

Part 1

 themexpert.com/docs/wordpress-themes/edumodo/part1

Key Features

- 8 Homepage style
- Drag & Drop page builder – Elementor
- RTL Support
- LearnPress LMS integration
- Sensei LMS integration
- LearnDash LMS integration
- Built-in course and lesson type
- Multiple course style : Grid / List
- Multiple teacher style
- Course details page style with pagebuilder
- Teacher page details style with page builder
- Notice page
- Contact form 7 integration
- weForm integration for course booking
- WooCommerce support
- Apple TV effect
- Event calendar integrations

- Event listing and details page style
- Testimonial widgets for pagebuilder
- Redux2 Framework
- CMB2 metabox integration
- Bootstrap framework
- Full responsive
- Megamenu
- Array of built-in page
- Dynamic navigation
- Quick Social sharing
- Animation slider
- Instagram integration
- 1 click installation and dummy data import
- Mailchimp integration
- Huge shortcode collection
- Customization
- Flexible blog layout option
- Fast and Excellent support

Requirements

In order to run Edumodo smoothly on your server, you need to fulfill this requirement listed below:

- Wordpress: 3.9+
- PHP 5.6+ (Recommended PHP 7.1)
- Elementor Page Builder

Download

Head over to Edumodo **download** page on **www.themeforest.net** then download the **EdumodoPackage.zip** file. In this **.zip** file, you have everything you need.

Installation

Installing WordPress

To install this theme, you must have a working version of WordPress already installed on your server. If you need help installing WordPress, go through the link and follow the instructions: [Installing WordPress](#)

Installing Theme

There are a couple of simple steps to install Edumodo theme on your server. It's quite straightforward.

If you are starting from the scratch, we recommend you to follow the installation guide below to install with the pre-built existing demo data. This is the simplest way to get started.

On the other hand, if you already have an existing WordPress site and want to apply Edumodo theme, in that case, you just need to install the following package:

