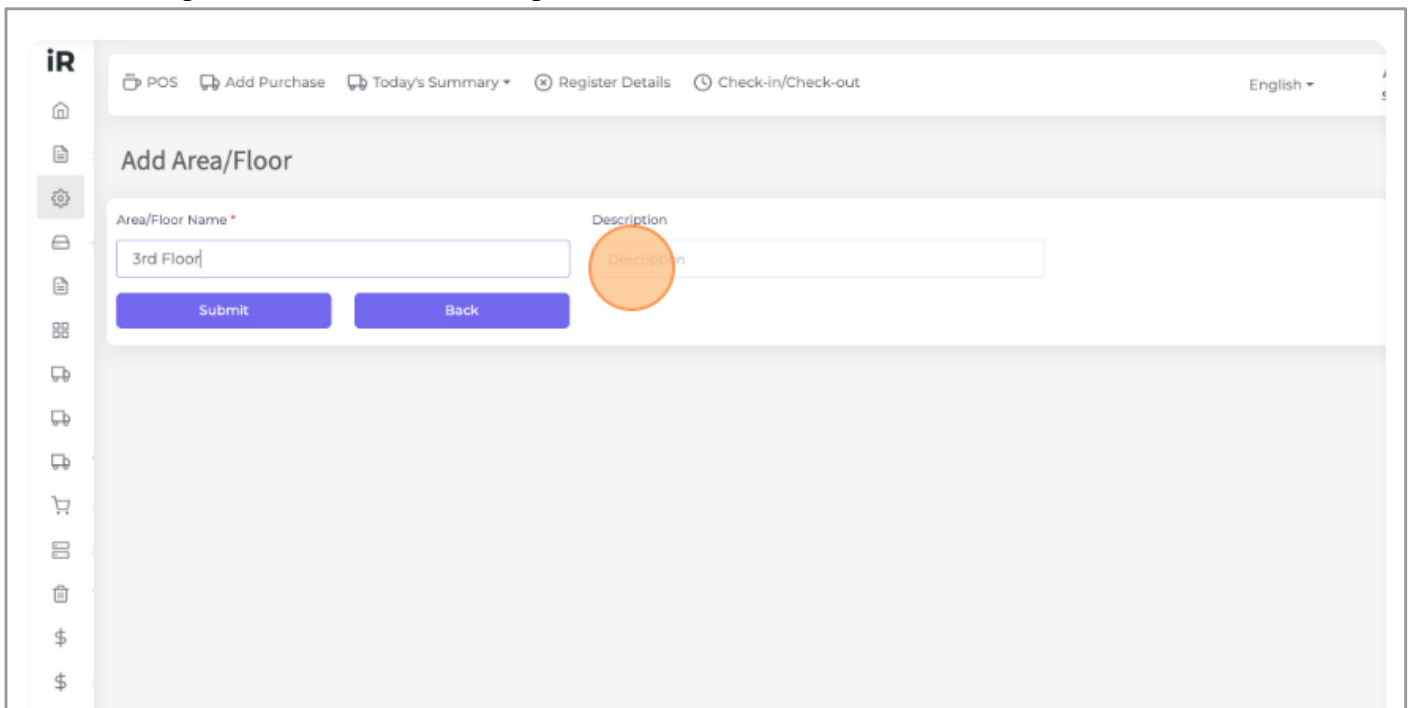

You can add your seating area or floor by using this module that can be identified easily.

Go to "Settings" from the left menu, and then click on "Add Area/Floor".

In the "Area/Floor Name" field enter your area/floor name here.

In the "Description" field enter the description of the area/floor.

Click on the "Submit" button to save the "Area/Floor" information.

## 6.3. Table

Using this module you can manage your tables floor-wise and also can add tables or can assign how many persons can seat.

Go to "Settings" from the left menu, and then click on "Add Table".

Area/floor: Select your Area/Floor from this section for which floor you want to add a table.

A screenshot of the 'Add Table' form in the iR POS system. The form is divided into several sections. On the left, there is a vertical sidebar with icons for different functions. The main form area has a header 'Add Table'. Below this, there are three main input sections: 'Area/Floor', 'Table Name', and 'Seat Capacity'. The 'Area/Floor' section has a dropdown menu with options: Select, 3rd Floor (highlighted with an orange circle), In house, Middle Floor, and Top Floor. The 'Table Name' section has a text input field labeled 'Table Name'. The 'Seat Capacity' section has a text input field labeled 'Seat Capacity'. Below these, there are two more sections: 'Description' with a text input field, and 'Outlet' with a dropdown menu showing 'Door Shop'.

Table Name: Here enter your table name or table number that you can easily find.

In the "Position" field enter the position of your table.

In the "Seat Capacity" field enter the seating capacity of the table.

In the "Outlet" section select the specific outlet to which you want to add a table in case you are using the Multi Outlet version.

In the "Description" field you can enter the description of the table.

The screenshot shows the 'Add Table' form in the iR POS system. The form is titled 'Add Table' and is located in the 'Settings' section of the left menu. The form contains the following fields:

- Area/Floor \***: A dropdown menu with '3rd Floor' selected.
- Table Name \***: A text input field with '06' entered.
- Position \***: A text input field with 'left' entered.
- Description**: A text input field with 'Description' entered.
- Seat Capacity \***: A text input field with '06' entered.

At the bottom of the form, there are two buttons: 'Submit' and 'Back'. The 'Submit' button is highlighted with an orange circle.

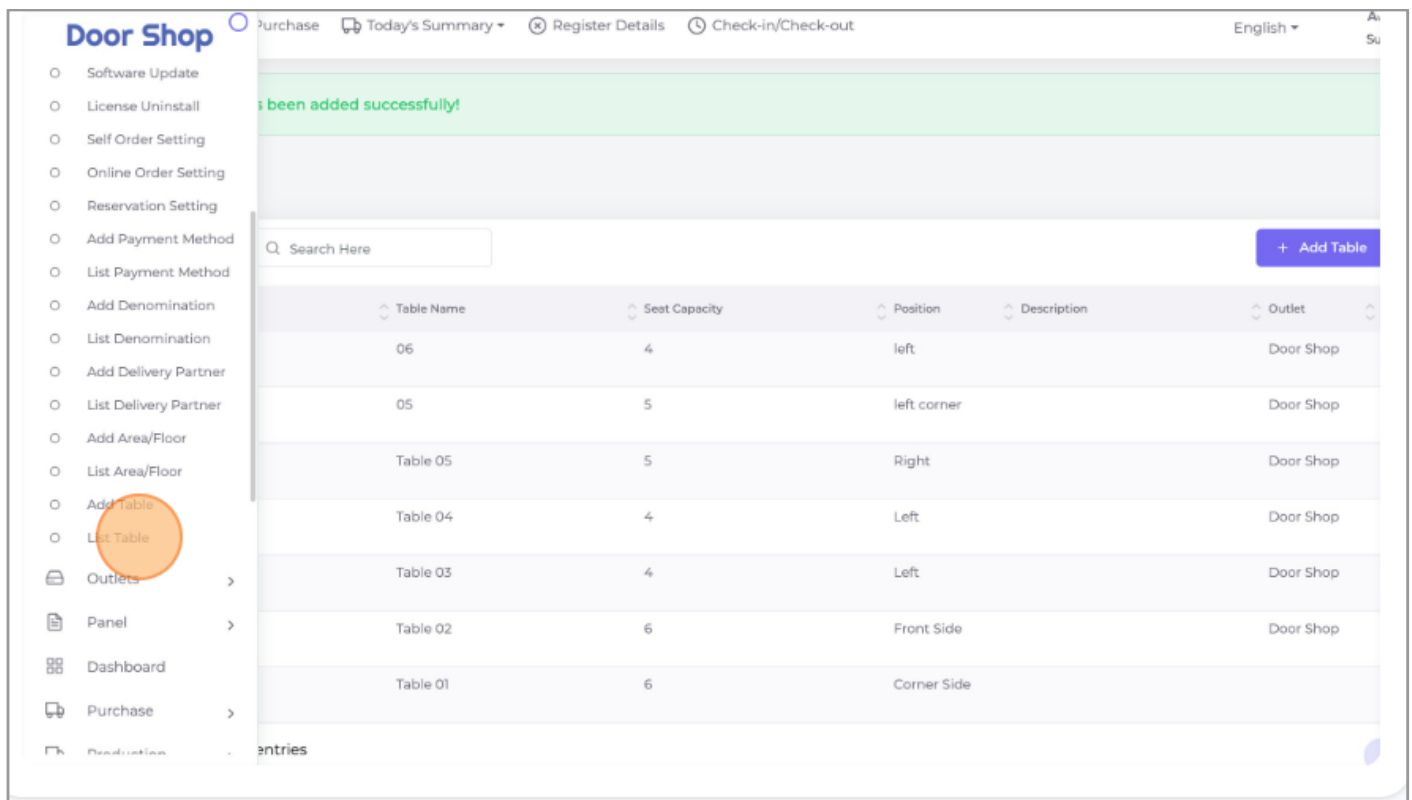

Click "Submit" to save this table information.

The screenshot shows the 'Add Table' form in the iR POS system. The form is titled 'Add Table' and is located in the 'Settings' section of the left menu. The form contains the following fields:

- Area/Floor \***: A dropdown menu with '3rd Floor' selected.

Save Setting

You may able to rotate your table left or right and you can use two background for different floor. Then save it now go to POS screen.

You need to select your table then place order, it will show the running order in table and you will able to take action from left buttons very quickly. Also you will get kitchen status in the table over.

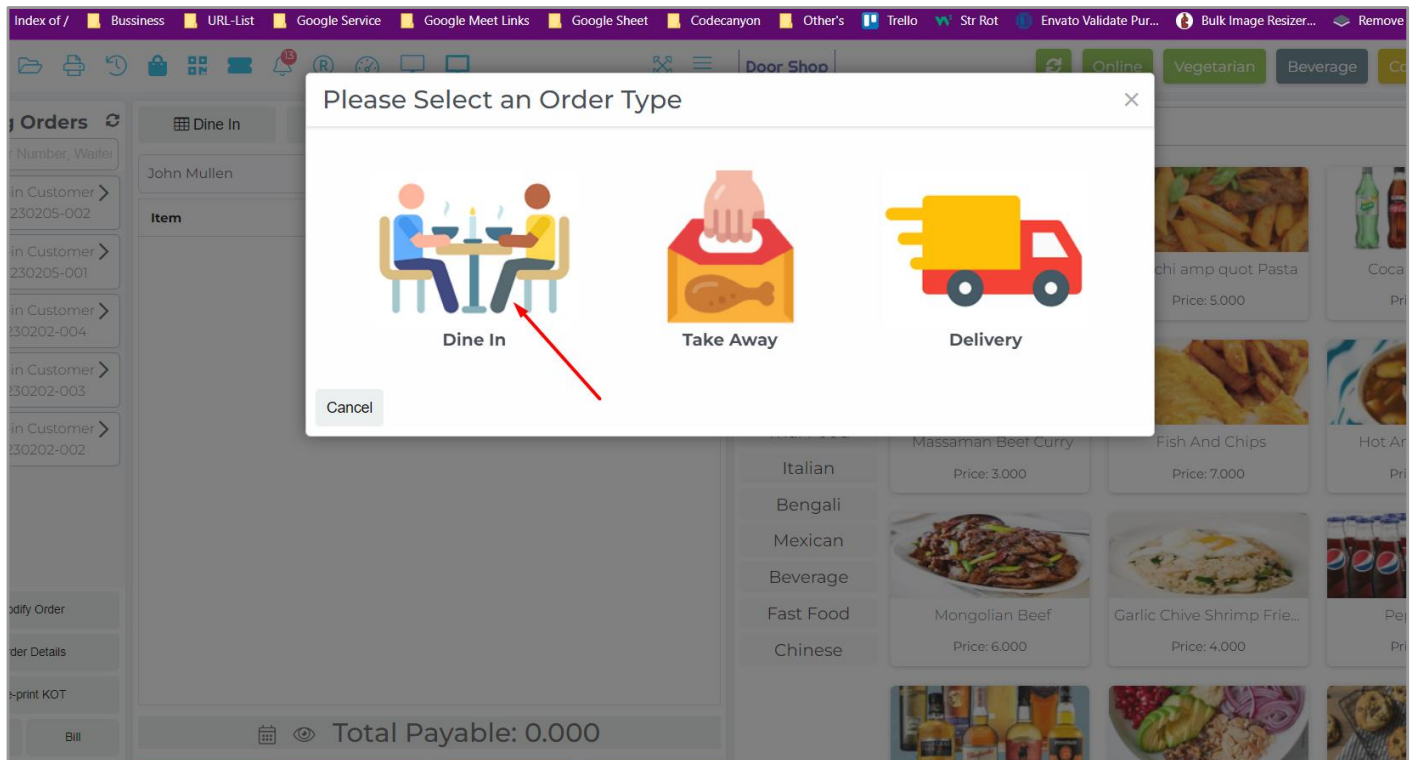

## 6.5. Placing a Dine-in, Take Away & Delivery Order

If customers want to eat food inside the restaurant you have to place dine-in order for them here you also can set a specific table for the customers.

Here in the POS screen select the order type as "Dine In" and then it will open a window for selecting the table.

*Note: if you do not select your default order type in settings then the system will show this modal when you select the food menu from the right side for selecting the order type. And the system will consider different prices as per order type if you set different prices.*

Here you can select your table from any Area/Floor. Select your "Area/Floor" from the left side then select the table.

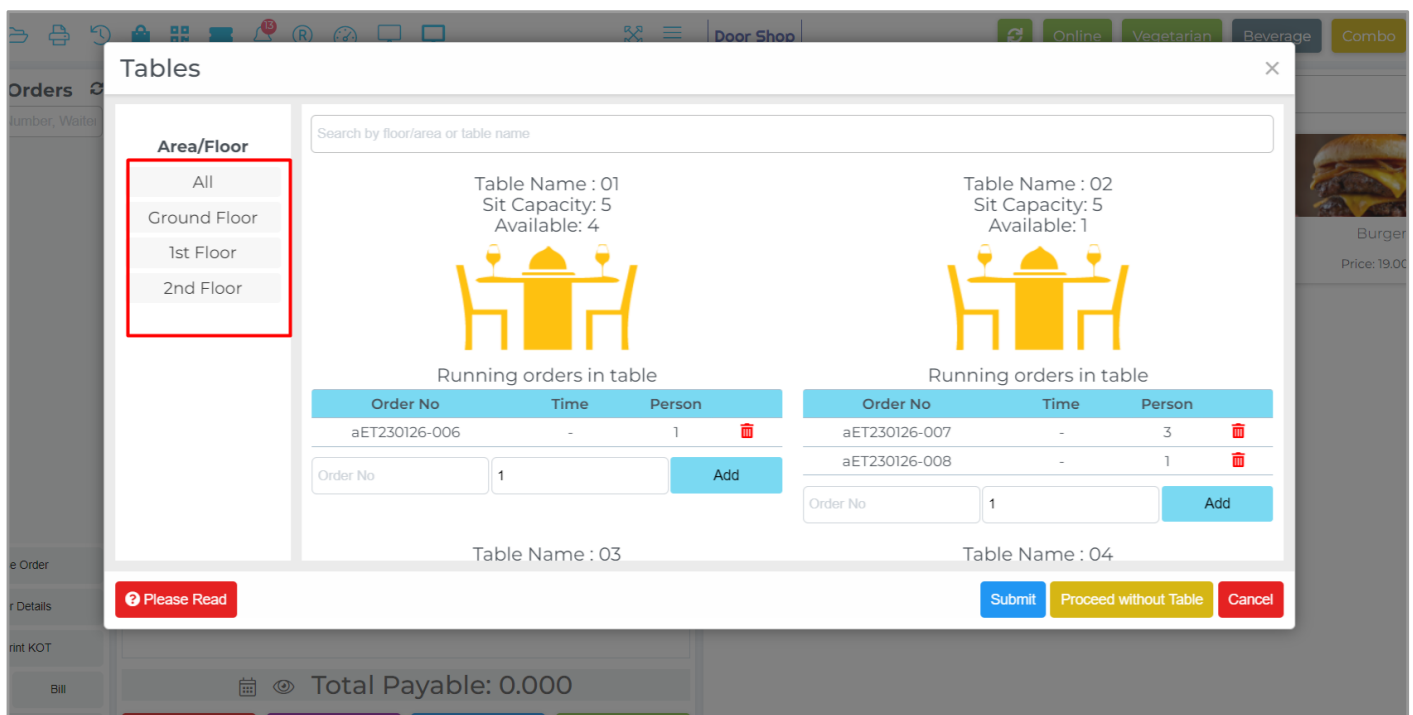

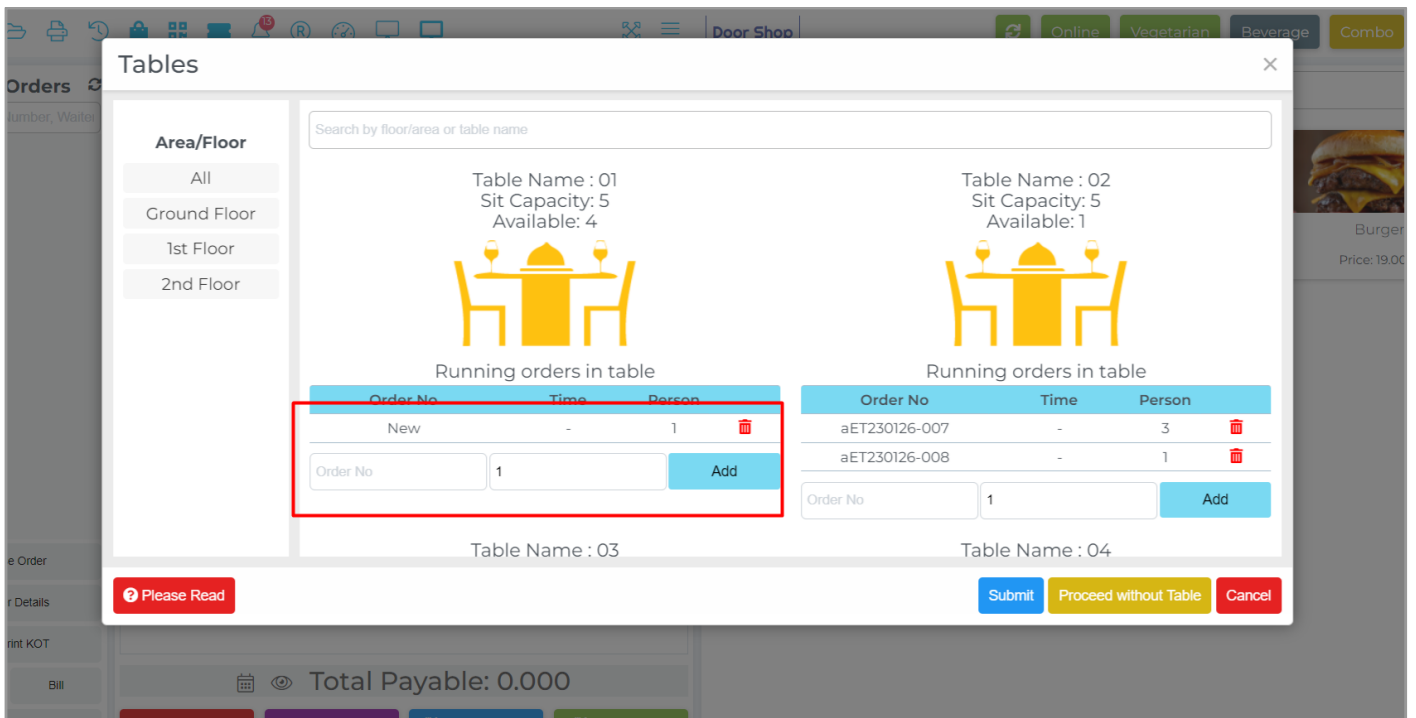

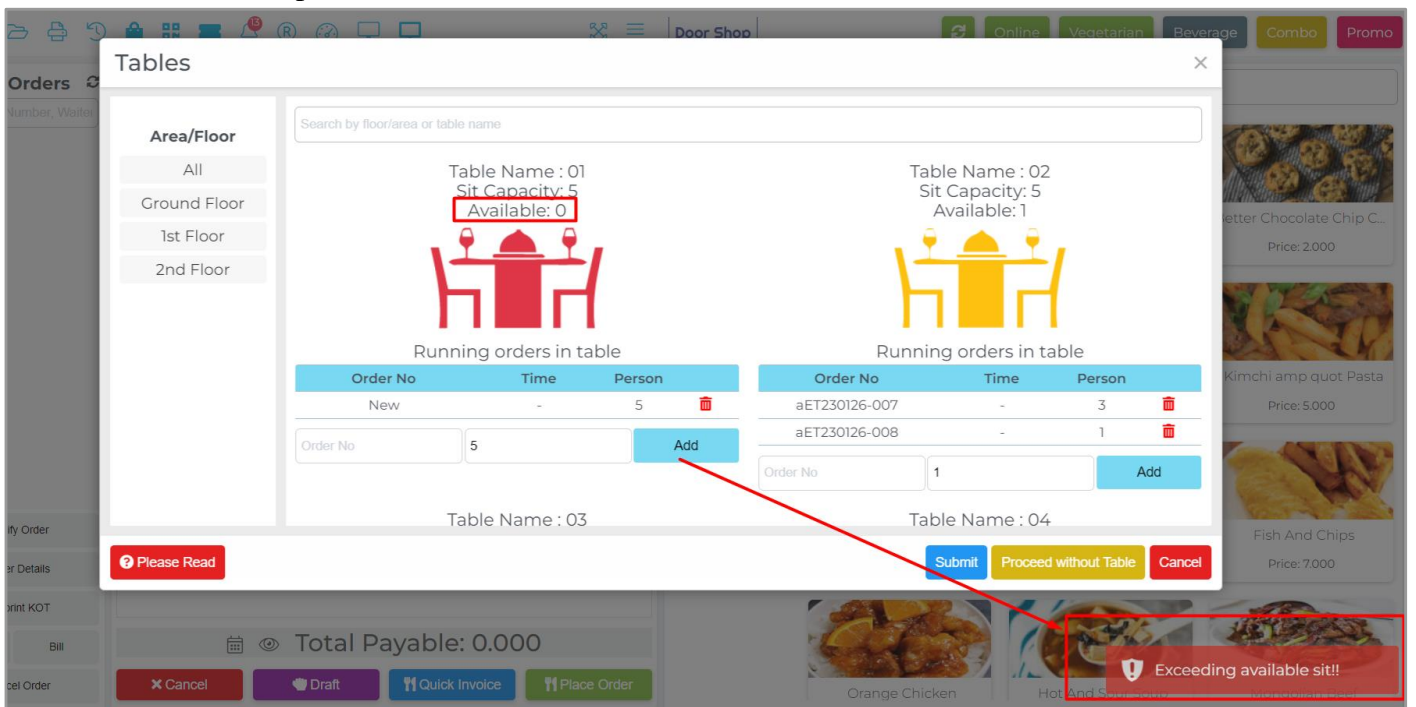

Table selection for Dine In order: Now insert the number of people for the table, click "Add," and submit. In the case of standing customers here you also can serve food without a table for that click on the "Proceed without Table" button.