edumodo.zip

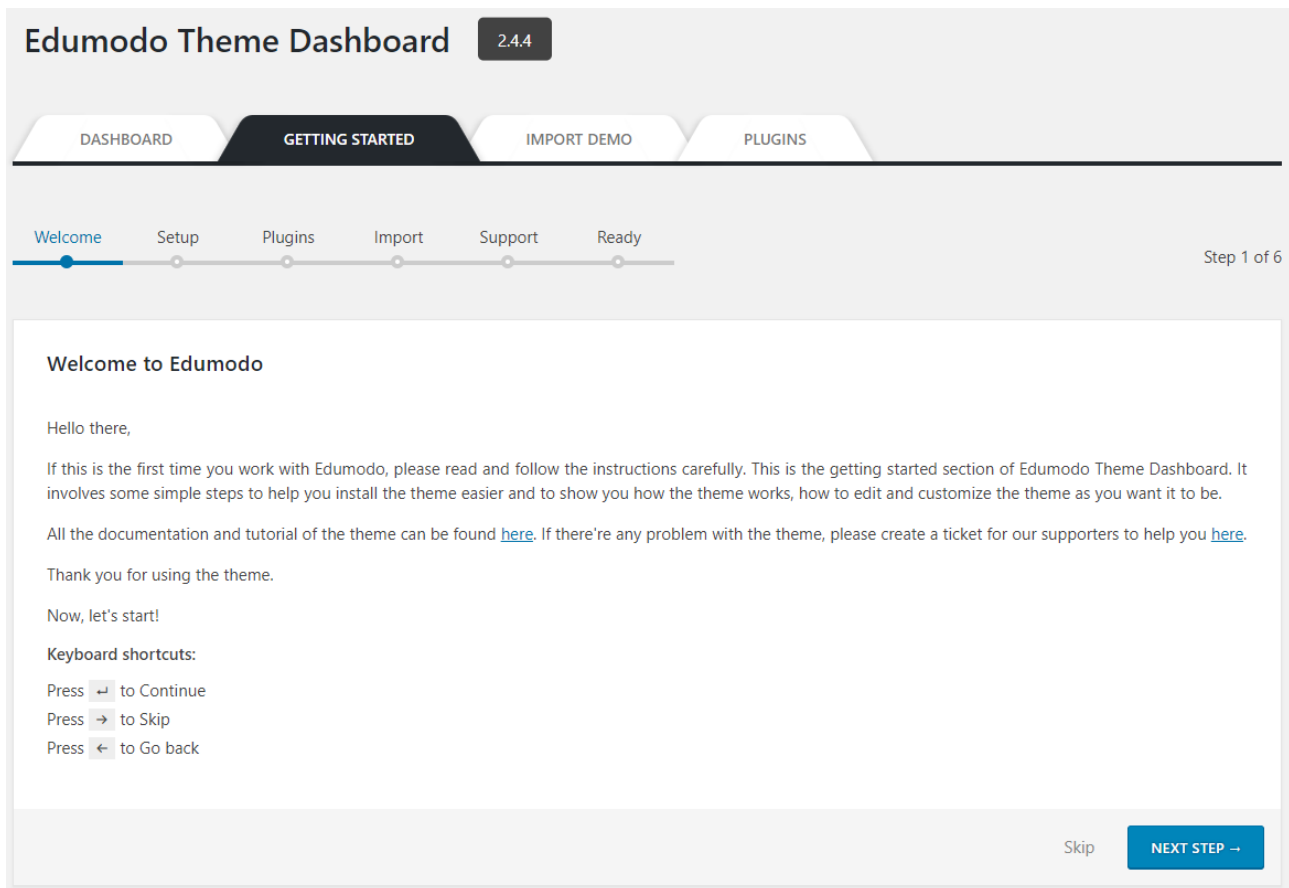

You can find this package inside the downloaded .zip file of Edumodo theme. So, before getting started with the installation process, *Extract* the .zip file and you'll find the desire edumodo.zip in the **Theme** folder after the extraction.

- Log in to the WordPress Administration Panels.
- Now, go to **Appearance> Themes> Add New> Upload Theme** then click on the **Choose File** button then select the edumodo.zip file and hit upload.
- After installation being done, roll over to **Appearance> Themes** .
- Find just uploaded theme on the Theme Thumbnail area.
- Click the Activate button below to the theme's thumbnail, to set it as default.

Do not forget to **Activate** the theme as default after installation process successfully been done.

To know more, visit [WordPress Codex](#)

Step by Step Getting Started Wizard

As soon as you activate the theme, step by step Getting Started wizard will appear. By following the instructions you will be able to easily install required plugins and demos that you want. In third step of the wizard it will help you to install and activate plugins.

Install & Activate Required Plugins

There are ten plugins, required for Edumodo theme to work properly. Those are listed below:

1. Edumodo Core: Theme core functionality (CPTs and shortcodes).
2. Elementor Page Builder: Drag and Drop page builder.
3. Redux Framework: Used to build its backend admin panel.
4. CMB2: For building meta boxes.
5. WPForms : For creating contact form. (Additionally we have also provided support for contact form 7 and weforms.)
6. Revolution Slider: Create and use elegant sliders on your site.
7. WooCommerce : For selling goods online (optional)
8. The Events Calendar : For creating Events (optional)
9. Widgetkit for Elementor: For creating stylish sections.
10. LearnPress : Comprehensive LMS Plugin for WordPress (optional)

DASHBOARDGETTING STARTEDIMPORT DEMOPLUGINS

WelcomeSetupPluginsImportSupportReady

Step 3 of 6

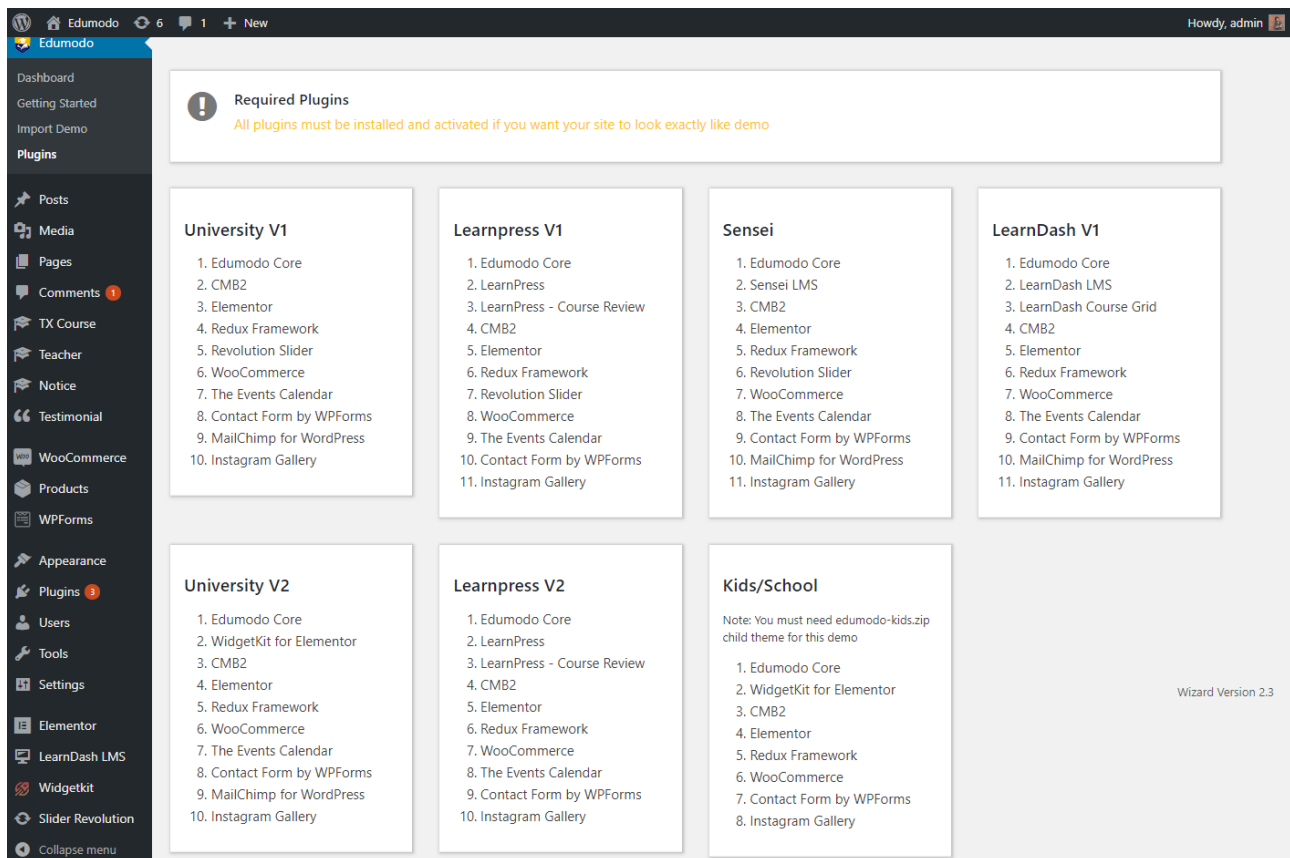

Install Required Plugins

Below is the list of all the required and recommended plugins for the theme to run perfectly. Please choose all and click the button install and activate below.

<input checked="" type="checkbox"/> Plugin	Require	Status
<input checked="" type="checkbox"/> Edumodo Core	Required	Not Installed
<input checked="" type="checkbox"/> Elementor Page Builder	Required	Not Installed
<input checked="" type="checkbox"/> Redux FrameWork	Required	Not Installed
<input checked="" type="checkbox"/> CMB2	Required	Not Installed
<input checked="" type="checkbox"/> WPForms	Required	Not Installed
<input checked="" type="checkbox"/> Revolution Slider	Recommend	Not Installed
<input checked="" type="checkbox"/> WooCommerce	Recommend	Not Installed
<input checked="" type="checkbox"/> The Events Calender	Recommend	Not Installed
<input checked="" type="checkbox"/> WidgetKit for Elementor	Recommend	Not Installed
<input checked="" type="checkbox"/> LearnPress - WordPress LMS	Recommend	Not Installed

SkipINSTALL AND ACTIVATE

- Just click on **INSTALL AND ACTIVATE** button.
- Now wait until the plugin installation process is completed.
- If you do not want to install plugins or want to manually install later, click on the **Skip** button.