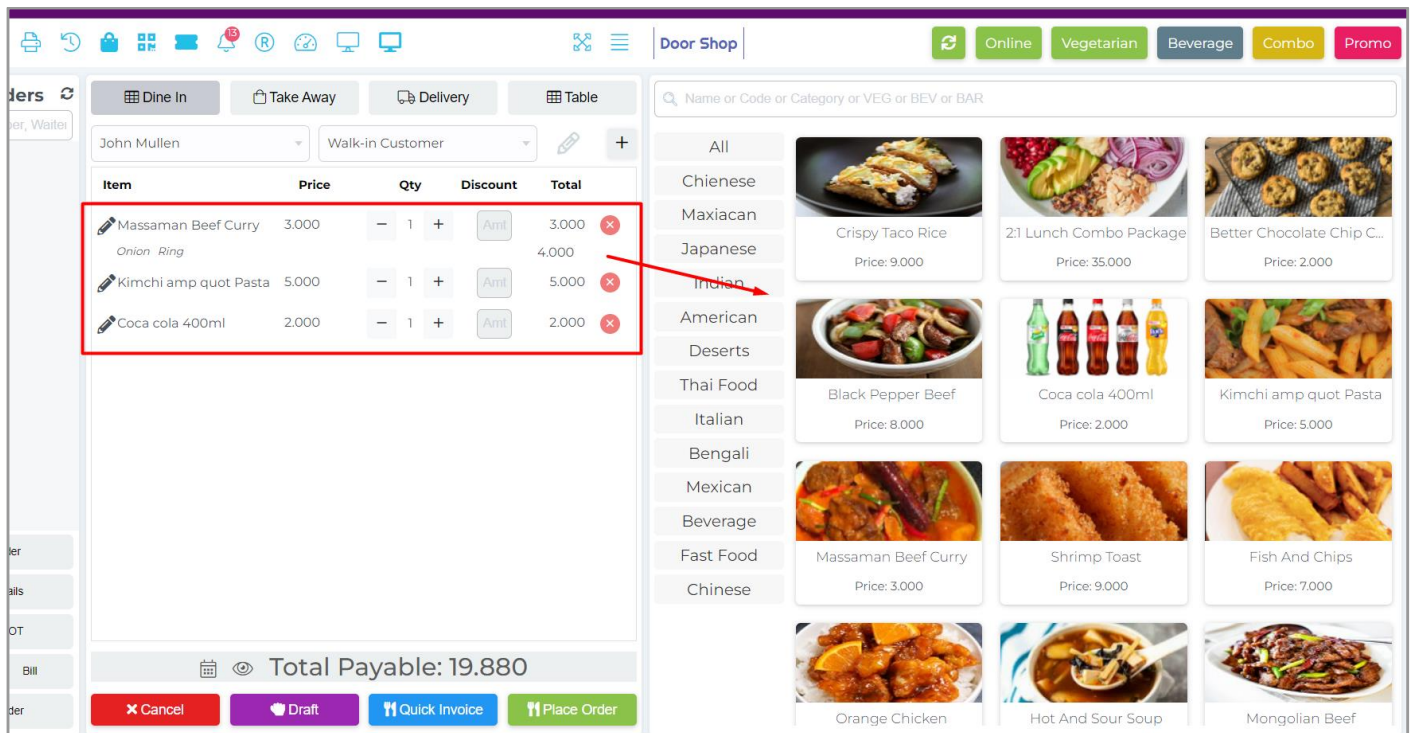

Restrict table selection on ongoing table: In case your table already engaged all of capacity then you will not be able to add another person.

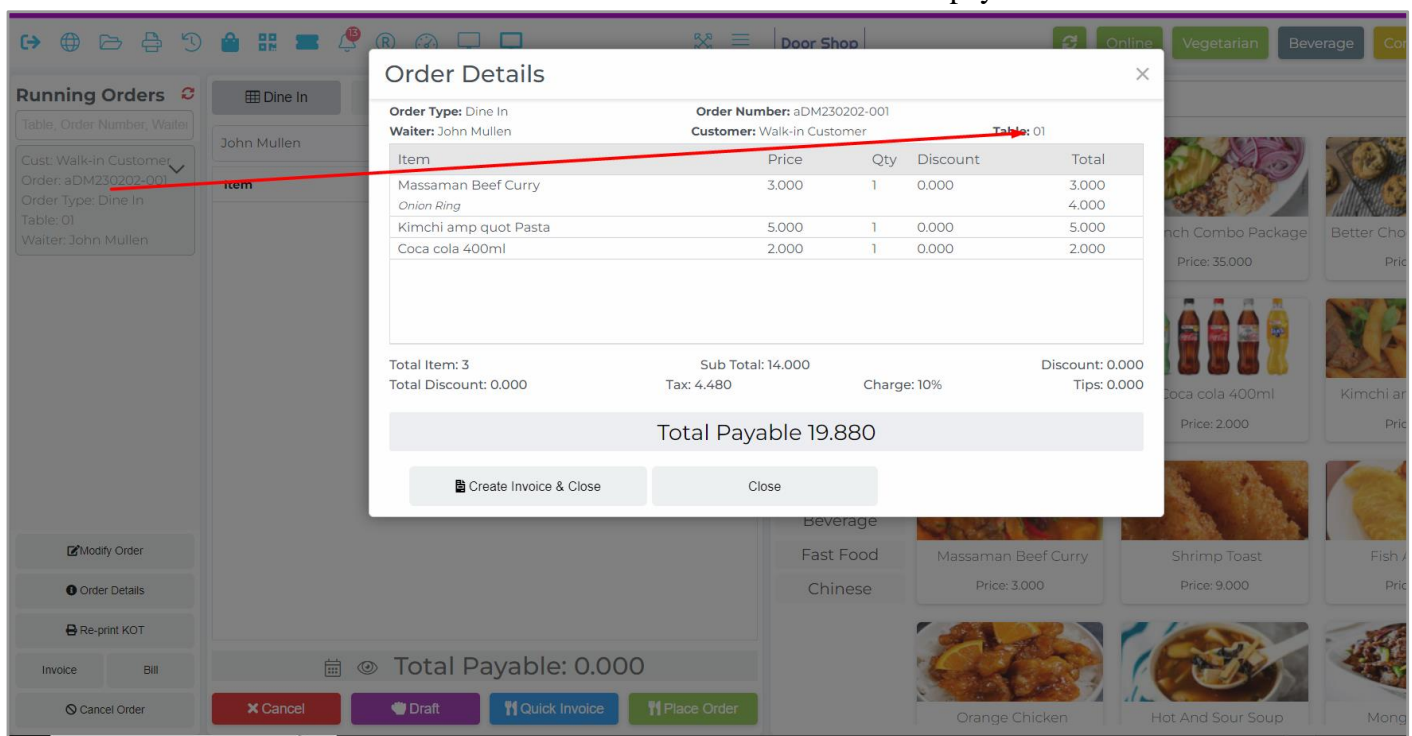

Now select the items to the cart then place the order for the selected table. After placing the order system will print KOT automatically if you set direct print from setting, otherwise the system will show you a browser popup to print the KOT.

Here select the recent place order from the running orders it will open a window like this here you can see the table number of this order now click "Create Invoice & Close" to receive payment and create an invoice.

Select the order and generate an invoice. After generating the invoice then system will print Invoice automatically if you set direct print from setting, otherwise system will show you browser popup for print the Invoice.

Second one is New Items, now click on this button and the system will show blank, because we already printed, the system will consider only updating qty of items or new added items only.

Let's add a new item after modifying the order.

The screenshot shows the Door Shop POS interface. On the left, under 'Running Orders', there are four order cards. The first card is selected and has a red arrow pointing to it. The main area displays a table of items for the selected order. The first item, 'Garlic Chive Shrimp Fried Rice With Garlic Chips', is highlighted with a red box. The right sidebar shows a category list and some product thumbnails.

For Take Away Order: Using this you can place a Take Away order for your restaurant. And it will be the same process of Dine-in type order.

The screenshot displays a web-based restaurant management system. A modal dialog box titled "Please Select an Order Type" is centered on the screen. It contains three selectable options, each with an icon and a label: "Dine In" (icon of two people at a table), "Take Away" (icon of a hand holding a box with a chicken drumstick), and "Delivery" (icon of a delivery truck). A red arrow points to the "Take Away" option. Below the options is a "Cancel" button. The background is a blurred view of the system's main interface, which includes a top navigation bar with various service links (Online, Vegetarian, Beverage, etc.), a left sidebar with order management tools, and a main menu area displaying food items like "Mongolian Beef" and "Garlic Chive Shrimp Fried Rice" with their respective prices.

For Delivery Order: Using this feature you can place a Delivery order for your restaurant.

After selecting the delivery order system will consider different delivery partner-wise prices in case you have a delivery partner otherwise the system will consider your default delivery price.

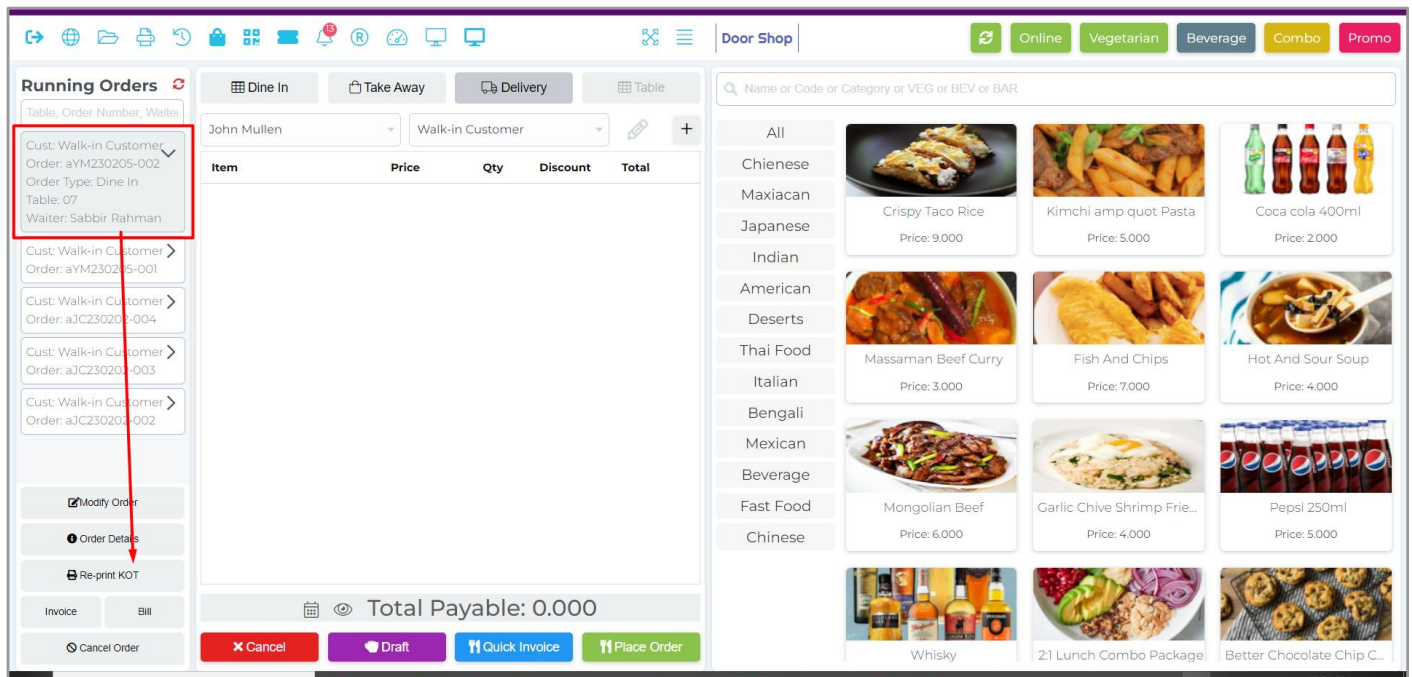

And Finally the same process as Dine-in order.

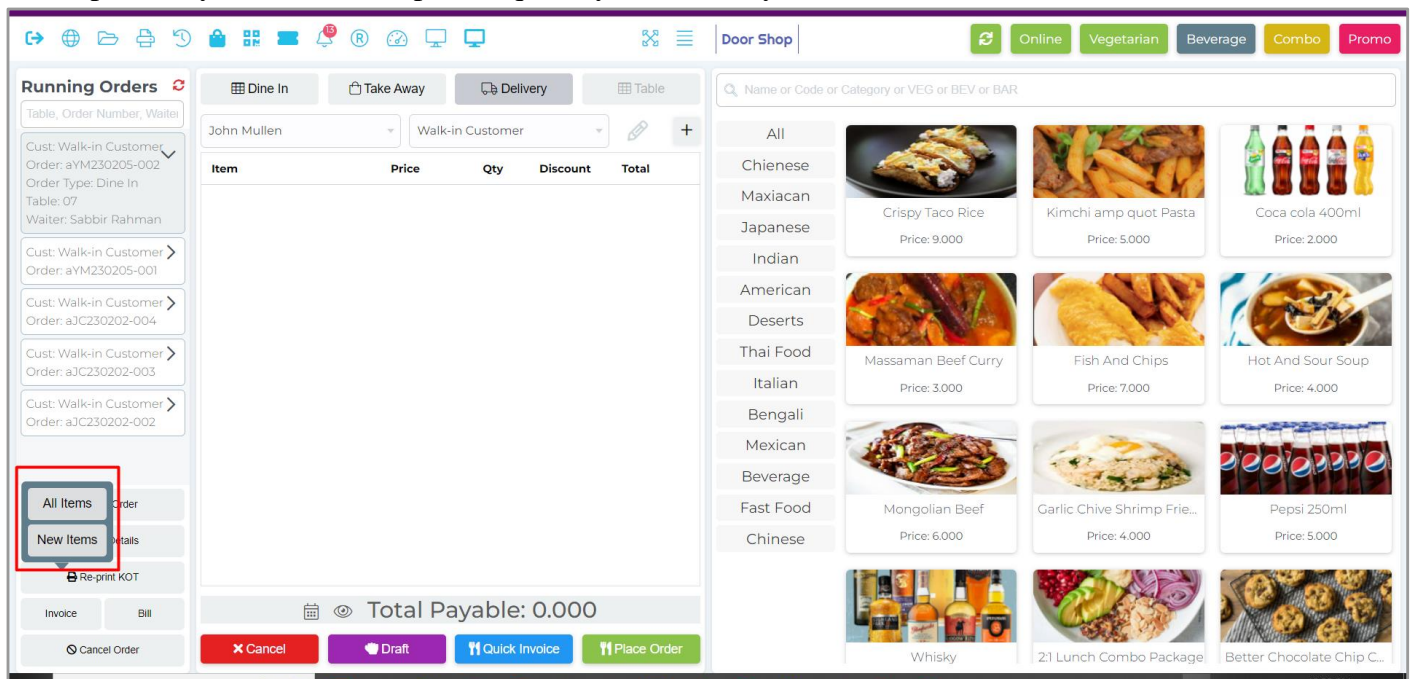

## 6.7. Reprint KOT

Somewhat you may need to print the KOT again after placing the order like: the paper is empty in one of the KOT printers, paper waster, or you didn't set up any auto KOT printing using the print server. So in that case, you can Reprint the KOT.

Select an order from the running order section then click on Reprint KOT.

System will show two buttons, All Items means, system will print all items every time and New Items means it will print only new items or updated quantity after modify the order.

After clicking on the Modify Order button.

**KOT: Bar**

Print

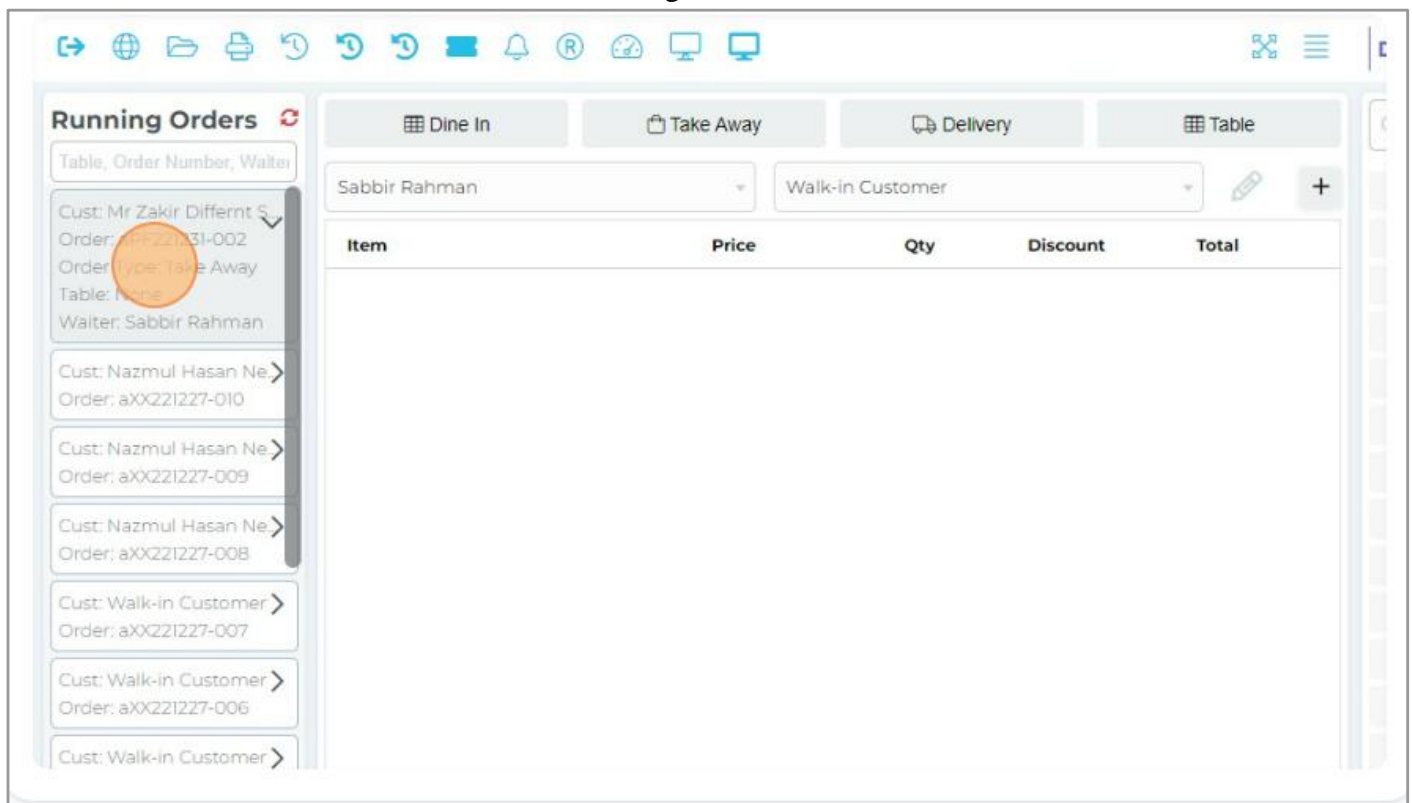

Please follow these steps before you print for first time:

1. Disable Header and Footer in browser's print setting  
For Firefox: File > Page Setup > Margins & Header/Footer > Headers & Footers > Make all --blank--  
For Chrome: Menu > Print > Uncheck Header/Footer in More Options

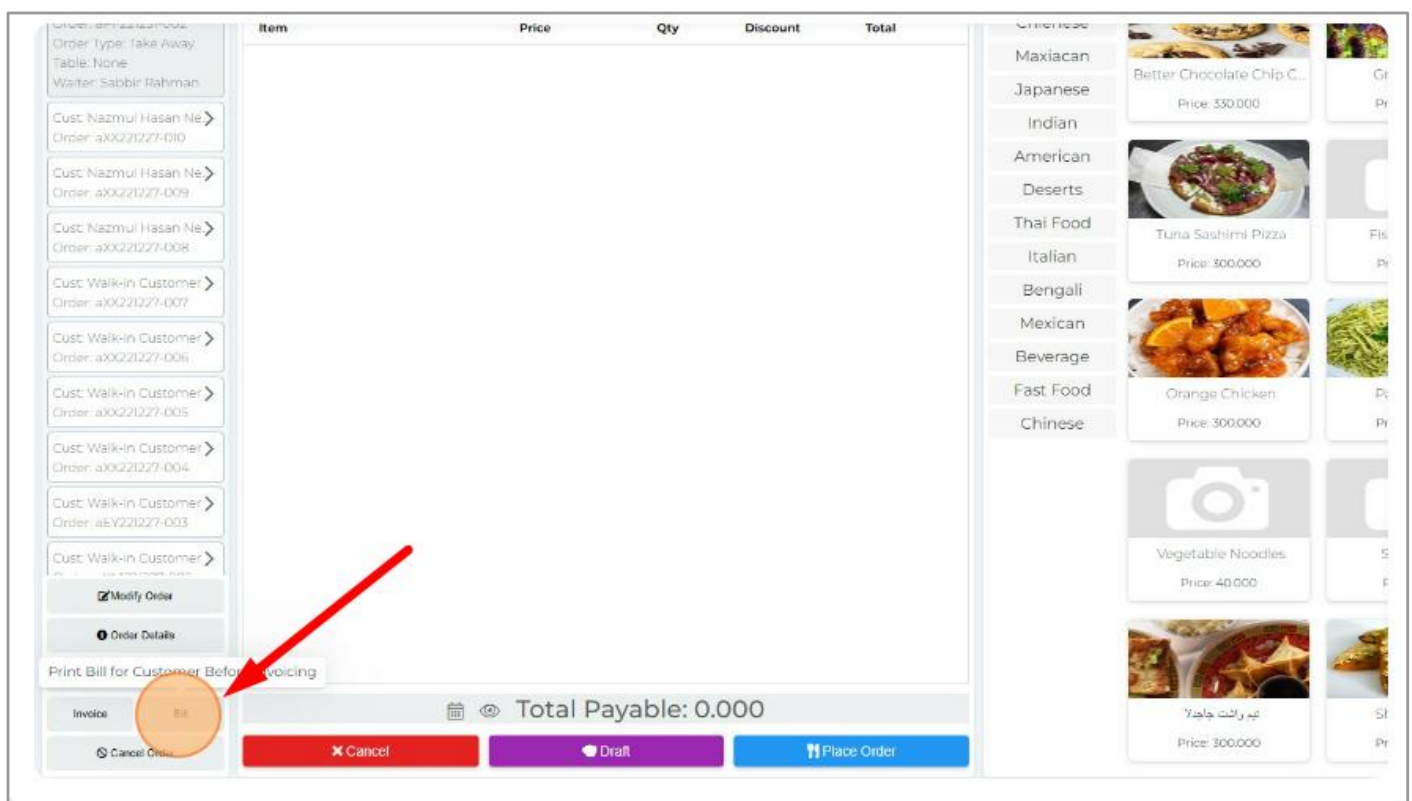

## 6.8. Bill

Sometimes you need to print a bill for a customer before invoicing to show him how much he needs to pay, in that case, using this feature you can print the bill before the invoice.

Select the order from the left side under the Running orders.

Then click "Bill" and it will print an invoice for this order.

After clicking "Bill" the bill is printed for the selected order.

## 6.9. Invoice & Finalize Sell

Select the order from the left side under the Running orders. And click on the Invoice.

The screenshot displays the Door Shop POS interface. On the left, the 'Running Orders' section lists several orders. One order is highlighted with a red box and a red arrow pointing to the 'Single Pay' button in the bottom left. The order details are:

- Cust: Walk-in Customer ✓
- Order: aPY230209-002
- Order Type: Dine In
- Table: None
- Waiter: John Mullen

The main order view on the right shows a table with columns: Item, Price, Qty, Discount, and Total. Below the table, the 'Total Payable' is 0.000. The bottom bar contains buttons: Cancel, Draft, Quick Invoice, and Place Order.