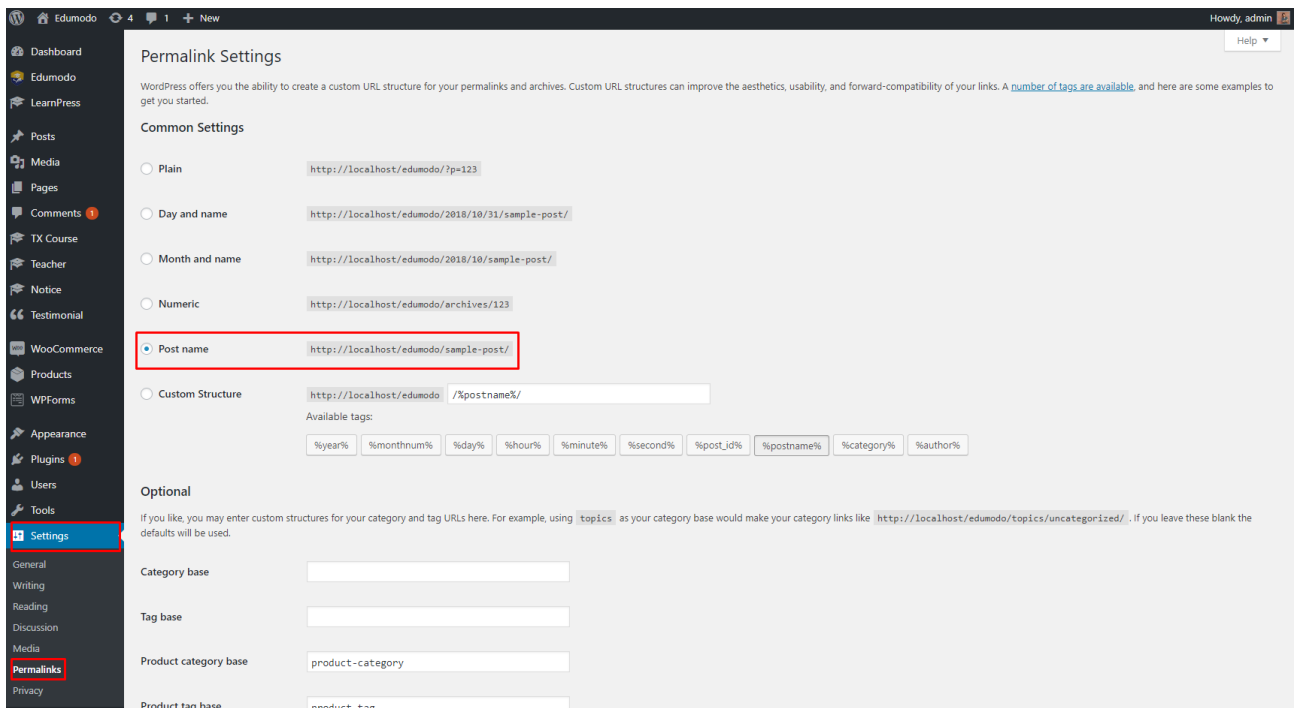

To manually install plugins, do it from WordPress plugins directory and do it in default order. We have provided some plugins in the **Edumodo package folder**. You can also install those plugins to your website by using **Upload & install** function of WordPress from plugins options.

You might need some more plugins installed and activated, according to the demo you want to import.

Permalink Flash

Before importing data it is very much important to **flash permalink**. Or else your site with imported dummy data may not look exactly like demo. (At first time it is not necessary to flash permalink)

You must flash permalink before using any LMS or in time of switching from one LMS to another.

To flash permalink

- Go to **Settings > Permalinks**
- From Common settings choose **Post name** and click save changes.

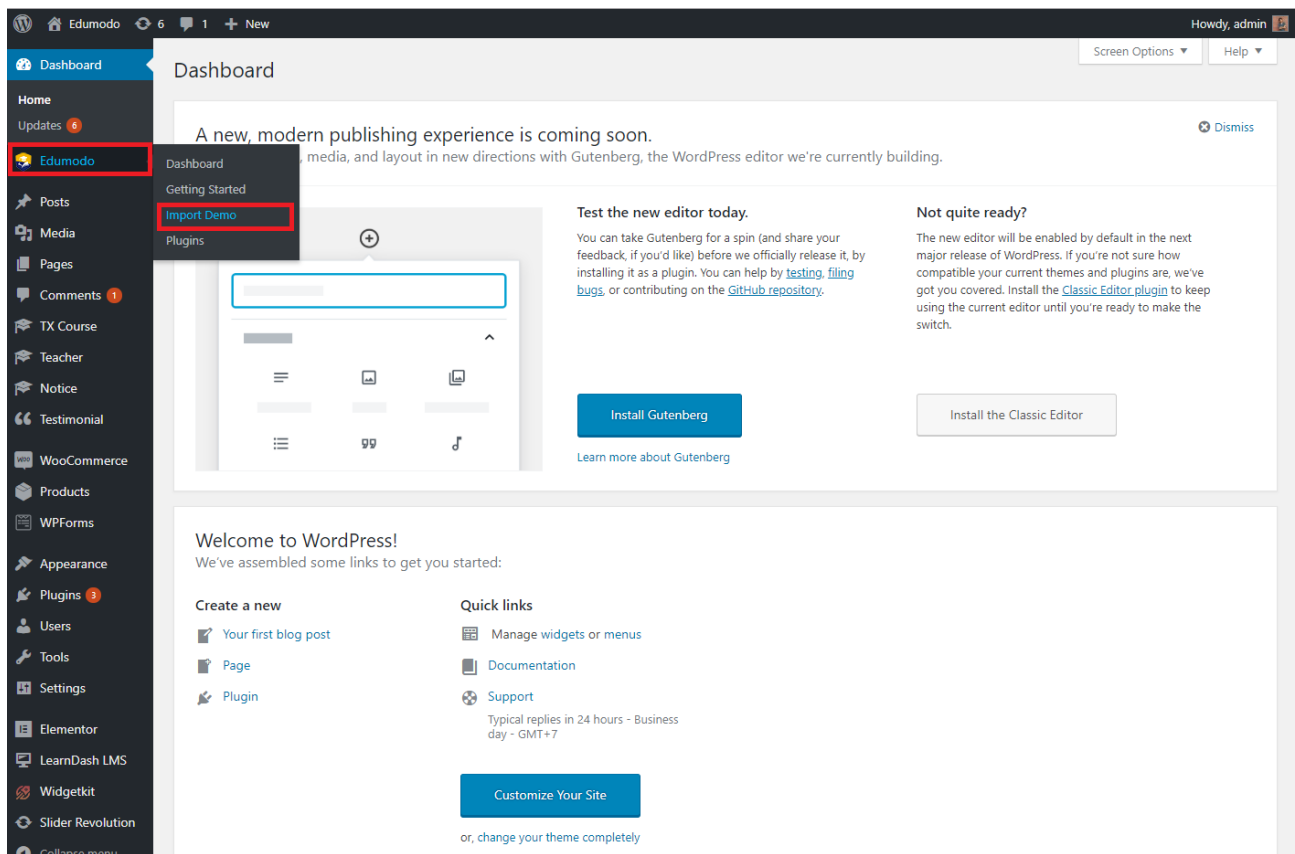

Now you can import demo data perfectly.