If your order type is Dine-in then the system will show two buttons here, one of Split Bill and another one is Single Pay, we will get more details about Split Bill in another section. If your order type Take Away or Delivery then the system will finalize modal directly.

You will get multiple payment options in one sale. So, click on your payment method from the left side then add the amount and then click on Add button.

# 6.10. Split Bill

The number of guests evenly divides the entire bill, and each person pays an equal share, regardless of his order.

Only Dine in type order will consider Split Bill. Let's add a Dine in type order.

The number of guests/persons is 3 that means the system will allow a maximum 3 split.

Select and click on Split Bill

# 6.11. Modify Order

After placing an order, the customer may ask for new foods, or he may add some note on his ordered items, or he may cancel any item from his order. In that case, you can modify the order and add or delete any item and also can change the quantity as per your need.

First, add some items to the cart and place an order. Then select the order from the running order and click on the Modify Order button.

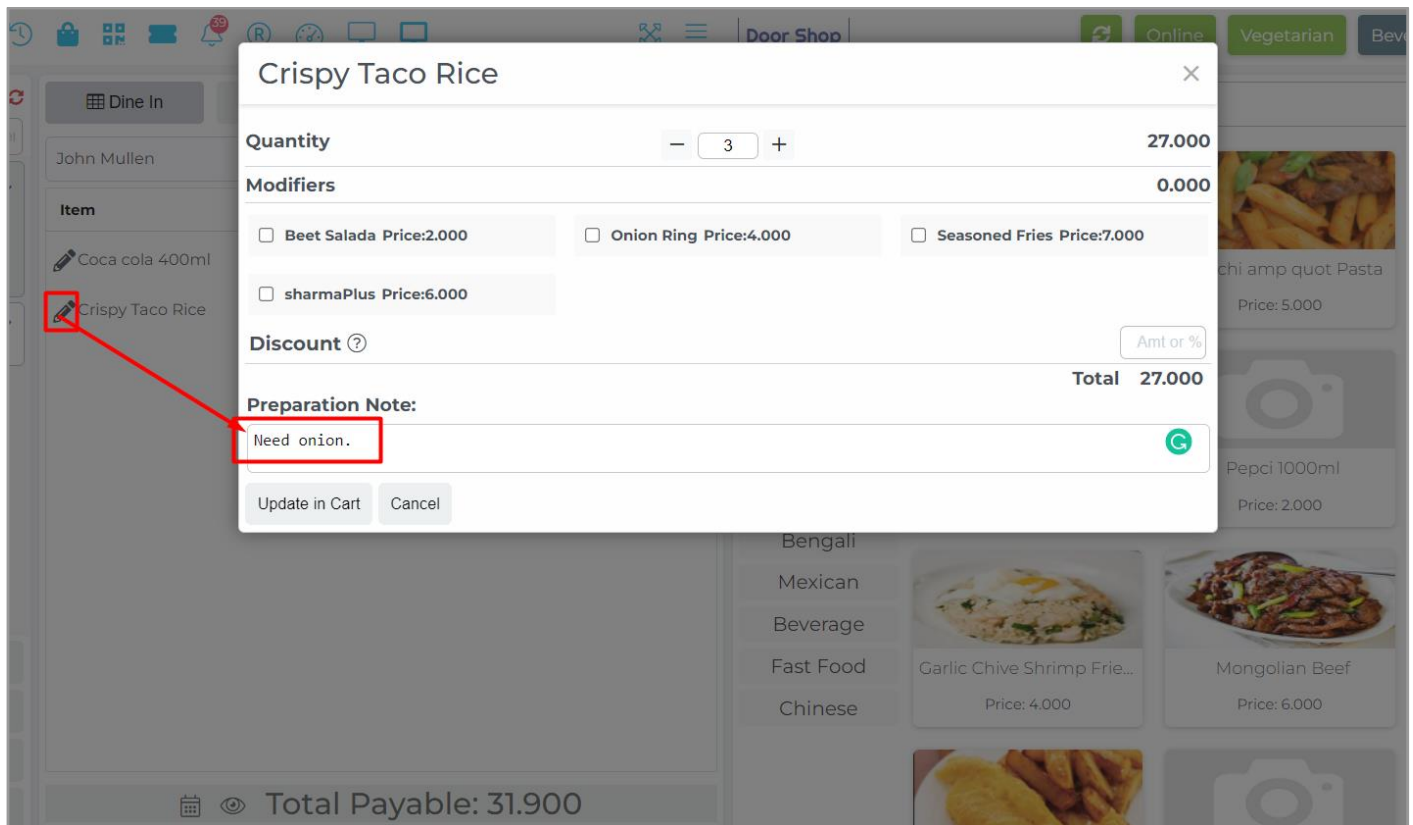

Now you can update the quantity as per customer request.

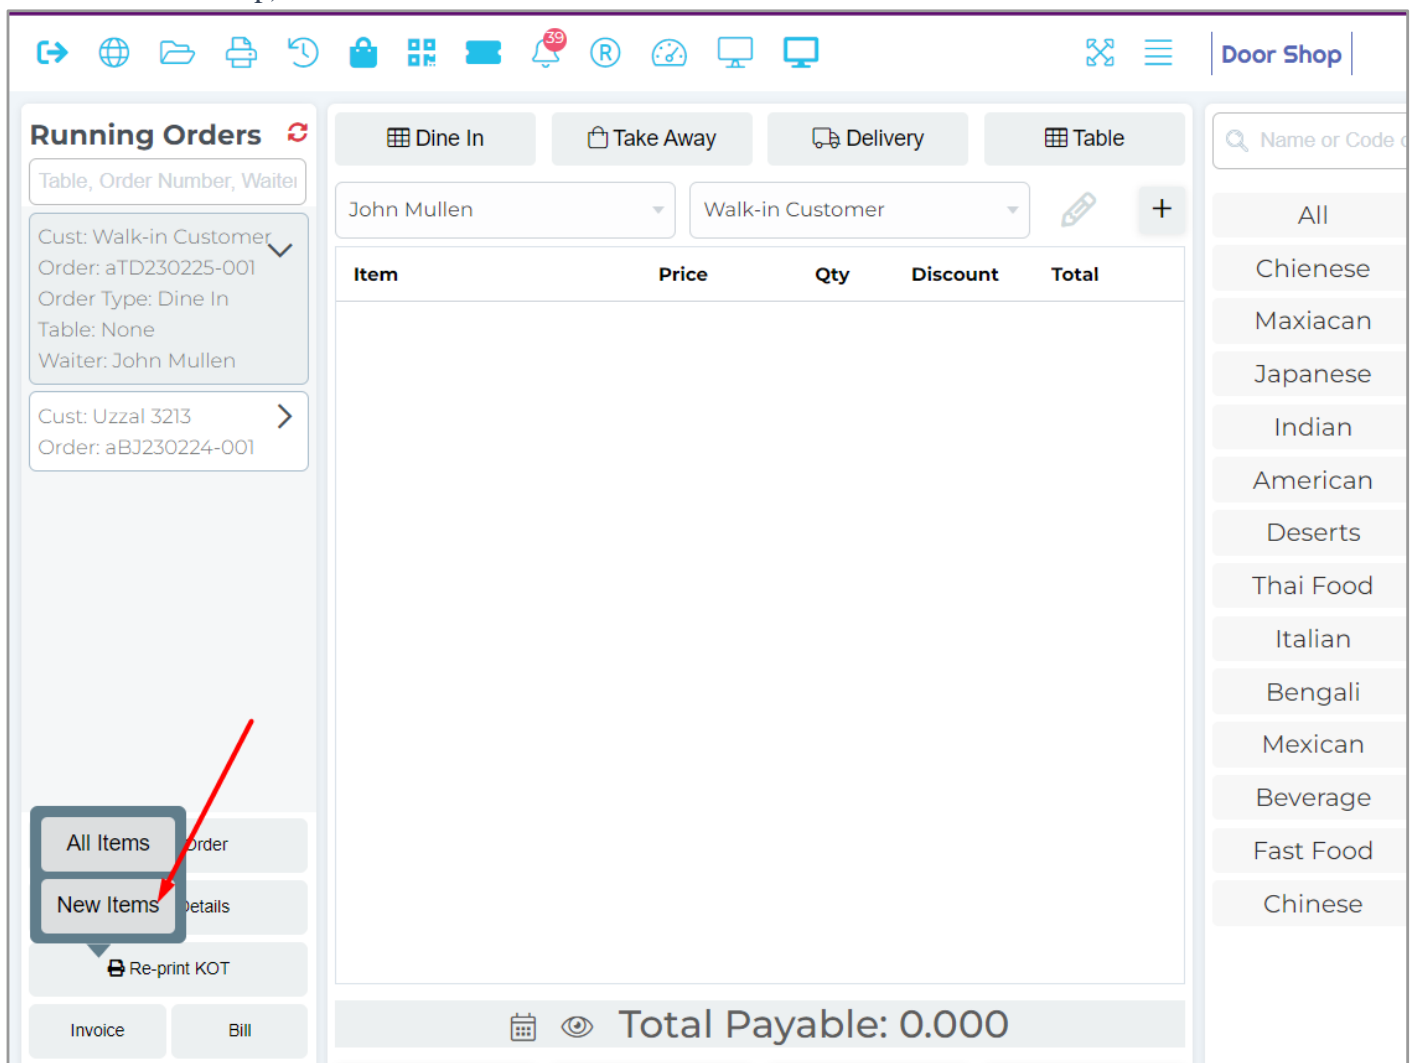

You can add a preparation note for the chef for any food before you start cooking.

You can add a preparation note for the chef for any food before you start cooking.

After updating the cart then the system will show that note in KOT or kitchen panel(in case no printer is available in the shop).

For KOT Print Paper.

After removing the item.

# 6.13. Pre and Post Payment System

Here there are two types of ordering processes. One is Prepayment where customers have to pay in advance when ordering the food. In the Post Payment option, customers can pay bills after eating or taking the food. You can set any of those based on your restaurant type.

Here in the Settings you can see the "Pre or Post Payment" field. Now select the Pre Payment from here and click submit to save the changes.

# 6.14. How offline sync works

Sometimes the internet may go suddenly in your restaurant and customers are waiting to place their orders. In that very crucial moment our system will work uninterruptedly. It will automatically detect that the internet is gone and start storing data in your local database, you have to do nothing but to continue your ordering process. And when the internet will come again the system will detect that too automatically and send all locally stored data to your server.

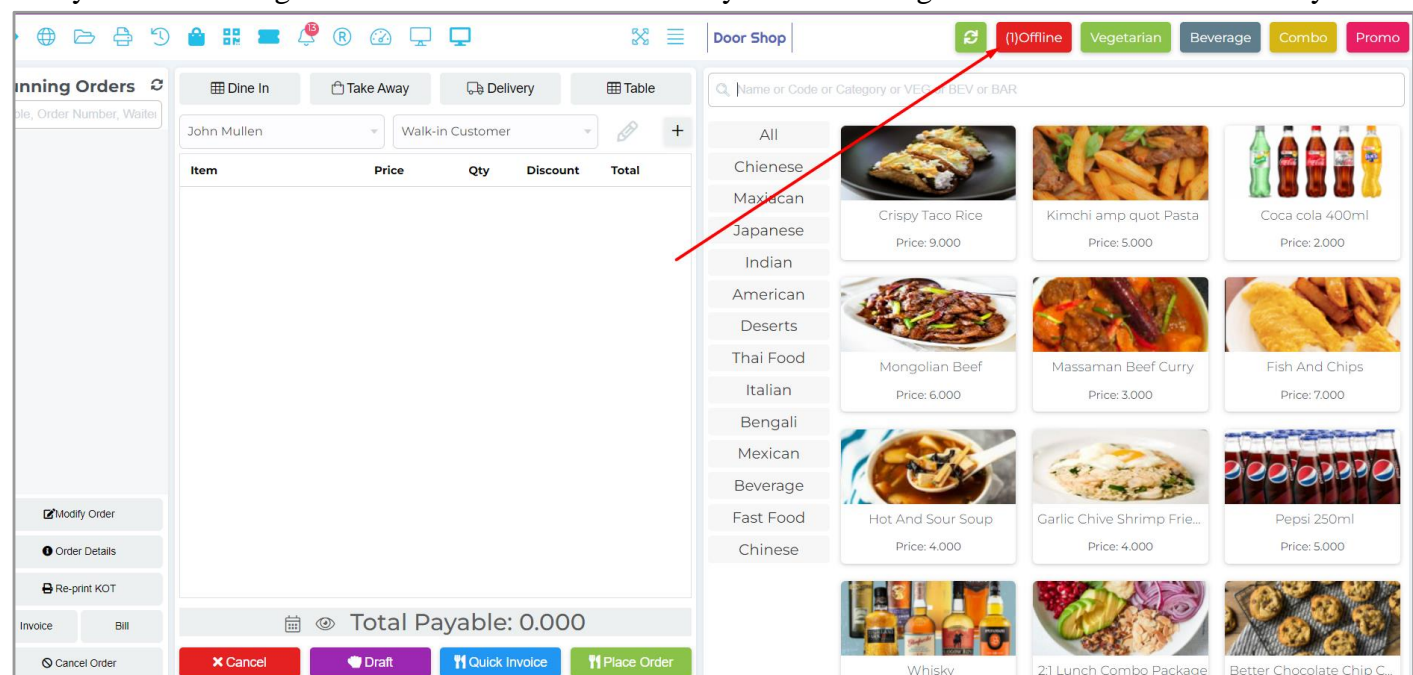

*Note: Don't reload this page when you are in offline mode or not connected with the network.*

When you are connected to the network it will show you like that.

Now what you will see when the system is offline, let's disconnect the internet connection.

Here is 1 means, the system generated an invoice and stored that locally, when the internet connection is back, the system will change the status offline to online and sync the offline generated invoice automatically.

## 7. Kitchen Panel

This system supports food category wise multiple kitchen panels and also panel will tab supported (1280x800px).

Go to "Panel" from the left menu then click "Add Kitchen".

The screenshot shows the 'Door Shop' POS interface. On the left is a sidebar menu with options: Home, Settings, Item, Outlets, Panel, POS, Add Kitchen (highlighted with a red box), List Kitchen, Waiter, Dashboard, Purchase, Production, Transfer, Sale, and Stock. The main area is titled 'Add Kitchen'. It contains a 'Name \* (Just to identify easily)' text input field with a placeholder 'eg: Indian Kitchen, BBQ Kitchen, Chi'. Below this are two dropdown menus: 'Outlet \*' and 'Printer', both currently set to 'Select'. A 'Categories' section follows, featuring a 'Go to List' link and a grid of food categories with checkboxes: Select All, Chienese, Fast Food, Beverage, Bengali, Italian, Thai Food, American, Indian, and Japanese. The 'Chinese' category is also visible at the bottom of the grid.

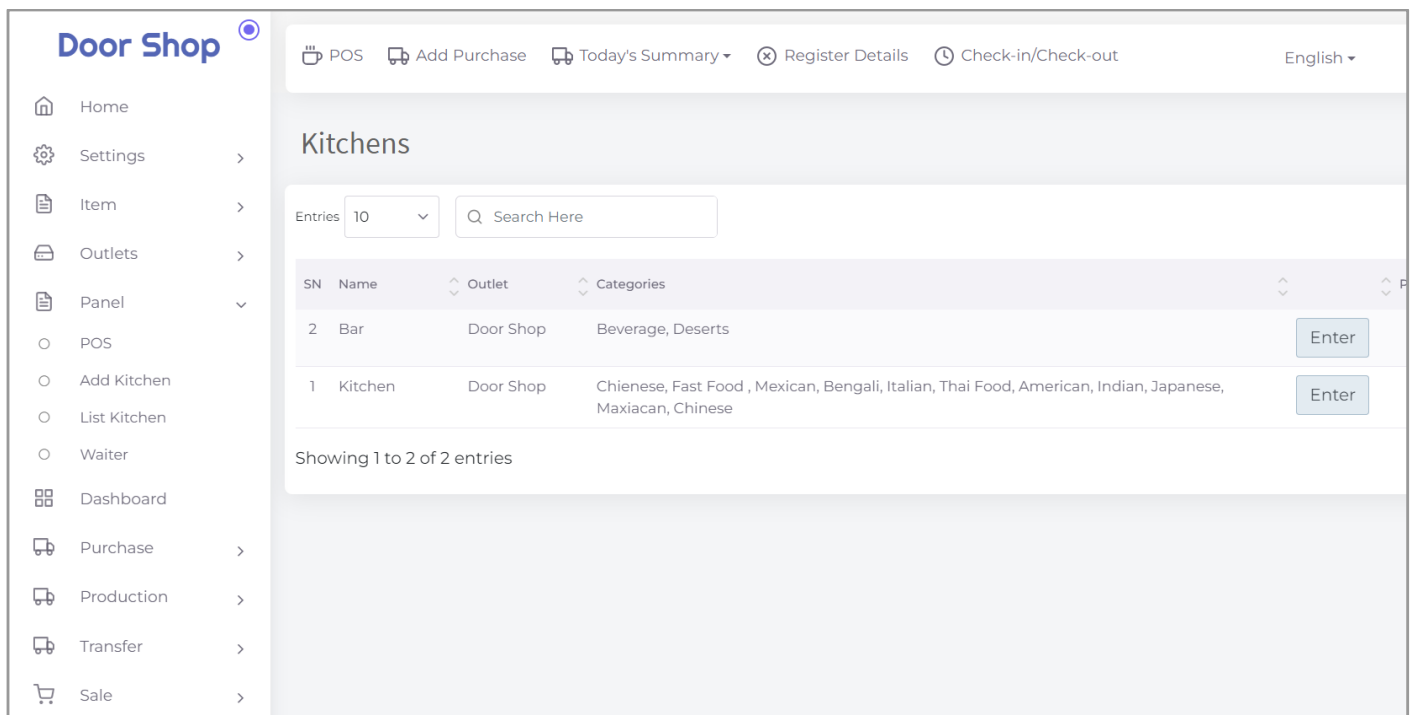

You will need to enter a name for the kitchen panel e.g: Mexican Food, Chinese Food etc and Select the Outlet in case you are using Multi Outlet Version.

You can select one or more categories of food that you prepare in this kitchen. Like you may produce multiple categories of food in one kitchen. E.g: You have 6 categories of foods and you prepare 4 categories of food in one kitchen and another 1 category of food in another kitchen and you have one bar where you produce drinking items.

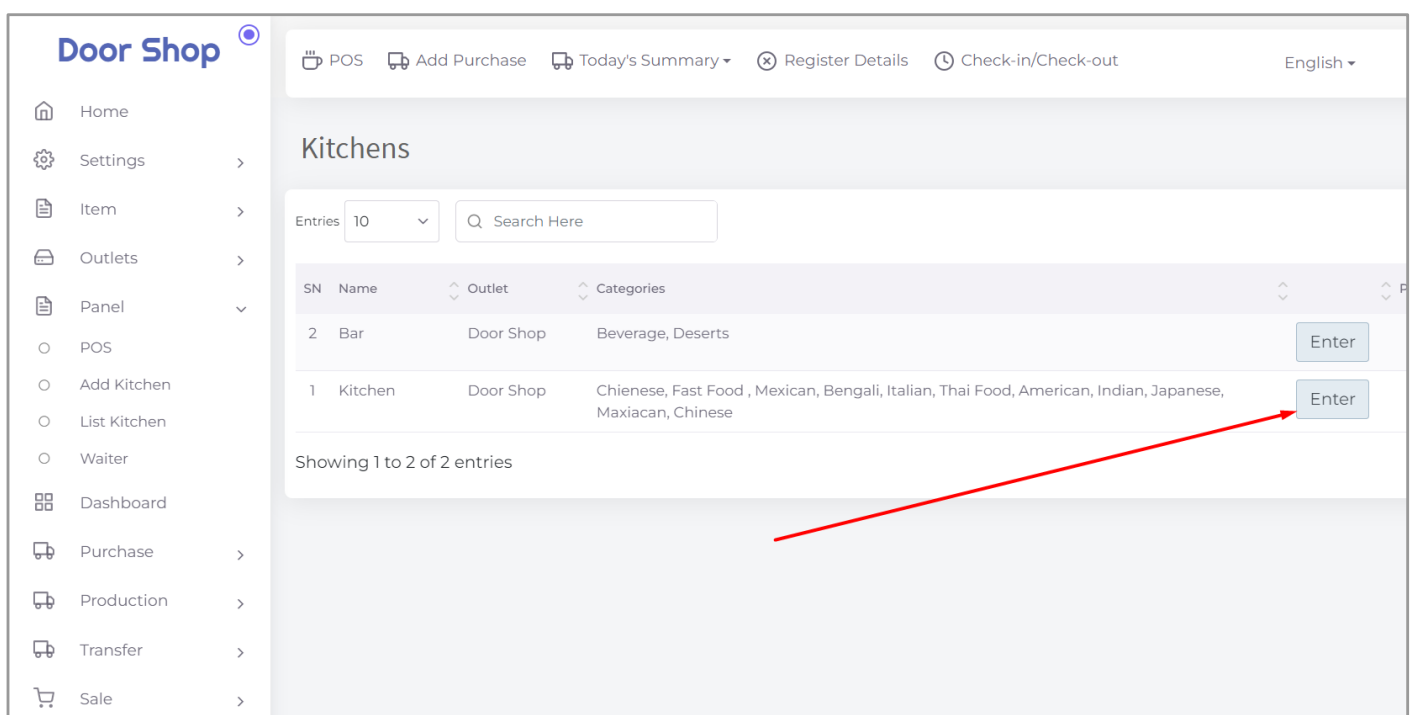

In this case you are going to select 4 categories when creating the first kitchen panel. And when you place an order from POS the first kitchen will show foods of the first 4 categories and will not show other foods and other panels will also show their respective foods only. Like a bar will only show the drink item in your case and skip all other items in its panel.

You need to keep in mind that when you go to add a new panel, you will see only categories that are not selected before when creating other kitchen panels.

For now we will not select any printer. If you intend to use KOT than Kitchen Panel then after completing these please follow the printer setup procedure in the next step.