Import Demo Data

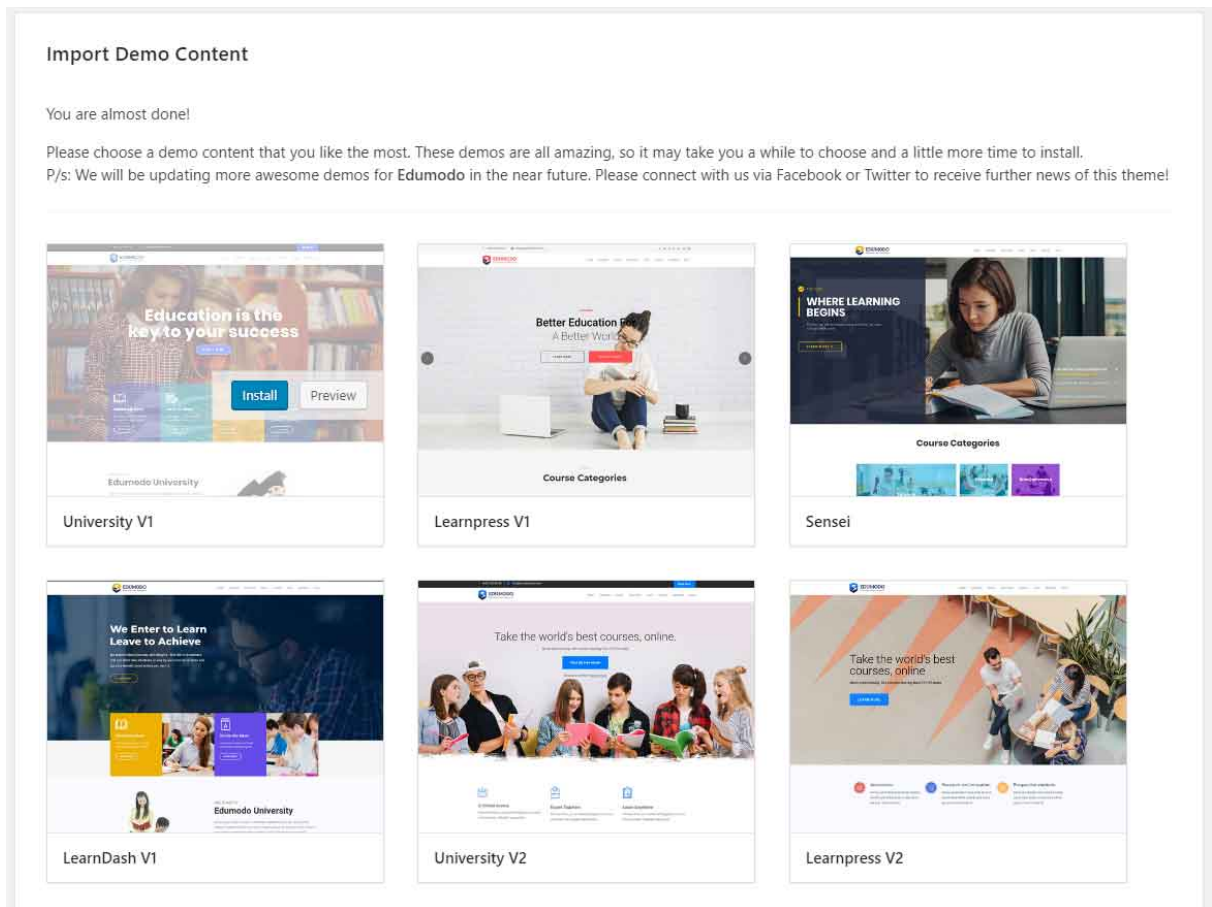

You can import demo data at the moment **Getting Started wizard** starts. Or try the following procedure.

You must have installed all the required plugins, before you import any demo data. For importing demo of any LMS, (deactivate any other LMS first) download & install your preferred LMS and then try to import demo data. For importing demo data of kids layout, first install kids child theme, activate it then import it.

- Log in to the WordPress Administration Panels.
- Go to **Edumodo> Import Demo**

- Chose the layout and click on **Install** button.
- Click on **Import** .

It will take some time to load all demo data on your server. Wait till it shows you a successful data importing message.

Kids layout Demo data import

To import the demo data of kids layout, at first you **must install the child theme** that is provided with the theme package. After the installation is complete, activate it and now you can import demo data of kids layout. Now import the demo data in regular way.

Child Theme

In the edumodo package there is two child theme available in it. Kids-child.zip is for using the kids layout and edumodo-child.zip is for inheriting the functionality and styles of the main theme.

Updating theme

Remaining in the backdated versions may slow down performance of the theme and you might miss the latest features. You can update edumodo in two ways, manually or automatically.

Automatic update

We recommend you to update theme automatically because it the best practice and you won't have to face any hassle.

- Go to this link <http://envato.github.io/wp-envato-market/dist/envato-market.zip> and download **Envato Market plugin**.
- Now install and activate it.
- Click on Envato Market and generate personal token.

The screenshot shows the WordPress dashboard with the Envato Market plugin settings page open. The left sidebar contains a menu with items like Sensei, Courses, Lessons, Questions, WooCommerce, Products, WPForms, Appearance, Plugins, Users, Tools, Settings, Elementor, Widgetkit, Slider Revolution, and Envato Market (which is highlighted). The main content area has a 'Welcome!' message and instructions on how to use the plugin. Below this, there are two tabs: 'Settings' and 'Help'. The 'Settings' tab is active, showing the 'Activate Envato API Connection' section. This section contains a list of four steps: 1. Generate an Envato API Personal Token by clicking this link. 2. Copy the token into the box below. 3. Click the "Save Changes" button. 4. A list of purchased Themes & Plugins from Envato Market will appear. There is a text input field for the token and a 'Save Changes' button. To the right, there is a 'Single Item Tokens (Advanced)' section with a warning and an 'Add Item' button. Red arrows and numbers 1 through 4 point to the following elements: 1. The 'Activate Envato API Connection' section header. 2. The link 'clicking this link' in step 1. 3. The token input field. 4. The 'Save Changes' button.

- Sign in with your login details and agree the terms and conditions.
- Click on **Create Token**
- Now copy and paste it on the token field of your sites token field.
- After you click on save changes, you will get notification for updates and you will be able to update your theme automatically.
- You can view the video details of this process from below.

Manually update

To manually update we recommed you to use a file manager.

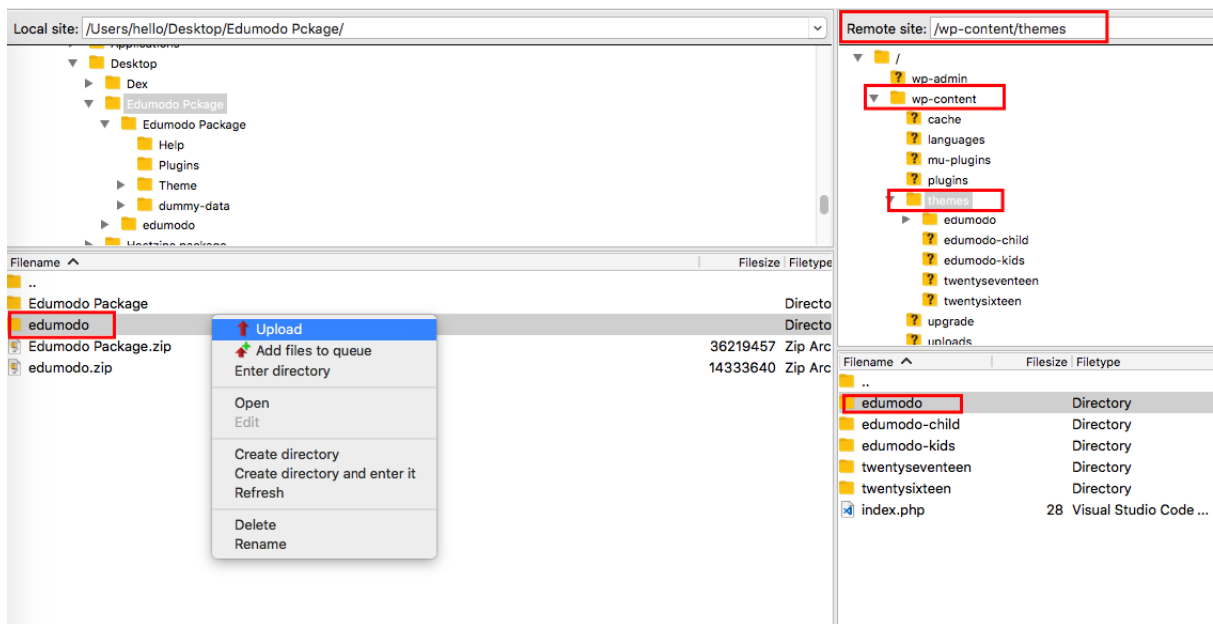

- First go to the cPanel of your site or use an FTP program like Filezilla to explore the root directory of your site.
- Now go to `public_html/wp-content/themes` or in your themes folder.

- Find the theme name **edumodo** or whatever name is and delete it.
- Now from latest **Edumodo Package** folder (which you have downloaded from envato) go

to **Theme** .

- Extract **edumodo.zip** and upload the theme in that folder. (If your theme name was **academia**, you must rename extracted theme name to **academia** too.)