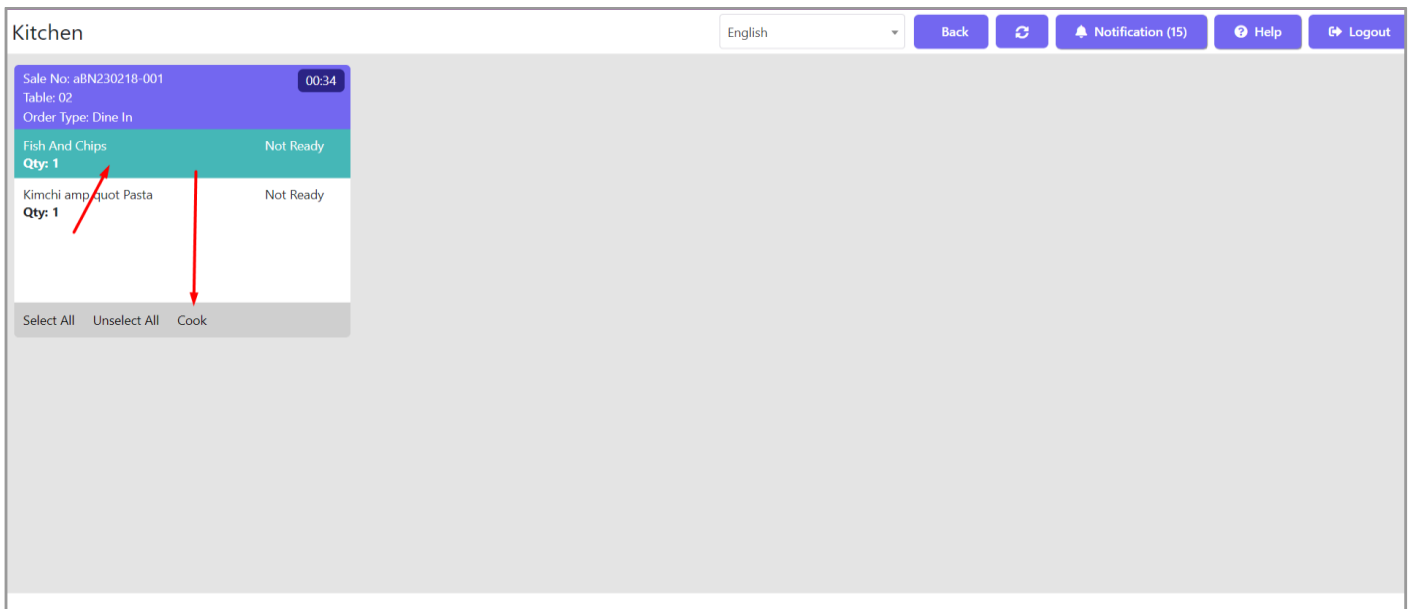

Please enter any Kitchen Panel by clicking on the Enter button.

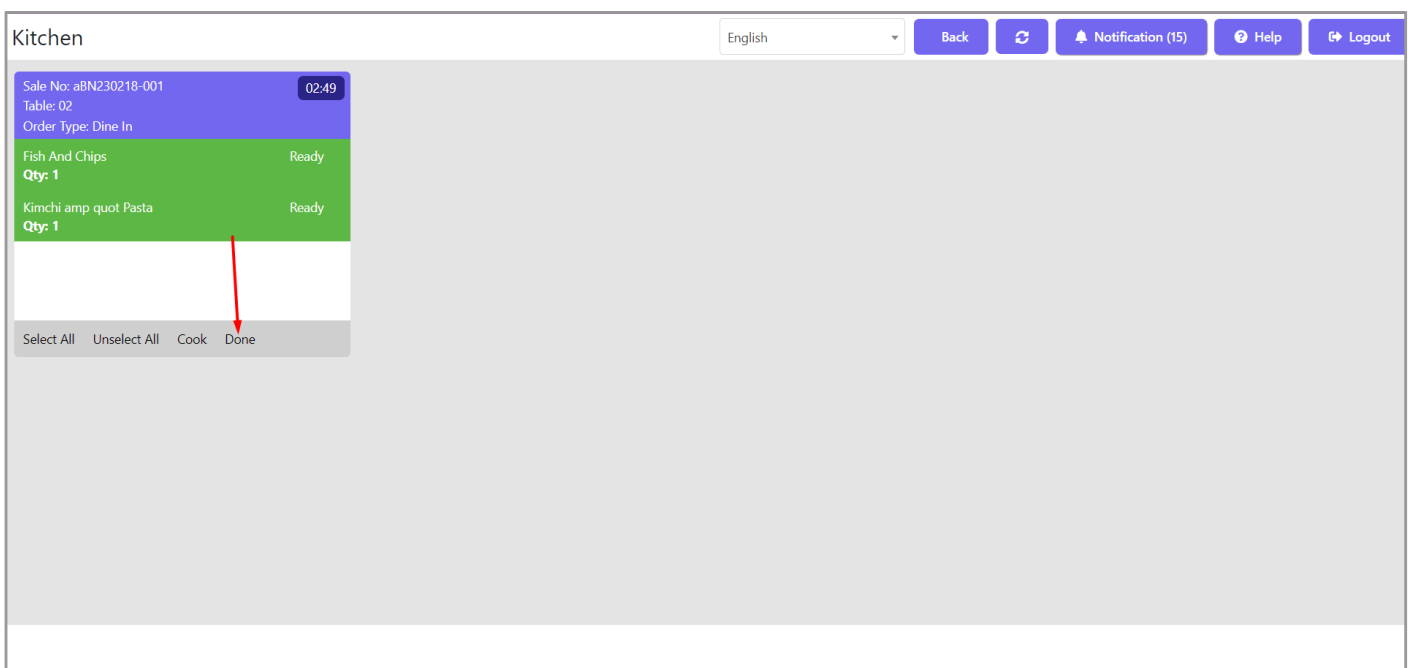

When the chef starts to cook an item he needs to change the status by clicking/tapping on the Cook button. The system will allow you to change the status of a single or all items at a time. For your note, when the Chef changes this status the cashier from POS can not remove that item from the cart by using Modify Order feature, as well as the customer can not cancel that item any more.

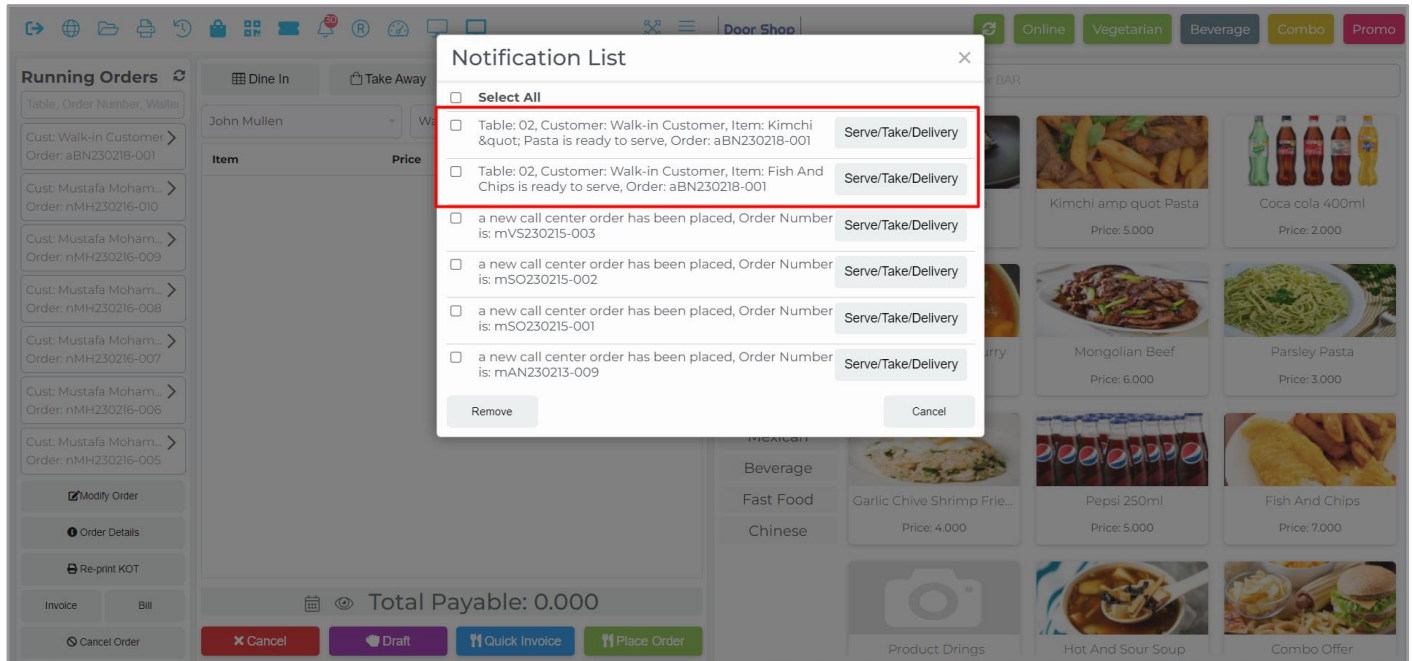

When the chef is done cooking an item he needs to change the status by clicking/tapping on the Done button, system will allow to change the status of a single or all items at a time.

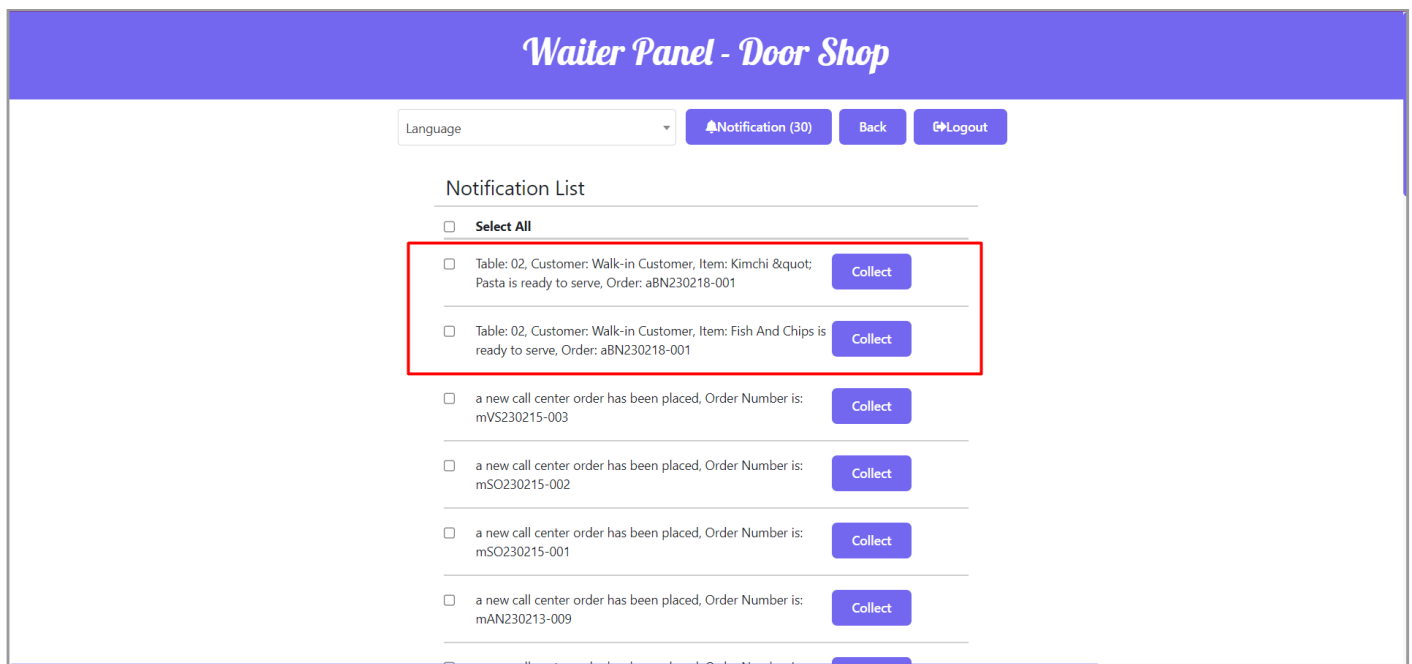

For your note, when the Chef changes this status the cashier from POS can not remove that item from the cart by using Modify Order feature, as well as the customer can not cancel that item any more.

After selecting all and marked as Done then the system will provide a notification in the POS screen and Waiter Panel.

## Waiter Panel:

## 8. Printer

### 8.1. Supports for Printer and Printing Facility

- 56mm and 80mm Thermal Printer Support: System is able to print in 56mm and 80mm thermal printers.
- Network Printer Support with Print Server: System is to print in network printer directly using print server.

Our print server supported printers are:

- 3nStar RPT-008
- Approx APPPOS80AM
- AURES ODP-333
- AURES ODP-500
- Bematech-4200-TH
- Bematech LR2000E

- Xprinter XP-80C
- Xprinter XP-90
- XPrinter XP-Q20011
- Xprinter XP-Q800
- Zjiang NT-58H
- Zjiang ZJ-5870

- Zjiang ZJ-5890 (Also sold as POS-5890 by many vendors; ZJ-5890K, ZJ-5890T also work).
- Zjiang ZJ-8220 (Also marketed as Excelvan ZJ-8220)
- Zjiang ZJ-8250

**Note: in case your printer is not in the above list then you need to make sure that your printer supports the network connection and ESC/POS command.**

- **Browser Popup Printing:** In case you don't have any network printer, you may choose browser popup printing.
- **USB Printing Support:** You can also use a USB Printer for printing.
- **Category wise KOT Printing Support:** System is able to print category wise KOT directly to the kitchen using a network printer. That means when you place any order that contains multiple categories of foods the system will directly send those foods to respective kitchen printers automatically by itself.

## 8.2. Popup Printer Setup (Invoice, Bill and KOT)

For popup printer setup, please check the video.

>> <https://www.youtube.com/watch?v=XM9-ofDABJo>

## 8.3. Direct Print Server Setting

Install xampp and run our print server script. For setup please check our video tutorial step by step, if you miss any step then it maybe will not work.

>> <https://www.youtube.com/watch?v=NpwOAp3oT3Q>

## 8.4. Network Printer Setup (Invoice, Bill and KOT)

Before check this setting, you must need to complete the **8.3 Print Server Setting** first then check this video.

>> <https://www.youtube.com/watch?v=V3Ay0JkBEwY>

## 8.5. USB Printer Setup (Invoice, Bill and KOT)

Before check this setting, you must need to complete the **8.3 Print Server Setting** first then check this video.

>> <https://www.youtube.com/watch?v=KpHdyknH694>

## 8.6. Add Counter

You will able to manage your outlet as per counter, so you will able to use multiple counter with multiple printer at a time.

Here is, you need to select counter, then system will consider all of your transaction counter wise. And also it will print Bill, and Invoice as per your counter.

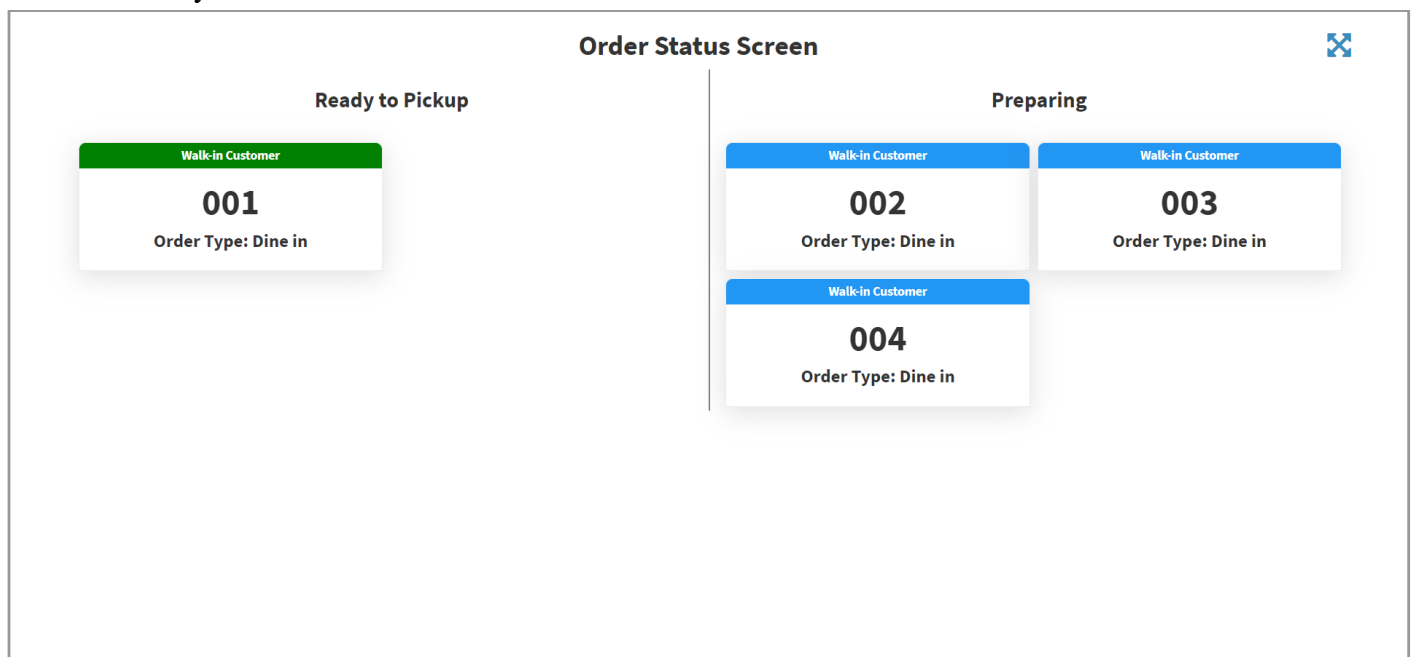

## 9. Order Status Screen

It is a digital screen that displays the status of orders on a smart TV notifying customers when to pick up their orders. Once the order is ready, then the system will show the order on that display.

Go to the POS screen and click on that button.

And then the system will show the Order Status Screen.

Showing order in Preparing after placing an order here. And now go to the kitchen panel and mark as done then the system will show that order in the Ready to Pickup side.

Please follow these steps before you print for first time:  
1. Disable Header and Footer in browser's print setting  
For Firefox: File > Page Setup > Margins & Header/Footer > Headers & Footers > Make all --blank--  
For Chrome: Menu > Print > Uncheck Header/Footer in More Options

## 11.2. Item Modifier with Price, Recipe and Costing

Item modifier is also called **Toppings**. Sometimes customers may ask for some additional small items along with the main dish and those small items are called Item Modifiers. In this system you can have multiple Item Modifiers with their recipe and can calculate costing, set their price etc.

And finally you can assign modifiers to Food Menu items that apply with that food menu.

Please follow below guideline how to add an Item Modifier to the system along with its Recipe, Costing and Price.

Go to "Item" from the left menu, and then click on "Add Modifier".

### Add Modifier

Name \*

Extra Onion

Price \*

3

Ingredient Consumptions

Select

Read Me First

SN	Ingredient	Consumption	Cost	Total	Actions
1	Onion	20 g	0.08	1.60	
2	Onion powder	20 g	0.03	0.60	
Total Cost				2.20	

Description

Enter ...

Here, you can add ingredients with their consumption and cost. And after clicking on submit system will show the modifier data and also you can edit from the actions.

✓ Information has been added successfully!

# 11.4. How modifier works in POS and deducts stock

Only selected Modifiers shown on the POS screen.

Let's select the Onion Ring Modifier for this Food Menu.

Let's see the stock of all ingredients that we add for this Modifier, so go to the Modifier edit form and check all of the ingredients.

### Edit Modifier

Name \*

Onion Ring

Price \*

4

Ingredient Consumptions

Select

Read Me First

SN	Ingredient	Consumption	Cost	Total	Actions
1	Avocado	1 Pcs	2	2.00	
2	Black vinegar	50 g	0.1	5.00	
3	Chicken	5 g	0.1	0.50	
Total Cost				7.50	

Description

Now we will check the stock value for those ingredients, then go to the stock menu.

### Stock

Stock Value: 35914373.680

Before place order stocks was-

- Avocado is 38Pcs
- Black vinegar is 6Kg and 867g
- Chicken is 6Kg and 974g

Used consumption on modifier profile.

- Avocado is 1Pcs
- Black vinegar is 50g
- Chicken is 5g

After place order and generate invoice with 1 Quantity of Onion Ring.

- Avocado is 37Pcs ( $38 - 1 = 37$ )
- Black vinegar is 6Kg and 817g ( $867 - 50 = 817$ )
- Chicken is 6Kg and 969g ( $974 - 5 = 969$ )

## 12. Promotion (Discount and Free Item)

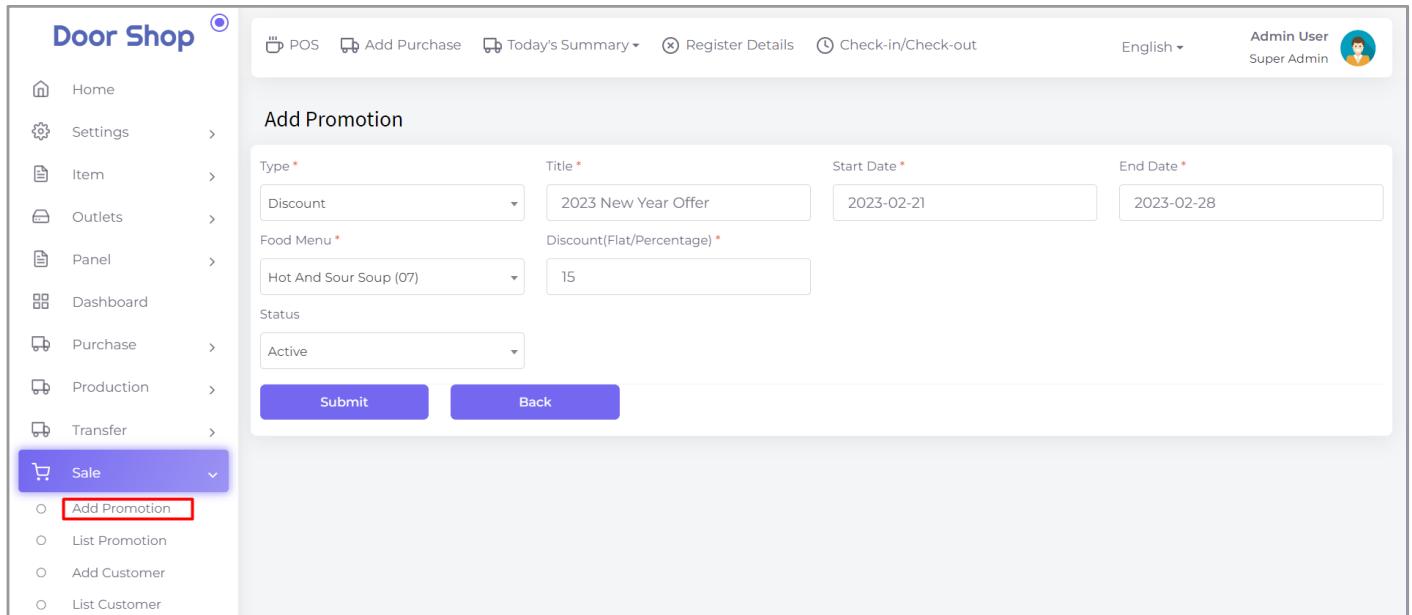

There is a full featured promotion system that supports discount promotion(flat amount/percentage), Buy X Get Y type promotion along with date range and selective items.

You can run multiple promotions on multiple items at a single time and that promotion will be automatically applied when clicking on an item.

Also you can easily see items in POS which have a promotion by clicking on a button.

System will also keep a record of all of your previous promotions and when a promotion's date will be over it will stop applying for promotion automatically.

To set a promotion, go to the Sale menu and click on Add Promotion Menu.

The screenshot shows the 'Door Shop' POS interface. On the left is a sidebar menu with options: Home, Settings, Item, Outlets, Panel, Dashboard, Purchase, Production, Transfer, and Sale. The 'Sale' menu is expanded, showing 'Add Promotion' (highlighted with a red box), 'List Promotion', 'Add Customer', and 'List Customer'. The main area displays the 'Add Promotion' form with the following fields: 'Type' (Discount), 'Title' (2023 New Year Offer), 'Start Date' (2023-02-21), 'End Date' (2023-02-28), 'Food Menu' (Hot And Sour Soup (07)), 'Discount(Flat/Percentage)' (15), and 'Status' (Active). There are 'Submit' and 'Back' buttons at the bottom of the form. The top navigation bar includes links for POS, Add Purchase, Today's Summary, Register Details, and Check-in/Check-out, along with a language dropdown (English) and a user profile (Admin User Super Admin).

Let us try adding Discount type promotion first.

**Title:** This is an identification of the discount.

**Start Date & End Date:** This discount will be applicable with start date to end date only.

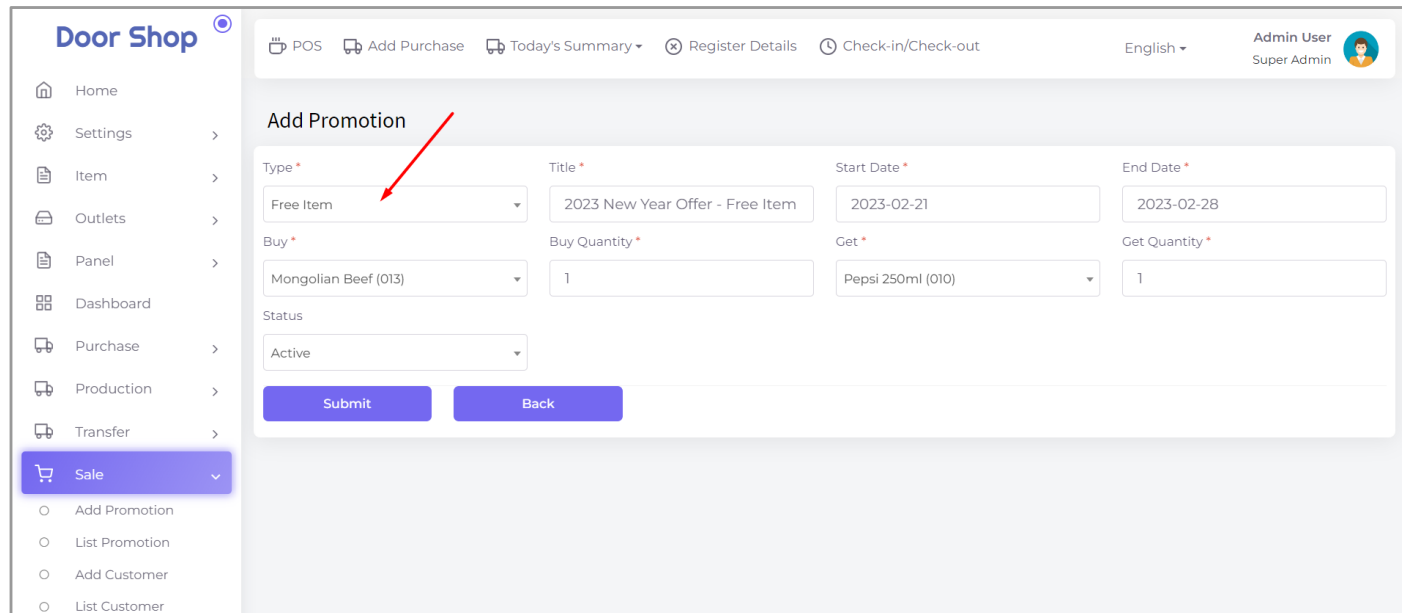

**Food Menu-** Which food menu contains the discount.

**Discount:** Here you will be able to add a flat amount or percentage discount, eg: 10 or 10%, here system will consider 10 means flat amount discount, and 10% means percentage amount.

**Status:** System will allow to active/inactive the promotion as per your need.

Finally save it.

Let us add a Buy X Get Y type promotion.

The screenshot shows the 'Add Promotion' form in the Door Shop Admin Panel. The form includes fields for Type, Title, Start Date, End Date, Buy, Buy Quantity, Get, and Get Quantity. A red arrow points to the 'Type' dropdown menu, which is set to 'Free Item'.

**Add Promotion**

Type \* Free Item Title \* 2023 New Year Offer - Free Item Start Date \* 2023-02-21 End Date \* 2023-02-28

Buy \* Mongolian Beef (013) Buy Quantity \* 1 Get \* Pepsi 250ml (010) Get Quantity \* 1

Status Active

Submit Back

Here is:

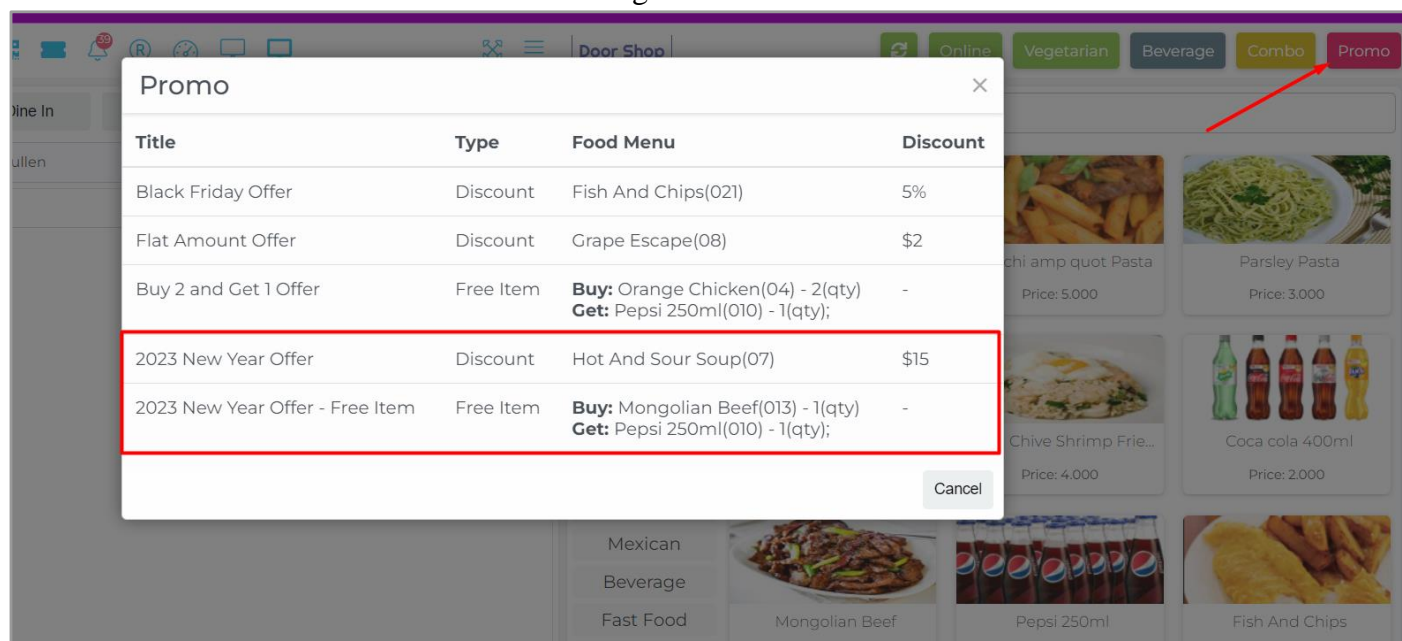

Buy: Which food menu customer will buy.

Buy Quantity: How many quantities need to buy to be eligible for the promotion.

Get: Which food menu will get.

Get Quantity: How many quantities will get after reaching the Buy quantity.

Now let's see how it works in POS. After clicking on the Promo button.

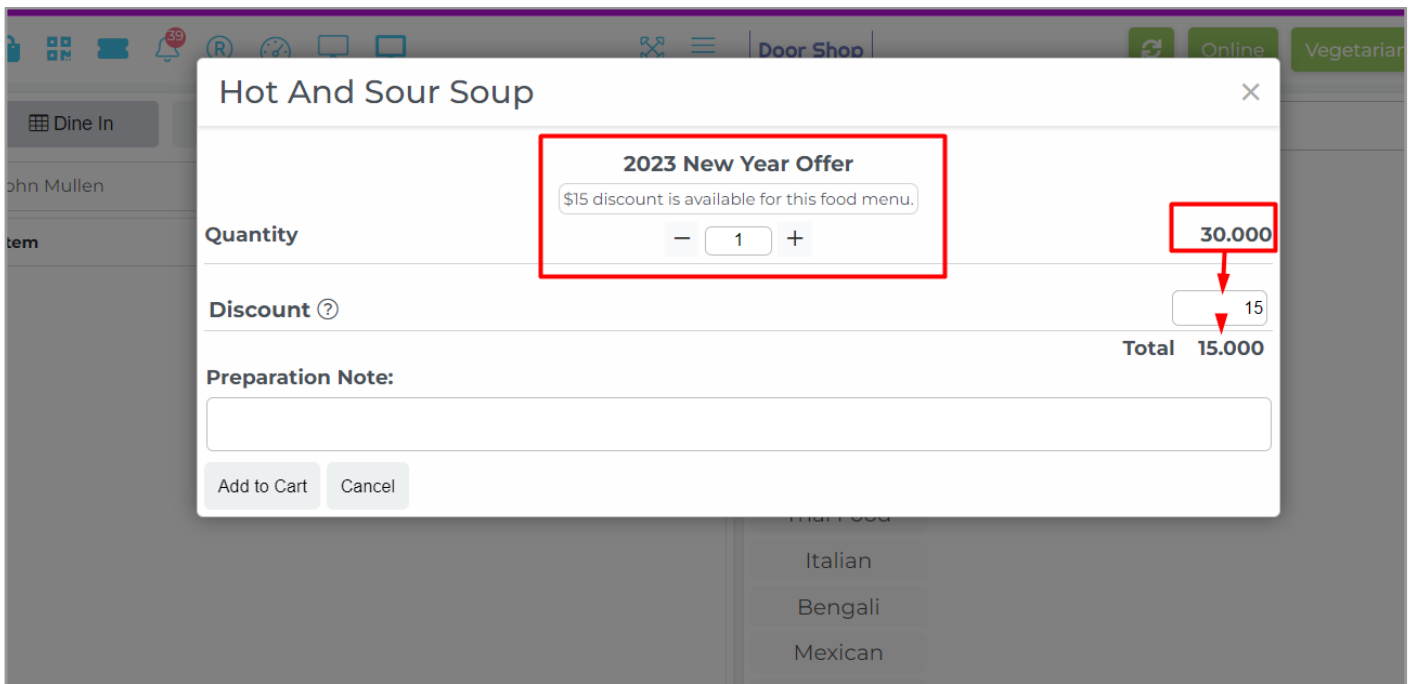

The screenshot shows the Door Shop POS interface. A red arrow points to the 'Promo' button in the top navigation bar. The 'Promo' modal is open, displaying a list of promotions. The '2023 New Year Offer - Free Item' promotion is highlighted in red.

**Promo**

Title	Type	Food Menu	Discount
Black Friday Offer	Discount	Fish And Chips(021)	5%
Flat Amount Offer	Discount	Grape Escape(08)	\$2
Buy 2 and Get 1 Offer	Free Item	<b>Buy:</b> Orange Chicken(04) - 2(qty) <b>Get:</b> Pepsi 250ml(010) - 1(qty);	-
2023 New Year Offer	Discount	Hot And Sour Soup(07)	\$15
2023 New Year Offer - Free Item	Free Item	<b>Buy:</b> Mongolian Beef(013) - 1(qty) <b>Get:</b> Pepsi 250ml(010) - 1(qty);	-

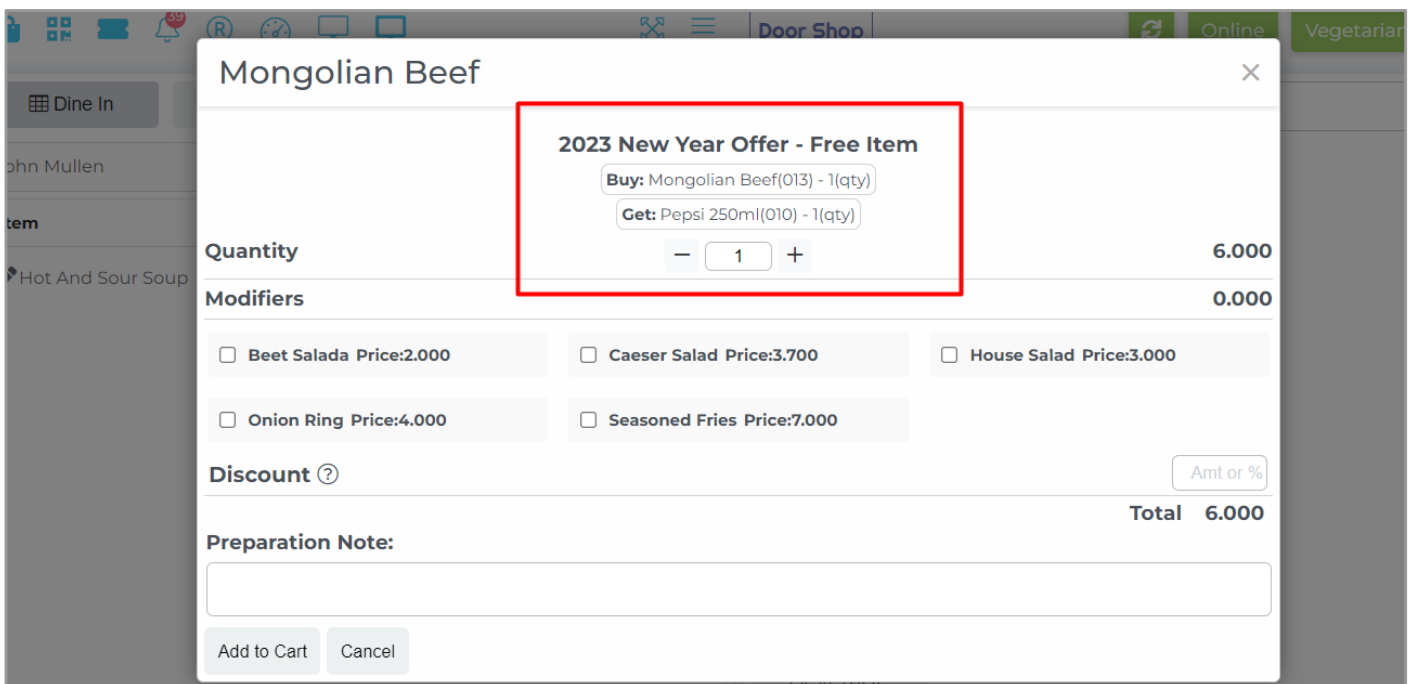

Cancel

Let's add those food menus in the cart.

Food Menu price was 30 and discount was 15 now total price is 15.

Now add another food menu.

Now a free item showing in the cart. Note that the system will not allow you to remove the applied promo item from the cart until you remove the main ordered item.

## 13. Delivery Management

### 13.1. Delivery Partner Management

*Note: if you have no delivery partner and you manage your deliveries by yourself then no need to add a delivery partner and the system will show your own delivery price field on the food menu add/edit form and outlet edit form.*

Go to "Setting" from the left menu, and then click on "Add Delivery Partner".

The screenshot shows the 'Add Delivery Partner' form in the Door Shop POS system. The left sidebar menu has 'Settings' highlighted, and 'Add Delivery Partner' is selected. The main form area has the title 'Add Delivery Partner'. It contains three input fields: 'Name' (with 'Uber Eats' entered), 'Logo' (with a 'Choose File' button and 'No file chosen' text), and 'Description' (with a 'Description' placeholder). Below these fields are 'Submit' and 'Back' buttons. The bottom right corner of the screen displays 'iRestora PLUS - Next Gen Restaurant POS'.

Now this Delivery Partner will be shown in the food menu add/edit form.

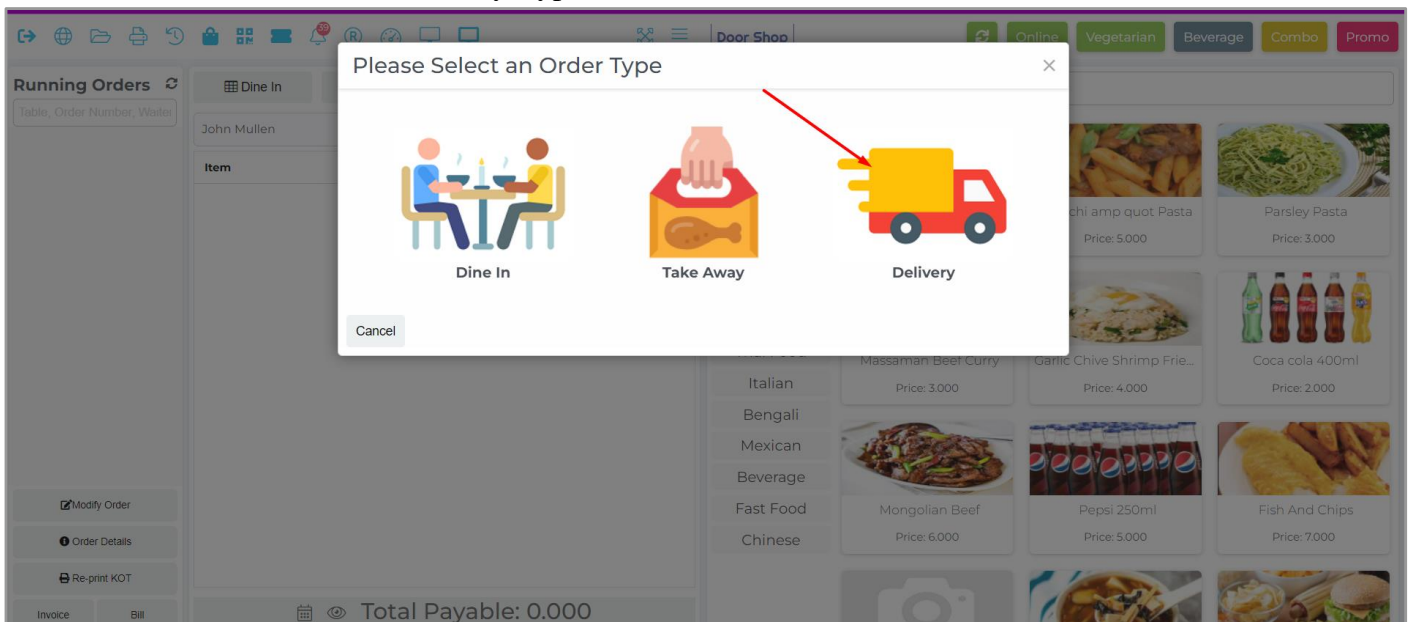

The screenshot shows the 'Add Food Menu' form in the Door Shop POS system. The left sidebar menu has 'Item' highlighted, and 'Add Food Menu' is selected. The main form area has the title 'Add Food Menu'. It contains several input fields: 'Ingredient Consumptions' (with a 'Select' dropdown and 'Read Me First' button), 'Sale Price (Dine In)', 'Sale Price (Take Away)', 'Sale Price (Delivery)', 'Description', 'Photo' (with a 'Choose File' button and 'No file chosen' text), 'Is it Veg Item?', and 'Is it Beverage?'. Below the 'Sale Price (Delivery)' field, there is a list of delivery partners: Instacart, Tim Hortons, DoorDash, Grubhub, Uber Eats, and Pathao Food Rider. The 'Uber Eats' option is highlighted with a red box.

Add a food menu with different prices as per your delivery partners.

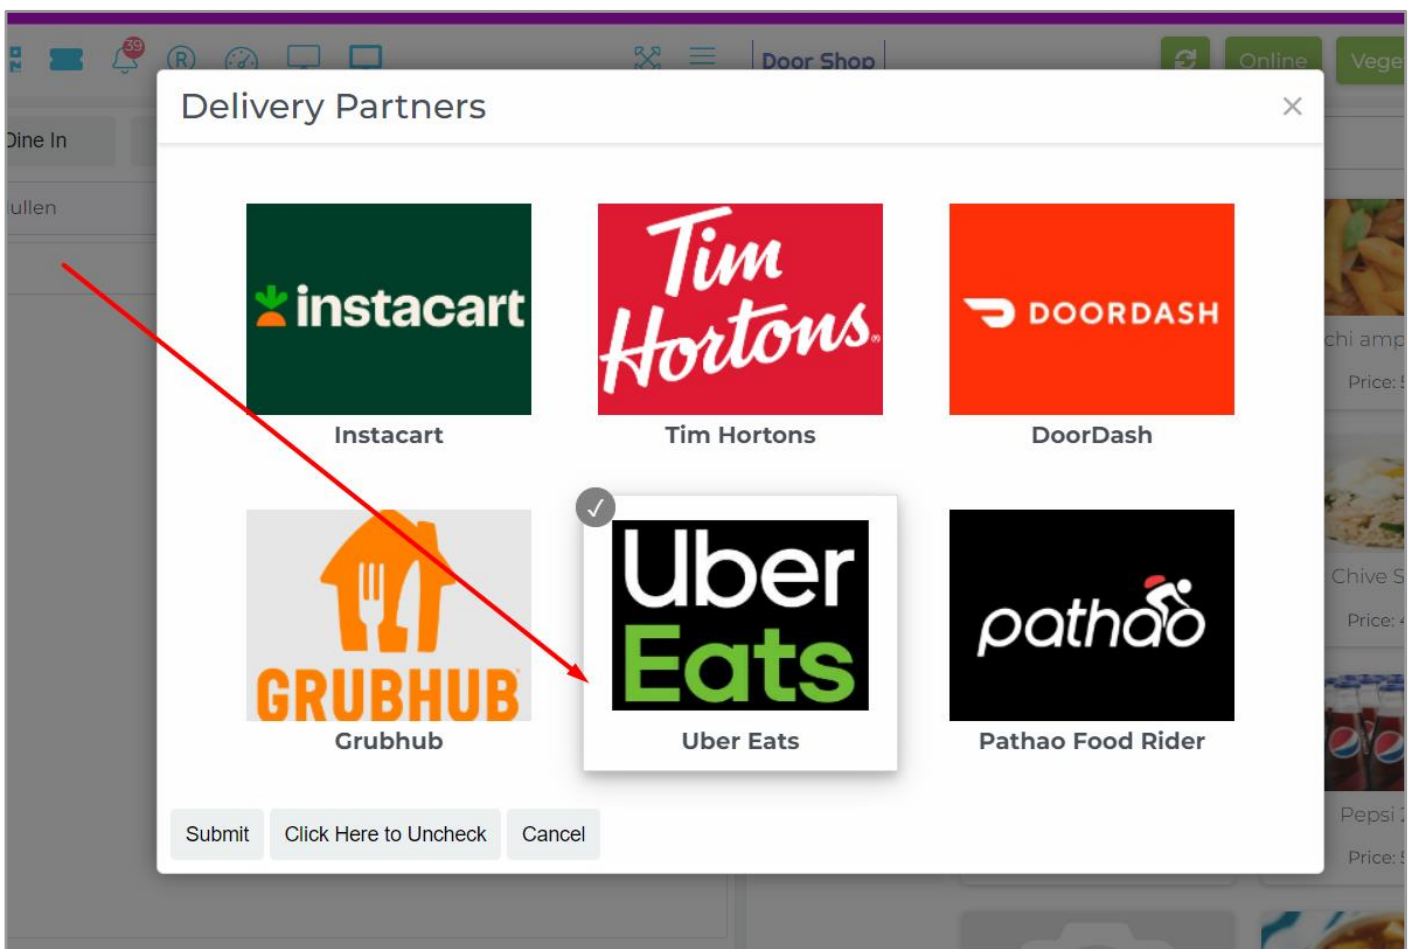

## 13.2. Different Price for Different Delivery Partners

If you have delivery partners and already set the different types of prices for each delivery partner then the system will consider the different price for different delivery partners.

Go to the POS screen and add Delivery Type and add the item.

Now the system will show the delivery partners in case you have any delivery partners otherwise the system will not show the modal and system will consider your own delivery price.

### 13.3. Delivery Status

Add an order with delivery type then the system will show the delivery status in invoice.

System will consider as a select on the new order that we delivered the previous order. And we will be able to reuse the previous order as per customer request.

## 14. Combo Item

You can create a food item that will be a combination of multiple food items. That is called a combo item. E.g: You make a combo meal that contains a Fried Rice, a Beef Chilli Onion, a Cashio Nut Salad and a Cold Drinks.

Sometimes Combo Items are called Set Menu.

To create a combo item please go to the food menu and select Combo from Food Menu Type. Then you will get the option to select food menus rather than ingredients.

Remind that when you sell a combo item, the ingredients stock of all food items of that combo item will get deducted from POS.

# 15. Item Variation

The system supports a robust feature of item variation where not only you can add multiple variants of an item but also the ingredients can be different, tax can be different, price can be different, easy variation creating features and easy identification code of same item’s variations. Eg: Your main Food Menu is Burger and then you will be able to create Small Burger, Large Burger under parent item etc.

Go to "Item" from the left menu, and then click on "Add Food Menu".

## 16. Product

It happens in a restaurant that you need to sell an item the same as you purchased it from the supplier. And requires no preparation from your end. Like water bottles, cold drinks etc.

These are called products in this system.

Products are specially treated in this system like when you create a product from the food menu the system will automatically create it as an ingredient too and allow you to purchase and sell both for that item.

Go to the "Item" section from the left menu then select the food menu type "Product".

Here additional some fields need to be understood. And the system will add an ingredient with the same name automatically if you add the product type food menu.

**Purchase Price:** System will consider this field in the ingredient profile.

**Low Quantity:** System will consider this field in the ingredient profile to separate the low stock manager.

**Ingredient Category:** System will consider this field in ingredient profile.

Let's save it.

# 17. Loyalty

## 17.1. Loyalty Setting

Go to your "Settings" from the left menu to set the loyalty setting.

The screenshot shows the 'Door Shop' settings interface. On the left is a sidebar menu with options: Home, Settings (highlighted with a red box), White Label, Printer, Tax Setting, Add Multiple Currency, List Multiple Currency, License Uninstall, Self Order Setting, Online Order Setting, Reservation Setting, Add Payment Method, List Payment Method, Add Denomination, List Denomination, Add Delivery Partner, and List Delivery Partner. The main content area contains various configuration fields. A red box highlights the 'Loyalty' section, which includes: 'Loyalty Point' set to 'Enable', 'Minimum Loyalty Point to Redeem' set to '40', and 'Loyalty Point Rate' set to '0.5'. Other visible settings include Date Format (D/M/Y), Time Zone (Asia/Dhaka), Currency Symbol (\$), Currency Position (After Amount), Precision (3 Digit), Decimals Separator (Dot(.)), Thousands Separator (Dot(.)), Default Order Type (None), Default Delivery Partner (None), Default Customer (Walk-in Customer), Default Payment Method (Cash), Place Order Tooltip (Show), Food Menu Tooltip (Show), SMS Send Auto (Yes), Pre or Post Payment (Post Payment), Service Charge (10%), Delivery Charge (15%), and an 'Export Daily Sales & Reset All Sales' toggle (Enable). A 'Reset Transactional Data' button is also present.

**Loyalty Point:** Select Enable from here to enable loyalty features in your system.

**Minimum Loyalty Point to Redeem:** Define the Minimum Loyalty Point to Redeem.

**Loyalty Point Rate:** Define 1 loyalty point is equal to how much money as per your currency.

# 17.2. Loyalty Point for Each Item

Go to your "Item" from the left menu and go to the food menu add/edit form. You will be able to set the loyalty point for each item. System will get the loyalty point when customers earn it during order.

### 17.3. Customer Loyalty Account

Place an order with a food that has loyalty points and then select a customer except Walk-in Customer. And at the first order you will not see any available loyalty points in the customer account but from the next order you will be able to see available loyalty points that this customer earned from his previous orders.

First order with a loyalty point available food menu. Now generate the invoice for first earning the loyalty point.

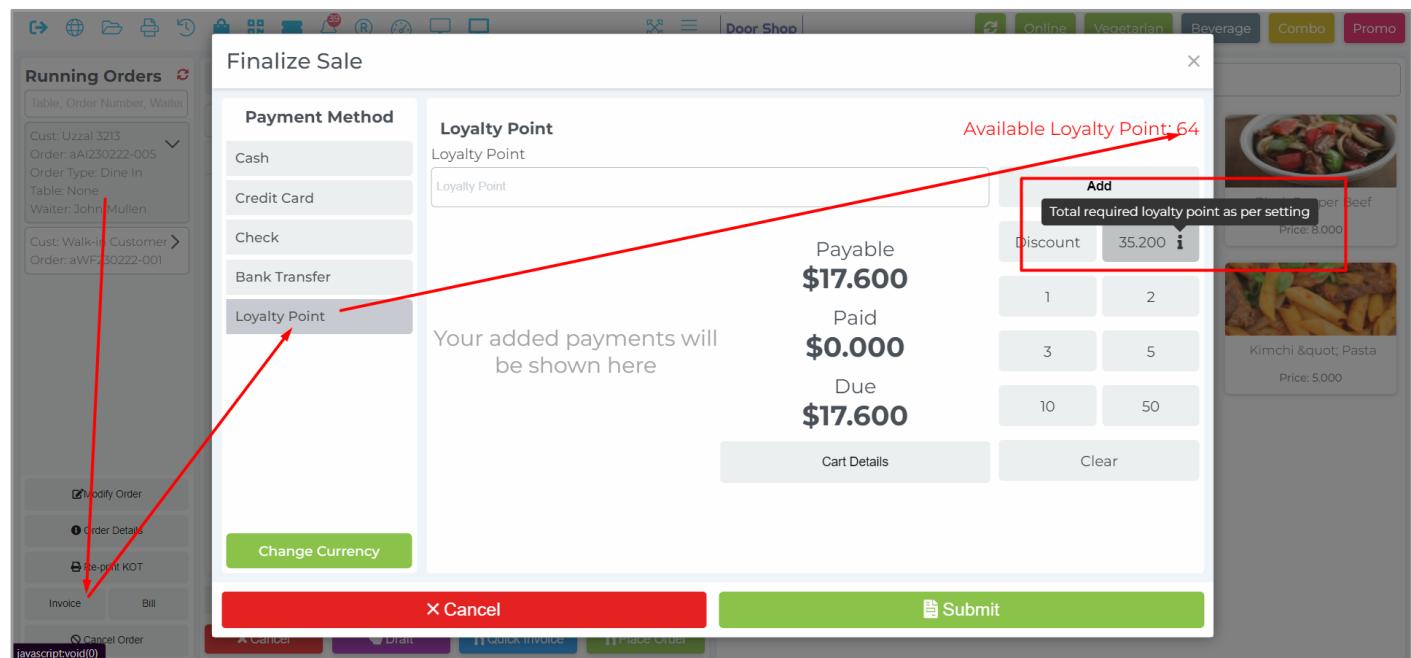

Let's make a second order with the same customer.

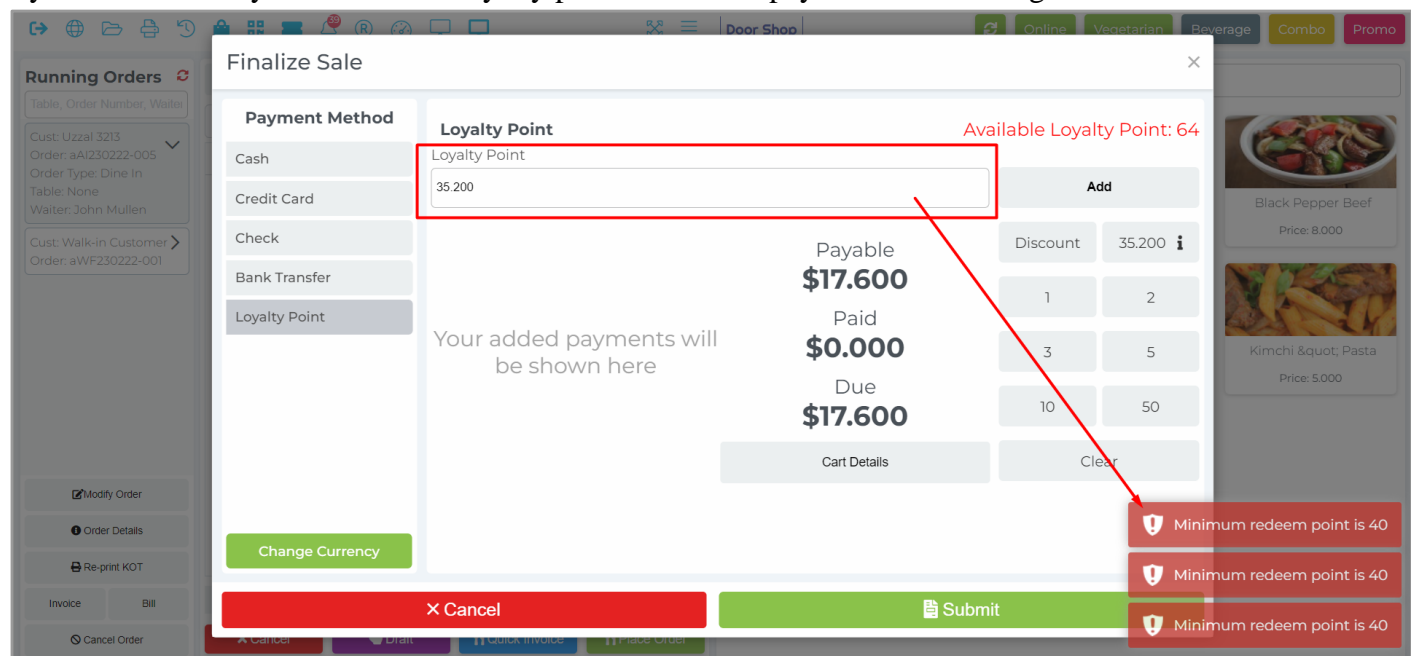

# 17.4. Redeem Loyalty Point

Customers need to earn a minimum 40 loyalty points for redeem as per our setting.

Let’s finish the last order then this customer will earn 32+32 = 64 loyalty points. And then place another order to redeem loyalty points and other’s payment method.

System will allow you to add both loyalty points and other payment methods together in one order.

System not allow less than 40 loyalty points due to setting, in setting our minimum usage loyalty point was 40. So we need to increase the order amount to increase usage loyalty points required.

## 18. Pre-made Food and Production

Pre-made food is also food that is used to make final food. Like you use pizza dough to make pizza, here pizza dough is pre-made food. A pre-made food has its own ingredients to prepare and it has its own stock. So when you make a pre-made food, ingredients used for that pre-made food get deducted from stock and stock of the pre-made food gets increased when you will do it as a production final. And also as you use that pre-made food same as an ingredient in a food so when you make sale of that food item that pre-made food stock also gets down.

Click on "Add Pre-Made Food" to add a pre-made food item.

To Outlet means, which outlet will get the ingredients. Sender will allow you to select draft and Sent status, if they select draft then the system will not show the ingredients in the receiver panel but when select the Sent status then the system will show the ingredients in the receiver panel. Lets go to the KFC Zone outlet

for checking the transfer stock.

## 25. Stock

### 25.1. Stock

Using this module you can see how many ingredients you have in store. Also when purchasing any ingredient it will add to the stock.

SN	Ingredient(Code)	Category	Stock Qty/Amount	Low Qty/Amount
133	Pizza doe(133)	Others	1,000 Kg	10,000 Kg
132	Pepci 1000ml(133)	Others	16,000 Pcs	2,000 Pcs
131	Product Drings(131)	Others	0,000 Pcs	1,000 Pcs
130	Beef Bulgogi(130)	Meat	7,000 Kg	1,000 Kg
129	Marinated roast chicken(129)	Meat	5,000 Kg	10,000 Kg
128	Avocado (IG-130)	Fruit	39,000 Pcs	10,000 Pcs
127	Thick-cut ham(IG-129)	Others	5,000 Kg 0,000 g	10,000 Kg
126	English muffins(IG-128)	Others	1,000 Box 0,000 Pcs	10,000 Box
125	Perfect Hollandaise sauce(IG-127)	Spicery	2,000 Kg 0,000 ml	10,000 Kg
124	Thai sweet chili sauce(IG-126)	Spicery	2,000 Kg 990,000 g	10,000 Kg

You may search your ingredients in the Filter By button.

The stock value is the sum of Total of all ingredients. Where the Total is calculated by multiplying the stock quantity and unit price.

And here is the formula for calculating unit price:

If the ingredient is purchased before then the system will calculate the average of the last 3 purchases and that will be the Unit Price but if there are only 2 purchases there, the system will calculate the average of that two, or if there is only one purchase, the system will consider that purchase price as Unit Price. Remember that the system will always consider dividing the purchase price by the conversion rate if the ingredient's purchase unit is different from the consumption unit.

And if there is no purchase record of the ingredient then the unit price will come from that ingredient's profile's cost field and will be considered as Unit Price.

## 26. Manage Users with Access Control

You will be able add and manage multiple users and control their access on the full system. System will not allow access to any feature that you do not allow for that user.

We need to add Roles separately like as - for Cashier, Waiter, Admin, Normal User etc.

Let's create a Role.

**Add Role**

Role Name \*

Menu Access \*

☐ Select All

**Account and User**

<input type="checkbox"/> Roles	<input type="checkbox"/> Copy	<input type="checkbox"/> Delete	<input type="checkbox"/> Update	<input type="checkbox"/> View
<input type="checkbox"/> Users	<input type="checkbox"/> Add	<input type="checkbox"/> Deactivate	<input type="checkbox"/> Delete	<input type="checkbox"/> Update
<input type="checkbox"/> Change Profile	<input type="checkbox"/> Update			
<input type="checkbox"/> Change Password	<input type="checkbox"/> Update			

Here the Role name means the identifying the role like Role for Cashier, Role for Waiter etc.

If you create a role with only access to the POS screen then the system will hide all of the menus and restrict them except POS and user can access only POS.

**Door Shop**

**Panel**

<input checked="" type="checkbox"/> POS	<input checked="" type="checkbox"/> Accept Self Order	<input checked="" type="checkbox"/> Add Customer	<input checked="" type="checkbox"/> Cancel Order	<input checked="" type="checkbox"/> Close Register	<input checked="" type="checkbox"/> Create Invoice	<input checked="" type="checkbox"/> Decline Self Order
<input checked="" type="checkbox"/> Delete Item From Cart When Modifying Order	<input checked="" type="checkbox"/> Delete Recent Sales	<input checked="" type="checkbox"/> Edit Customer	<input checked="" type="checkbox"/> Enter Tips	<input checked="" type="checkbox"/> Go to Dashboard	<input checked="" type="checkbox"/> Re-print KOT	
<input checked="" type="checkbox"/> Main Menu	<input checked="" type="checkbox"/> Modify Self Order	<input checked="" type="checkbox"/> Modify Future Sale	<input checked="" type="checkbox"/> Modify Order	<input checked="" type="checkbox"/> Modify Service/Delivery Charge	<input checked="" type="checkbox"/> Place Order	
<input checked="" type="checkbox"/> Print Bill	<input checked="" type="checkbox"/> Print Last Invoice	<input checked="" type="checkbox"/> Provide Discount	<input checked="" type="checkbox"/> Remove Kitchen Notification	<input checked="" type="checkbox"/> Set as Running Order in Future Sale		

Select the Role when we create the user.

**Door Shop**

Here

### Designation-

**Admin:** Generally this is an admin type user but this user can access as much access as you provide.

**Cashier:** Same as admin but exception is when you select this for someone then he will appear in Order Receiving Cashier dropdown for a waiter when you later will go to add a Waiter. And this user will only see his and his waiter's running orders in his running order panel.

**Manager:** Generally this is an admin type user but this user can access as much access as you provide.

**Waiter:** This user can login to the waiter app and when you choose someone as waiter, you will need to select an Order Receiving Cashier if you think this waiter user orders will populate any cashier panel.

**Normal User:** Same as Manager, designation is different so that you can identify easily .

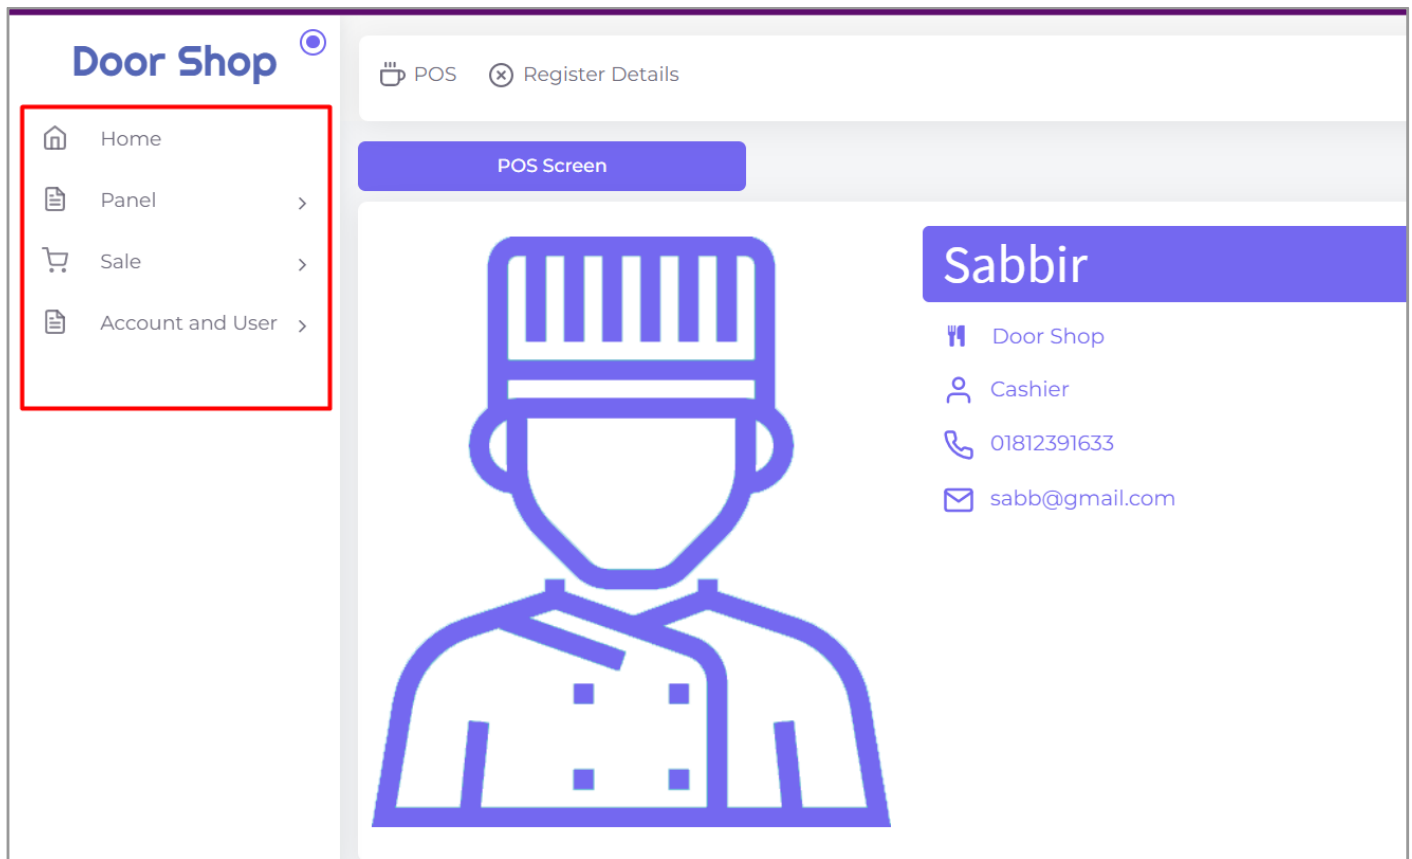

**Others:** Same as Manager, designation is different so that you can identify easily.

You need to select at least 1 outlet(in case you are using a multi outlet version) to access the system and select Role. If you allow login Yes then this user can login the system with their credentials otherwise the system will not allow login in the system.

Order Receiving Cashier means, if your user designation is Waiter then who will get the orders from this Waiter (this dropdown value will only Cashier type user). That means the system will show all orders in the running order section to that selected Cashier and Waiter and the admin always gets all of the orders from other users automatically. It will be necessary when you have multiple cashiers who are dealing with different waiters.

If you set the login pin here then the user can login in the system quickly using this pin from the login page.

What the user will see after they login in the system. Only allowed menus to access will be shown here.

## 27. Expense

### 27.1. Expense Item

Here you can add your expense item name which will show when you are adding your expense to the software.  
eg: shop rent, salary, gas bill, electricity bill etc

For adding expense items go to "Expense" from the left menu and click "Add Expense Item".

## 28. Supplier Due Payment

In case you purchased it before from any supplier and now paying that due to that supplier please enter that here.

Go to "Supplier Due Payment" from the left menu and then click "Add Supplier Due Payment" to pay the due of your suppliers.

The screenshot shows a software interface for adding a supplier due payment. On the left is a sidebar menu with various options: Production, Transfer, Sale, Stock, Waste, Expense, Supplier Due Payment (highlighted in blue), Add Supplier Due Payment (highlighted with a red box), List Supplier Due Payment, Customer Due Receive, Attendance, and Report. The main area is titled 'Add Supplier Due Payment' and contains a form with the following fields: Date (2023-02-24), Supplier (Agro Corporation, with a red box around the dropdown value and a blue tooltip showing '2395.000'), Amount (20), and Payment Method (Cash). There is also a Note field with a placeholder 'Enter ...'. At the bottom of the form are two buttons: 'Submit' and 'Back'.

System will show the due amount when you select the Supplier, this amount is the due amount that you need to pay to that supplier. It is the sum of the due amount of purchases - sum of supplier due payment of a specific supplier.

## 29. Customer Due Receive

In case a customer bought food in due before from you and now he is paying that due to you, please enter that here.

Go to "Customer Due Receive" from the left menu and then click "Add Customer Due Receive" to receive the due of your customer.

The screenshot displays the 'Add Customer Due Receive' interface. On the left, a sidebar menu lists various functions, with 'Customer Due Receive' and its sub-option 'Add Customer Due Receive' highlighted. The main area contains a form with the following fields: 'Reference No' (000001), 'Date' (2023-02-24), 'Customer' (Uzzal 3213), 'Amount' (2), and 'Payment Method' (Cash). A blue box next to the 'Customer' field indicates 'Current Due: 2.200'. At the bottom of the form are 'Submit' and 'Back' buttons. A 'Note' field with the placeholder 'Enter ...' is also present.

System will show the due amount when you select the Customer, this amount is the due amount that the customer needs to pay you.

It is the sum of due amount of sales - sum of customer due receives of a specific customer.

## 32. Online Order

Using this feature system will provide an Online Order URL for each outlet so that customers can order after clicking the URL or you may put the url in your website.

Go to settings from the left menu then click on "Online Order Setting". Here. Enable online order by choosing "Yes" and then click "Online Order URL" to get all of URLs

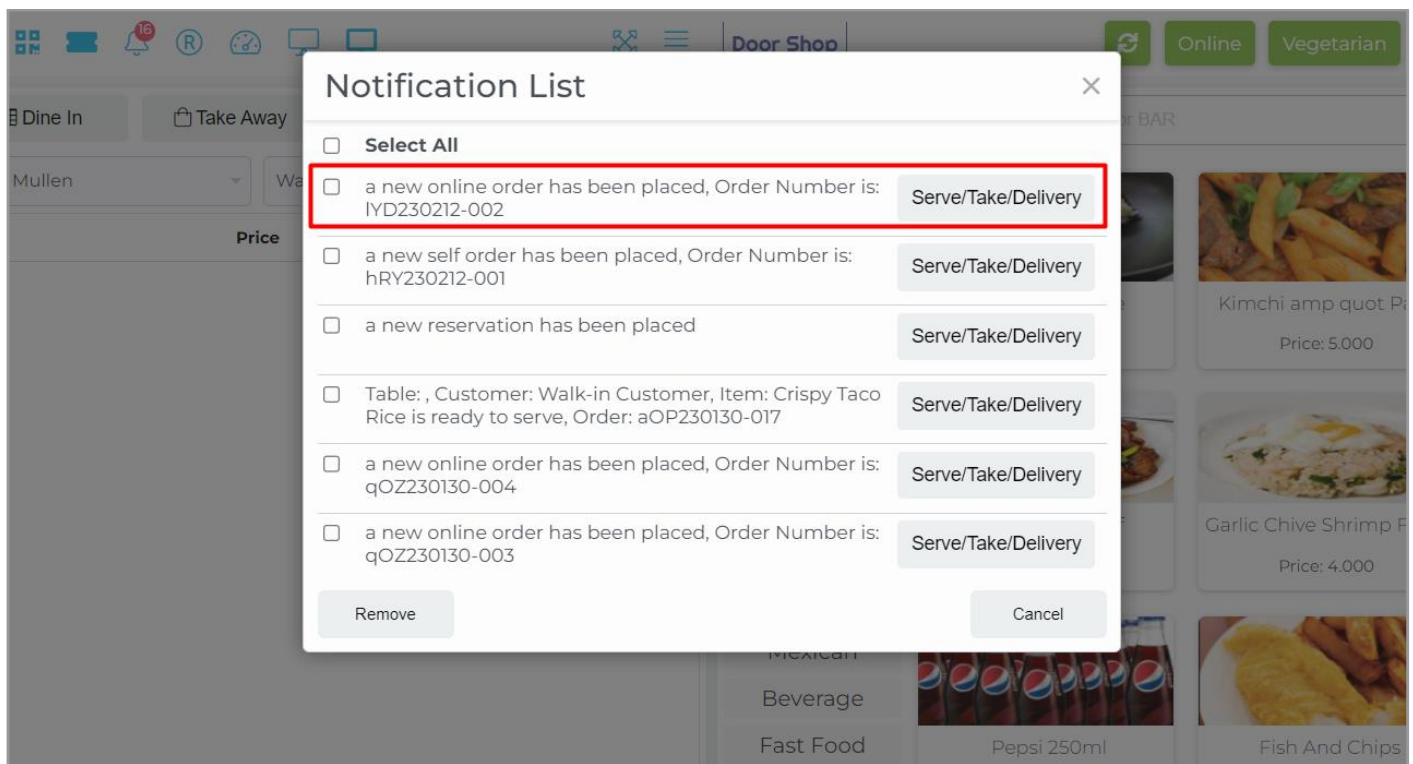

The screenshot displays the 'Door Shop' application interface. On the left, a sidebar menu lists various settings, with 'Online Order Setting' highlighted in a red box. A red arrow points from this box to the 'Enable Self Order' dropdown menu in the main content area, which is currently set to 'Yes'. Another red arrow points from the 'Yes' dropdown to the 'Generate QR-Code' button. The 'Submit' button is also visible. The main content area is titled 'Self Order Setting' and includes a top navigation bar with links to POS, Add Purchase, Today's Summary, Register Details, and Check-in/Check-out.

After clicking on the Online Order URL, the system shows all of the URLs for online order as per outlet.

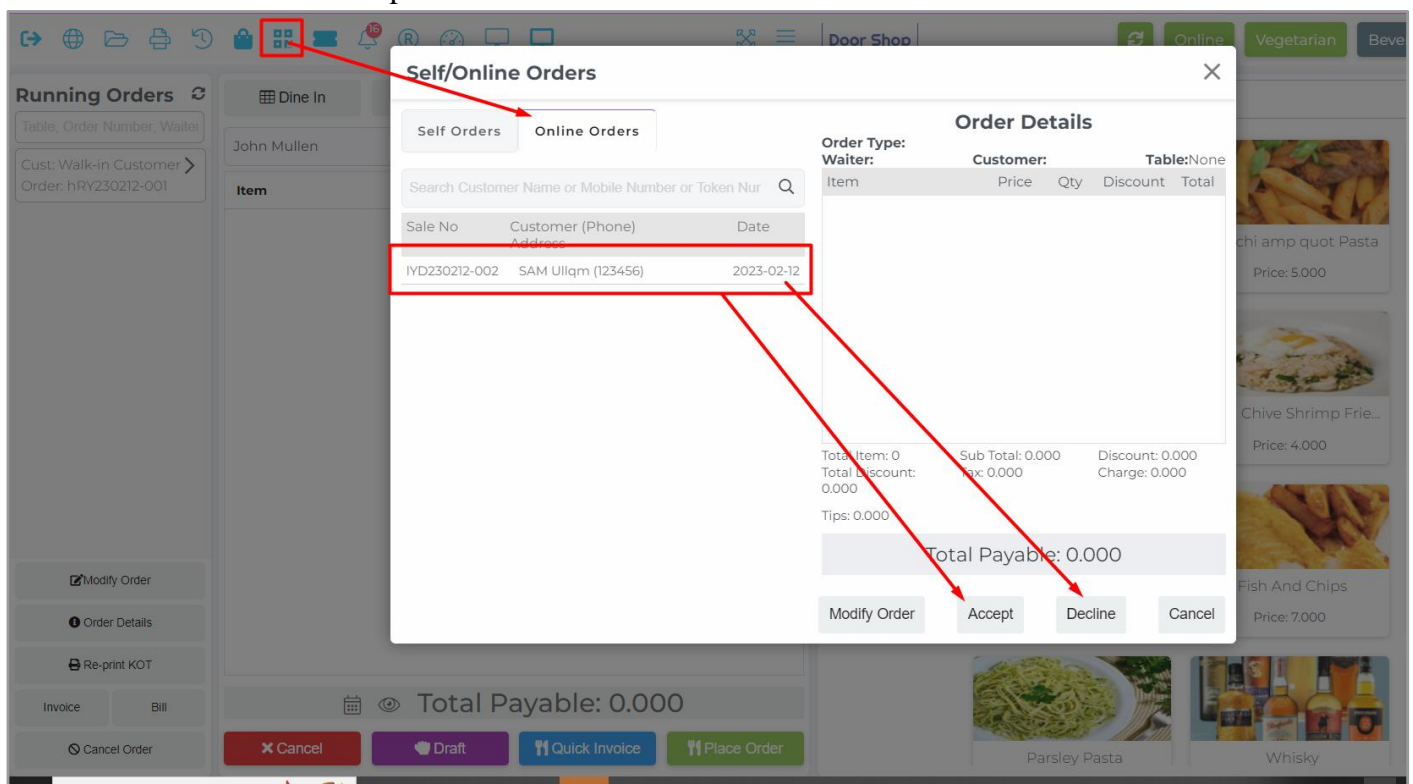

Now Cashier/Admin can accept/decline the online order.

Note: After accepting the order, the system will not allow you to modify the order from customer My Order list.

Now marked as Running Order for processing.

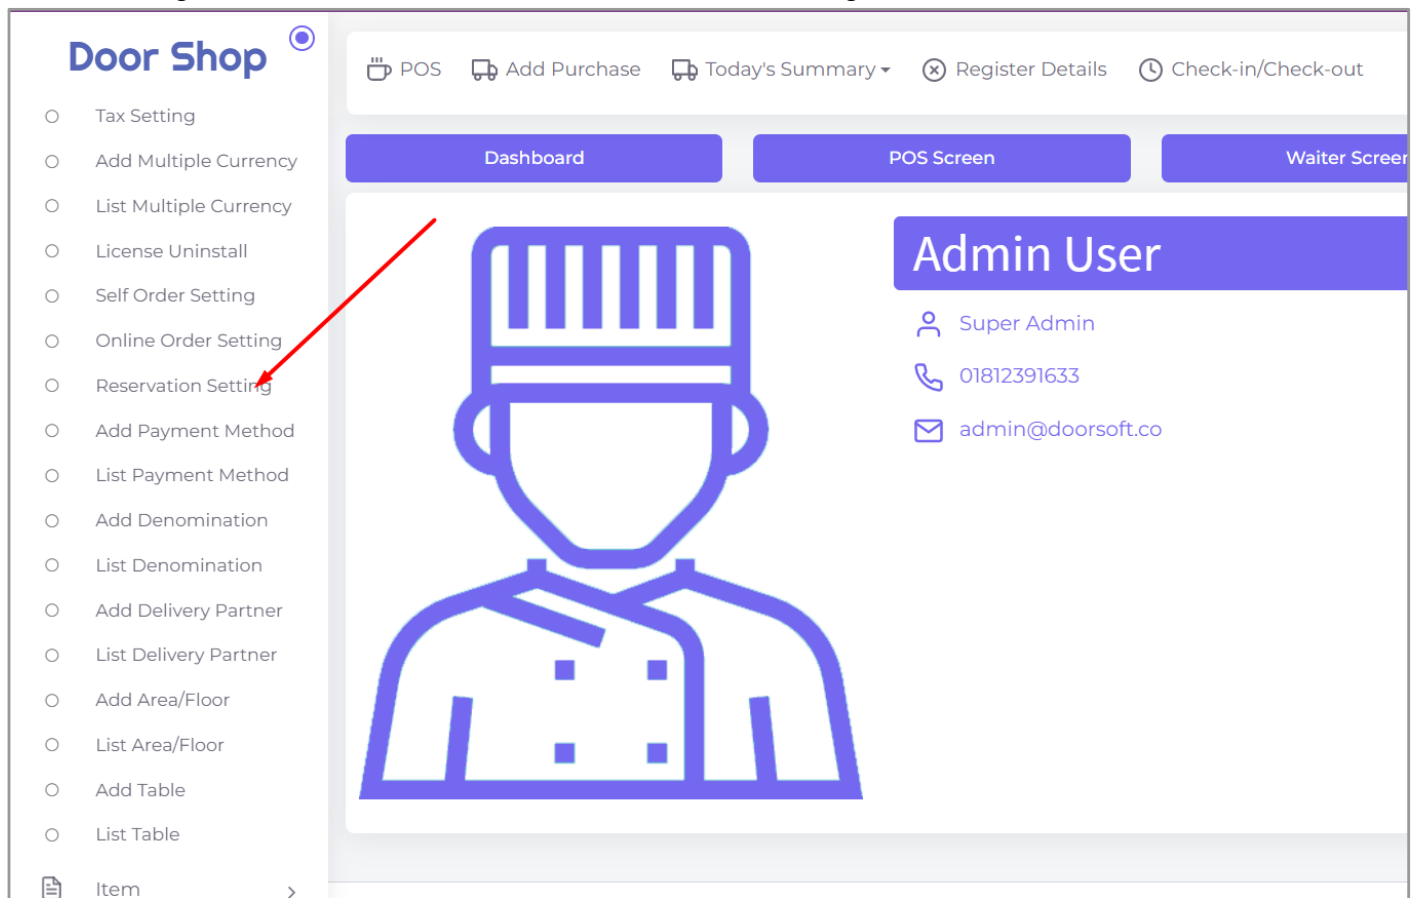

[illegible]

## 33. Reservation

Using this feature you can make arrangements for guests to make in advance to confirm a reservation for their party or any others at a specified time.

Go to "Settings" from the left menu and click "Reservation Setting".

Here enable the "Reservation Status". Set your reservation availability time day-wise. If you want to off any day from the reservation just unselect the day. Copy the reservation page URL and put it in your website as a menu or share with your customer anywhere for reservation.

Dinner Booking

Description

Hi Sir, Please accept the reservation as soon as possible.

Name \*

Mr Joe

Email

joe@gmail.com

Reservation Date \*

2023-02-15

Reservation availability times

Sunday (01:00 am - 12:00 am)

Monday (01:00 am - 11:00 pm)

Tuesday (01:00 pm - 11:00 pm)

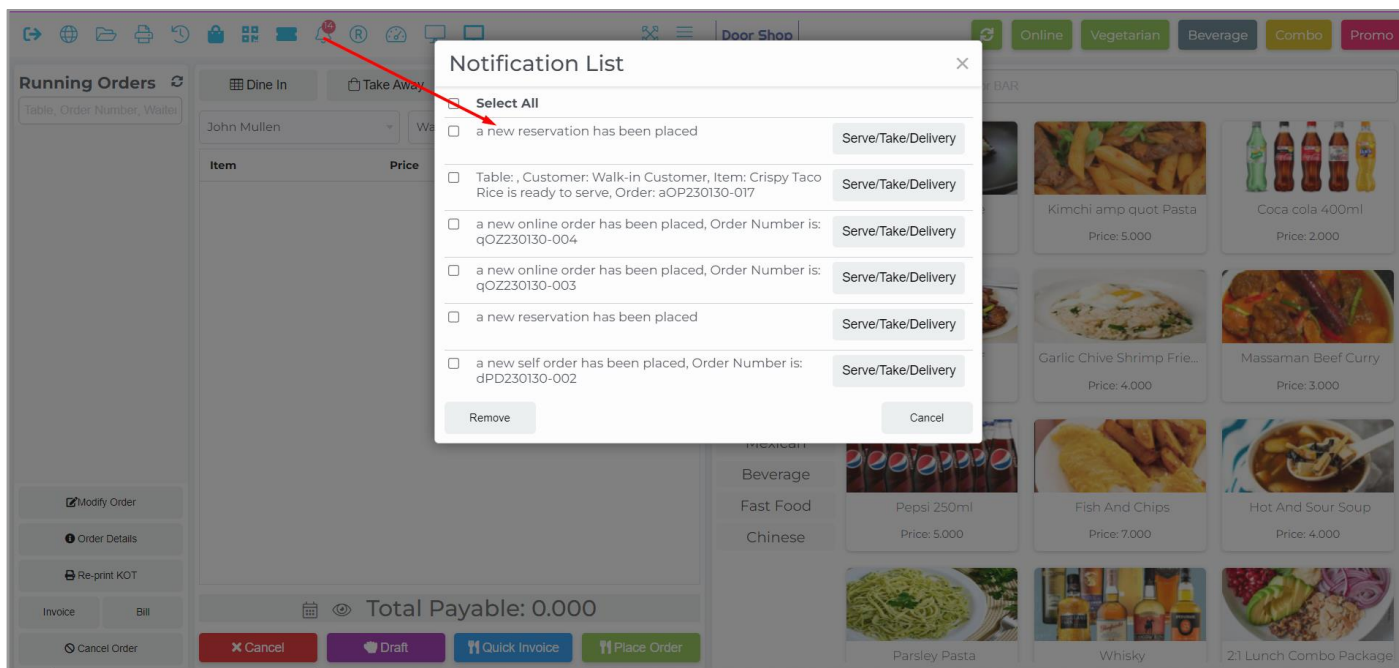

Wednesday (05:00 pm - 10:00 pm)

Thursday (01:00 pm - 12:00 am)

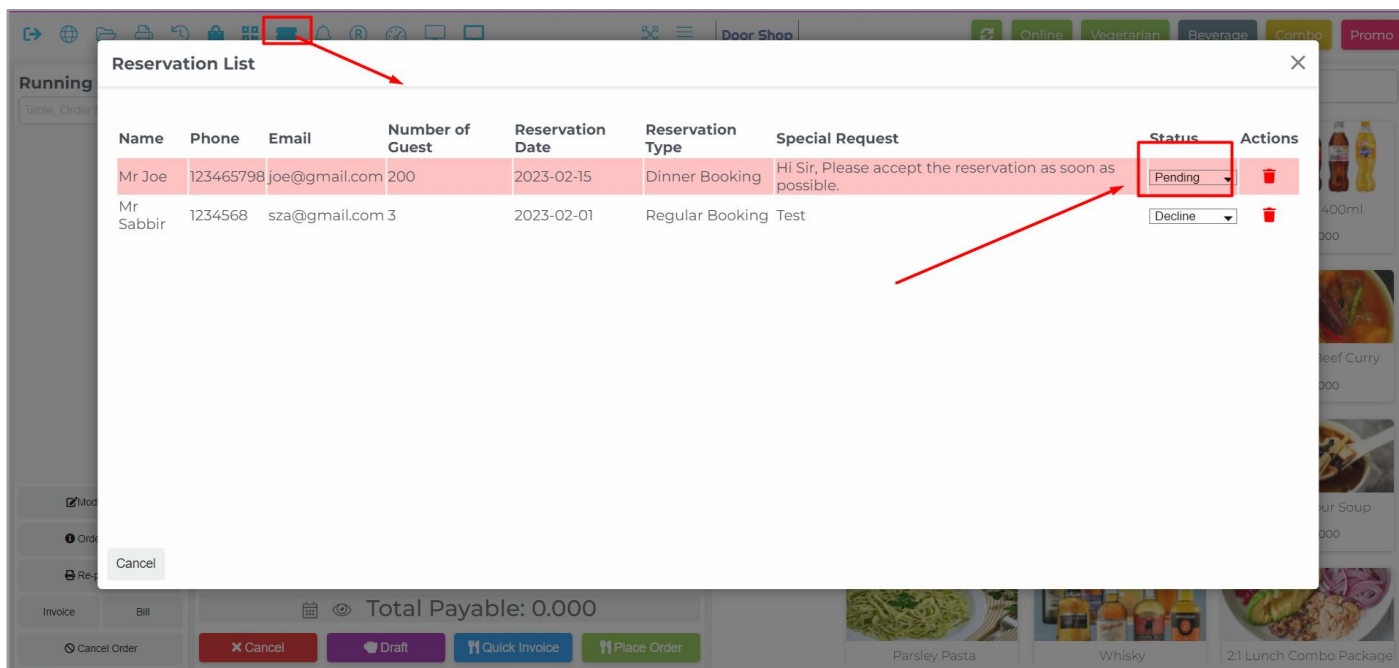

Friday (08:00 am - 09:00 pm)

Saturday (11:00 am - 04:30 pm)

If a customer submits their reservation then the system will provide a notification.

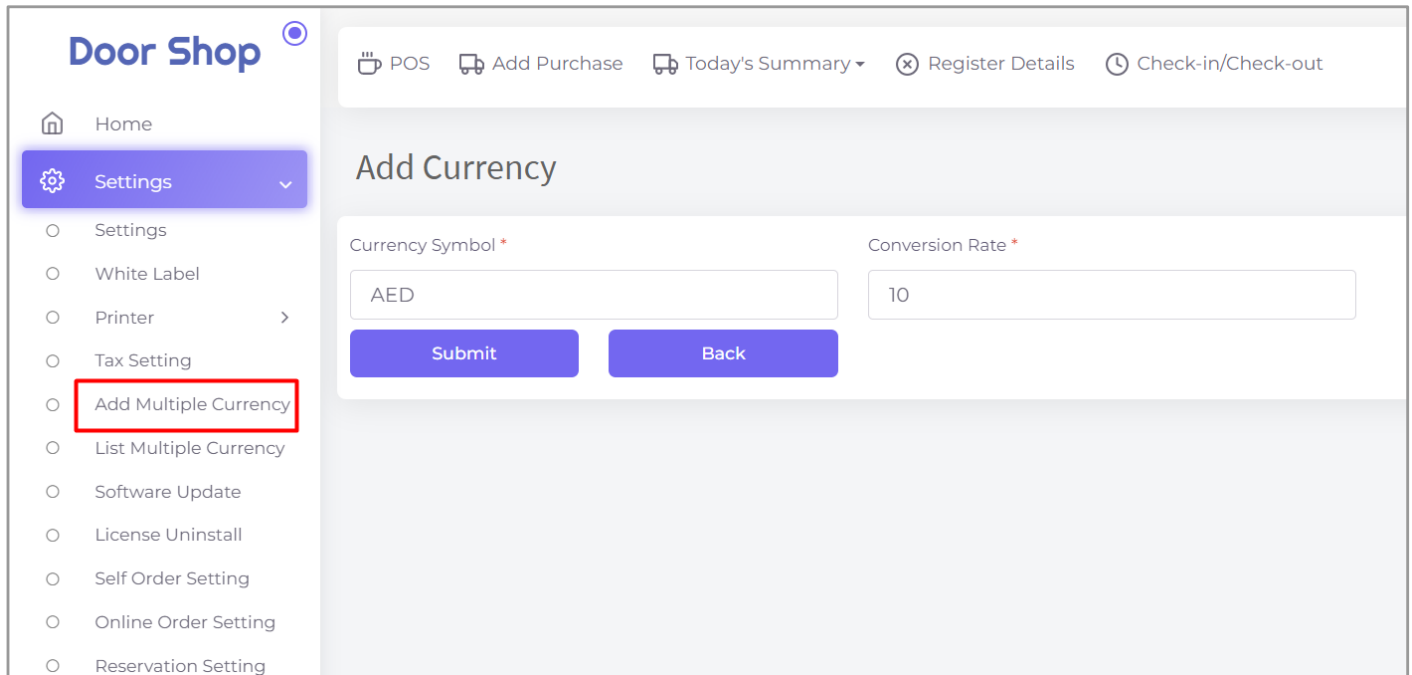

And the cashier will get the reservation details for taking further action. And you will be able to change the reservation status.

## 34. Multiple Currency

Using this feature you can receive payment from customers in multiple currencies.

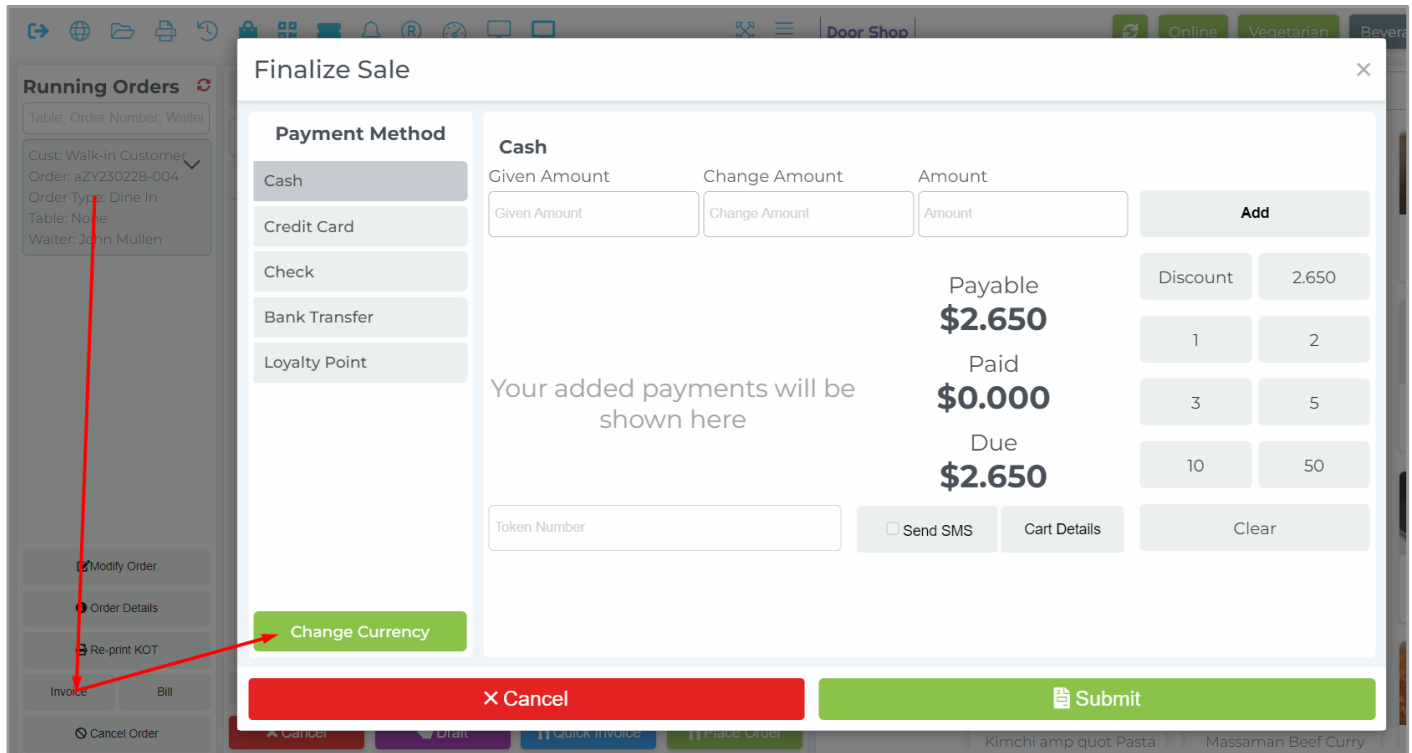

Go to "Settings" from the left menu and then click "Add Multiple Currency" to add a currency.

The screenshot shows the 'Door Shop' interface. On the left, a settings menu is open with 'Add Multiple Currency' highlighted in a red box. The main area is titled 'Add Currency' and contains two input fields: 'Currency Symbol \*' with the value 'AED' and 'Conversion Rate \*' with the value '10'. Below these fields are 'Submit' and 'Back' buttons.

Currency symbol means, in which currency you will get payment from your customer and conversion rate means how much amount it is in your local currency.

Now go to the POS screen and place an order and then check how to add multi currency.

The screenshot shows the 'Finalize Sale' dialog box. On the left, a 'Payment Method' list includes 'Cash', 'Credit Card', 'Check', 'Bank Transfer', and 'Loyalty Point'. A red arrow points from the 'Change Currency' button at the bottom of this list to the 'Running Orders' panel on the far left. The main area of the dialog shows a 'Cash' payment summary with fields for 'Given Amount', 'Change Amount', and 'Amount'. It also displays 'Payable \$2.650', 'Paid \$0.000', and 'Due \$2.650'. A 'Token Number' field and buttons for 'Send SMS', 'Cart Details', and 'Clear' are at the bottom. A red 'Cancel' button and a green 'Submit' button are at the very bottom of the dialog.

Now click on Change Currency- Select your currency from left and then the system will calculate automatically.

### Monthly Sale Comparison(Paid - Last 12 months)

## 36. SMS (Short Message Service)

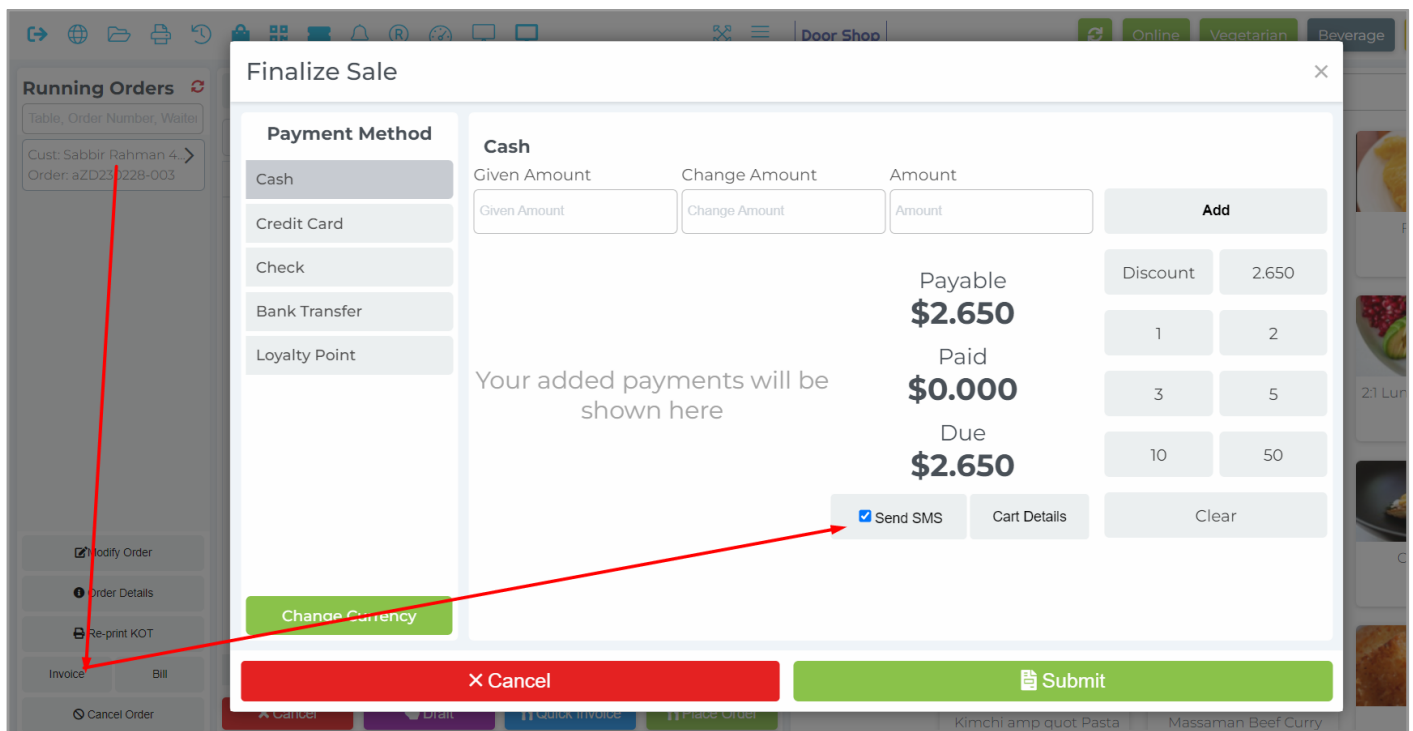

Using this feature you can set up your SMS service and also can send SMS to the customers either with any custom purpose or in sale invoice to their mobile phone.

In the bottom of the menu you will get the Send SMS menu and then click on the menu and set up your SMS configuration.

A screenshot of the 'SMS Settings' configuration form. At the top, it says 'SMS Service Provider \* (Go to this url for signup account http://mobishastra.com/)'. Below this is a dropdown menu with 'Mobishastra' selected. A red box highlights the dropdown menu, which also shows 'None', 'Twilio', and 'Mobishastra' (highlighted with a blue background). Below the dropdown are four input fields: 'Profile ID \*' (containing 'Doorsoft'), 'Password \*' (containing 'Do'), 'Sender ID \*' (containing 'MTS'), and 'Country Code \*' (a dropdown menu with 'Bangladesh (+880)' selected). At the bottom are two buttons: 'Submit' and 'Go To Send SMS'.

Here, you can set up your SMS configuration as per you need with their credentials.

Now go to the POS screen and place an order selecting a customer(except Walk-in Customer). And then you will get an option in the finalize modal to send the SMS of invoice with the selected customer for this order.

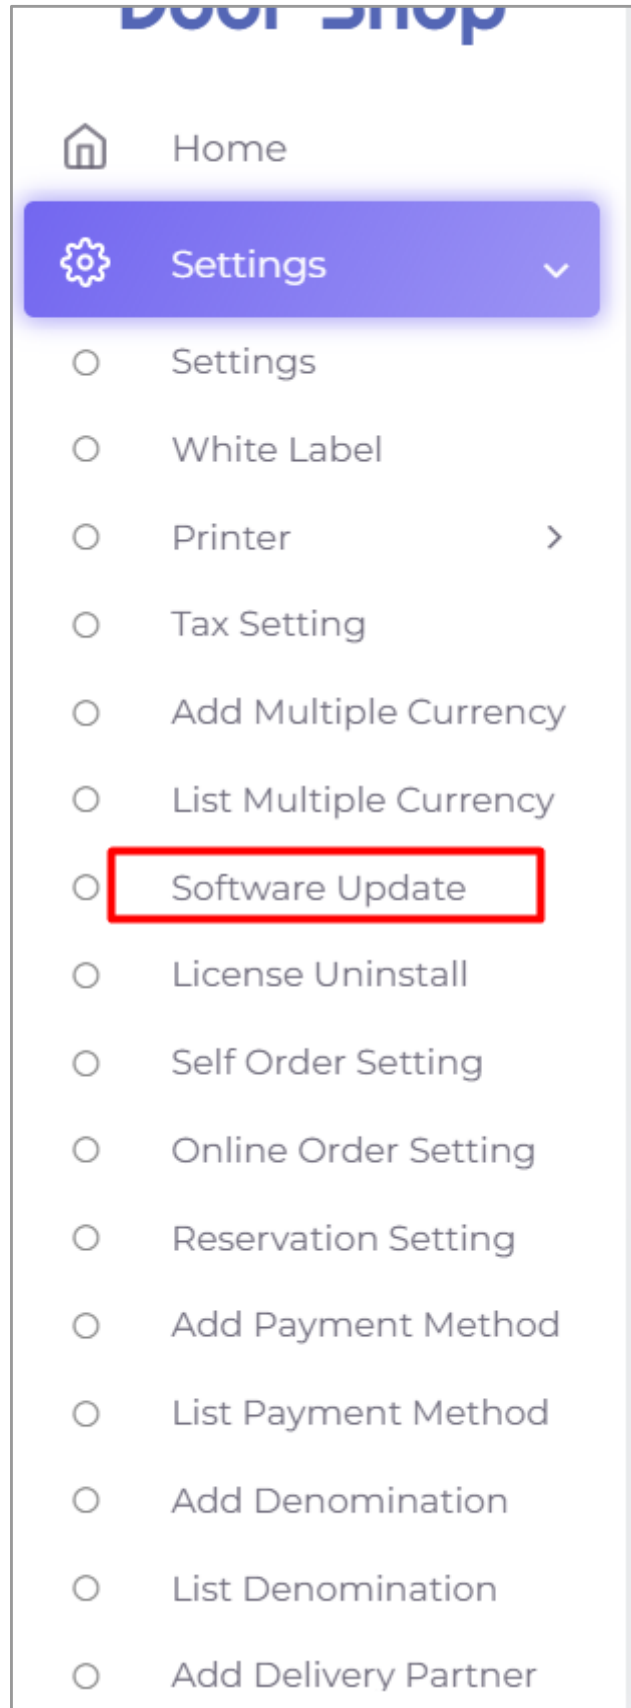

Also there are additional SMS features from the Send SMS menu.

## 37. Software Update

In this feature, you will be able to check for any release of and you can update your software in case the software owner releases any update for this software.

Go to "Settings" from the left menu and then click "Software Update".

# 39. Reset Transactional Data

System reset all of transactional data like: sale, purchase, waste, expense, supplier due payment, customer due receive etc.

Note: before clicking on this button please make sure that you will reset that because you can't rollback the reset data.

Go to “Settings” and scroll down a bit then click on “Reset Transactional Data”.

## 40. License Uninstall

**In case you no more want to run the software where you have installed and want to install it elsewhere:**

Note: Once you uninstall this script, you will not be able to use it here.

Then Uninstall it:

The screenshot shows the 'Door Shop' application interface. On the left, a sidebar menu lists various settings, with 'License Uninstall' highlighted by a red rectangular box. The main content area is titled 'License Uninstall'. It features two input fields: 'Envato Username' with the value 'osmo' and 'Purchase Code' with the value 'fe757-7759-41a3-a 46306 22a0'. Below these fields are two buttons: 'Submit' and 'Back'.

Enter your envato Username and Purchase code then click on Submit. If the system is able to verify it then you will get the next step.

This screenshot shows the 'Door Shop' application after a successful license uninstall. A green message box at the top of the main content area displays '✓ License uninstall has been successful!'. The left sidebar menu now lists 'License Uninstall' as the selected option. The main content area still shows the 'License Uninstall' form with the same input fields and buttons as in the previous screenshot.

Install again following the usual procedure in documentation.

**In case you want to move the copy from where you have installed to another place:**

Note: Once you uninstall this script here then you will not be able to use it here.

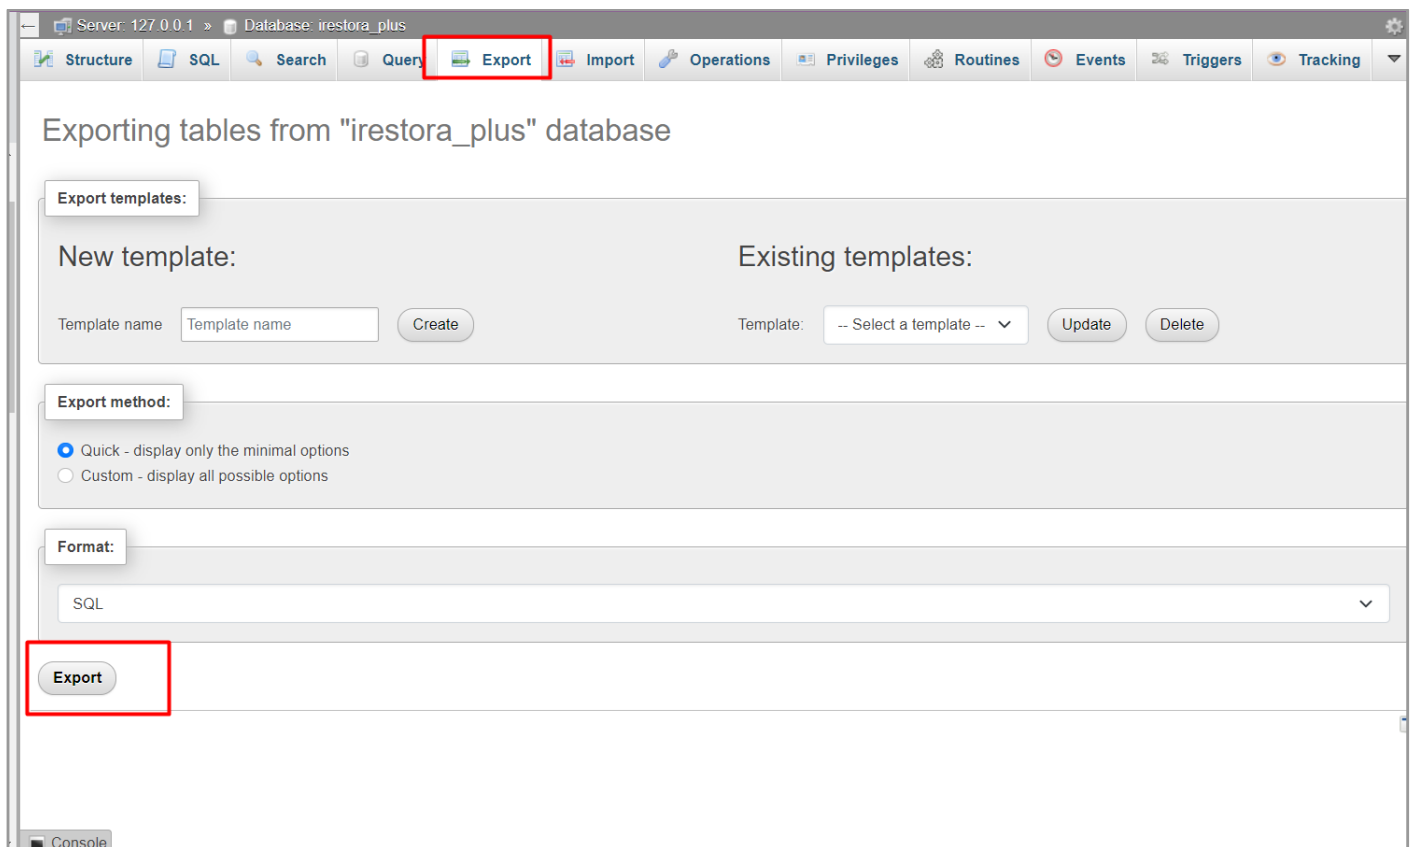

Then Uninstall it-

The screenshot shows the 'Door Shop' application interface. On the left, a settings menu lists various options, with 'License Uninstall' highlighted by a red rectangular box. The main content area is titled 'License Uninstall'. It features two input fields: 'Envato Username' with the value 'osesmo' and 'Purchase Code' with the value 'fe757-7759-41a3-a 46306 22a0'. Below these fields are two buttons: 'Submit' and 'Back'.

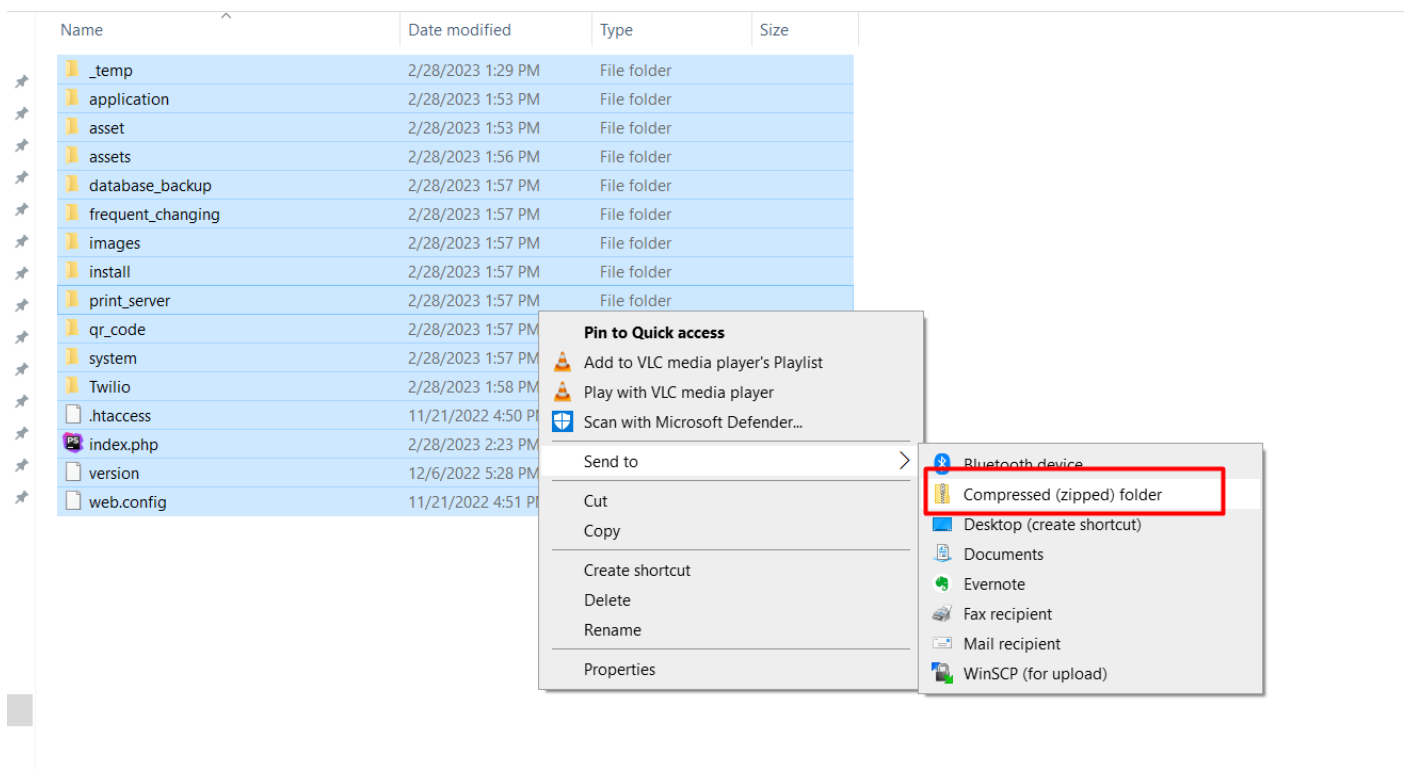

Enter your envato Username and Purchase code then click on Submit. If the system is able to verify it then you will get the next step.

This screenshot shows the same 'License Uninstall' page after a successful operation. A green message box at the top of the main content area displays the text 'License uninstall has been successful!'. The 'License Uninstall' option in the left-hand settings menu is now highlighted with a red rectangular box. The form fields for 'Envato Username' and 'Purchase Code', along with the 'Submit' and 'Back' buttons, remain unchanged.

Now go to your database and select. After that click on the Export button from your phpMyAdmin and Export it.

## ZIP Source code.

After generating the zip file then upload and extract it in your server.

Import Database in your new server from phpMyAdmin.

The screenshot shows the phpMyAdmin interface with the 'Import' tab selected. The title bar indicates 'Server: 127.0.0.1' and 'Database: irestora\_plus'. The top navigation bar includes tabs for Structure, SQL, Search, Query, Export, Import, Operations, Privileges, Routines, Events, and Triggers. The main heading is 'Importing into the database "irestora\_plus"'. Below this, the 'File to import:' section contains instructions on file formats (gzip, bzip2, zip, or uncompressed) and a note that compressed file names must end in .[format].[compression], with an example of .sql.zip. A 'Browse your computer: (Max: 40MiB)' section features a 'Choose File' button and a 'No file chosen' status. A red arrow points from the 'Import' tab to the 'Choose File' button. Below this, a message states 'You may also drag and drop a file on any page.' The 'Character set of the file:' section has a dropdown menu set to 'utf-8'. The 'Partial import:' section includes a checked checkbox for 'Allow the interruption of an import in case the script detects it is close to the PHP timeout limit.' with a sub-note: 'This might be a good way to import large files, however it can break transactions.' Below this is a text input field for 'Skip this number of queries (for SQL) starting from the first one:' with the value '0'. At the bottom, the 'Other options' tab is visible.

Upload and extract source code.

Install again following the usual procedure in documentation.

## 41. Credits

Lot of thanks for those open source contributors whose contributions make a lot easier to develop our software.

**CodeIgniter:** PHP-Framework under MIT License

**AdminLTE:** Best open source admin dashboard & control panel theme. Built on top of Bootstrap 4

**Bootstrap:** Most popular HTML, CSS, and JS framework under MIT License

**jQuery:** A fast, small, and feature-rich JavaScript library under MIT License

**Font Awesome:** The iconic font and CSS toolkit under GPL License.

**IONicons:** An open-sourced and MIT licensed icon pack.

**Select2:** jQuery based replacement for select boxes

**PHPExcel:** A simple PHP to Excel conversion - GNU Library General Public License (LGPLv2.1)

**DataTables:** A plug-in for the jQuery - GPL v2 license or a BSD (3-point) License

**Sweet Alert:** A beautiful, responsive, customizable and accessible (WAI-ARIA) replacement for JavaScript's popup boxes

**jQuery Cookie:** A simple, lightweight jQuery plugin for reading, writing and deleting cookies

**SlimScroll:** A small jQuery plugin that transforms any div into a scrollable area with a nice scrollbar

**MarqueeJS:** An alternative to marquee tag

**Bootstrap-datetimepicker:** Date and Time picker widget based on bootstrap - Apache License V2

**iCheck:** Highly customizable checkboxes and radio buttons under MIT License- MIT License

**ChartJS:** Simple, clean and engaging HTML5 based JavaScript charts