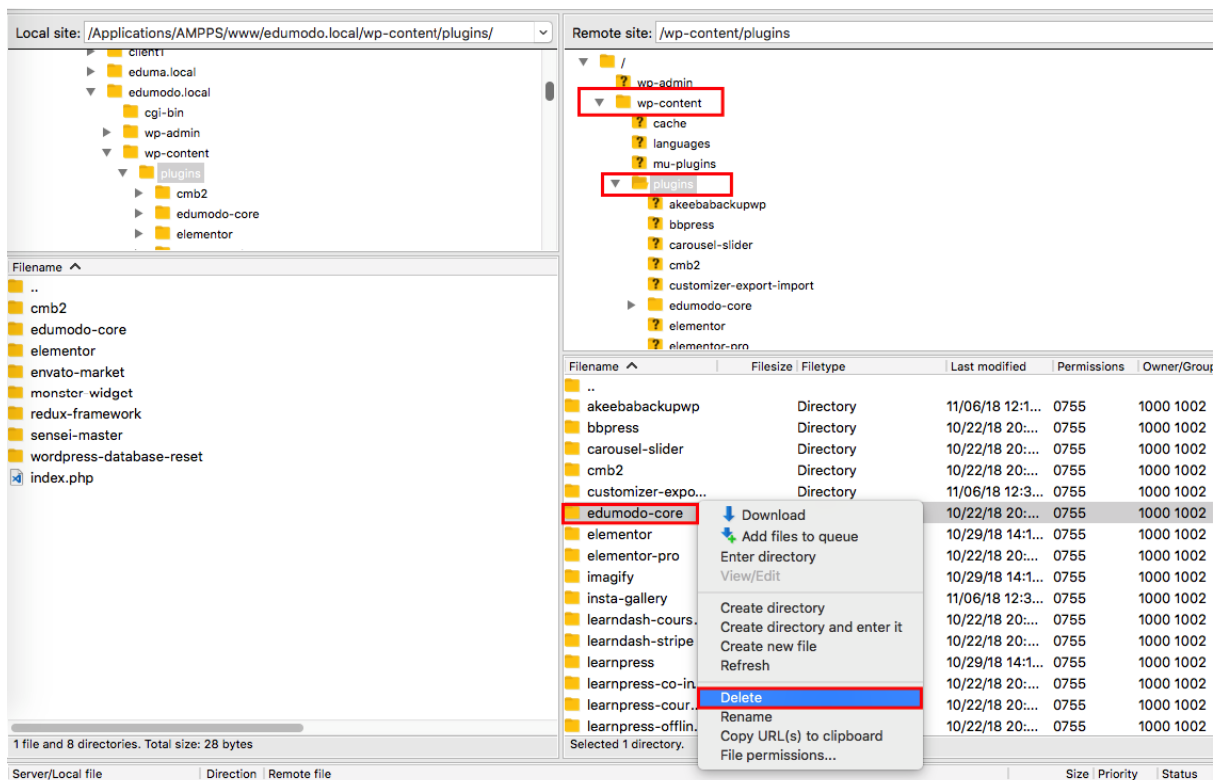

If you manually update your theme, you must update **edumodo core** plugin.

- Now reload your site. Your theme is now updated.

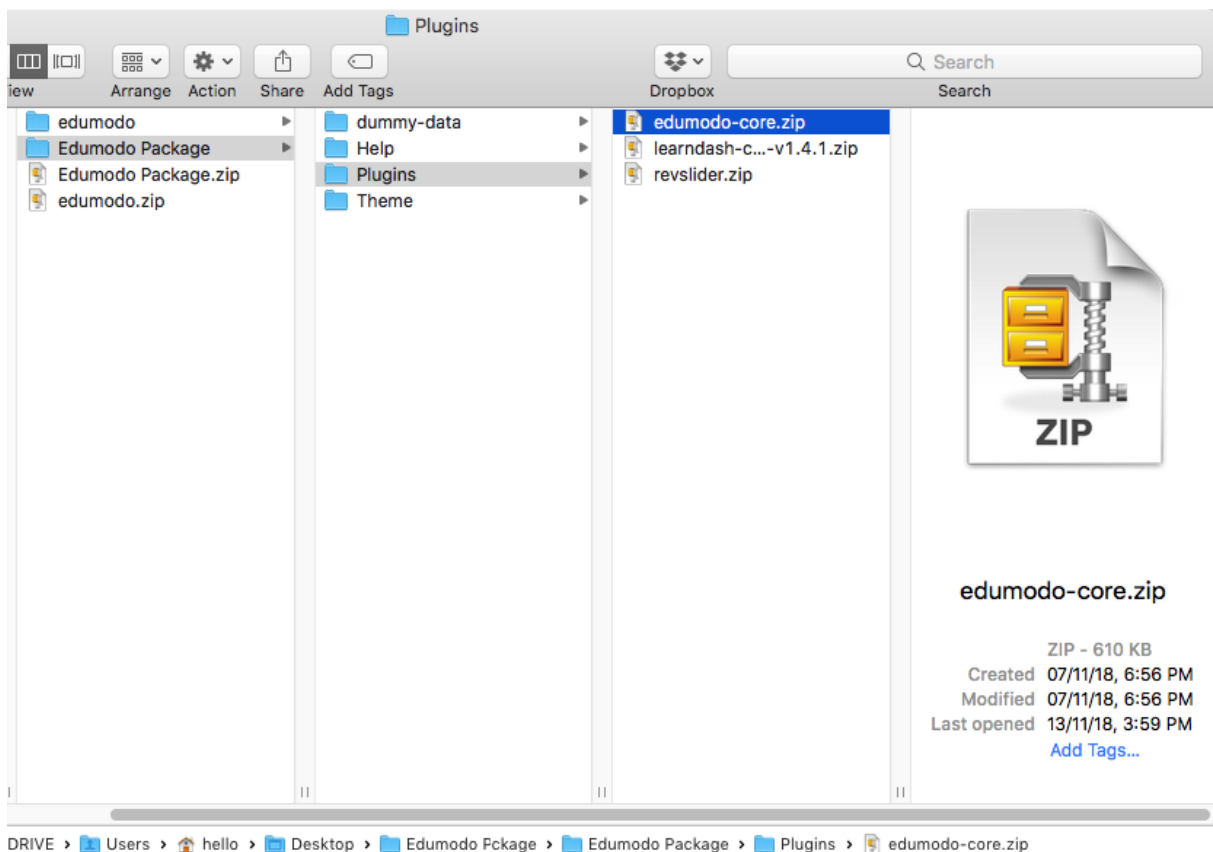

If your site is set to automatic update there is no need to update theme manually.

Updating Edumodo Core Plugin

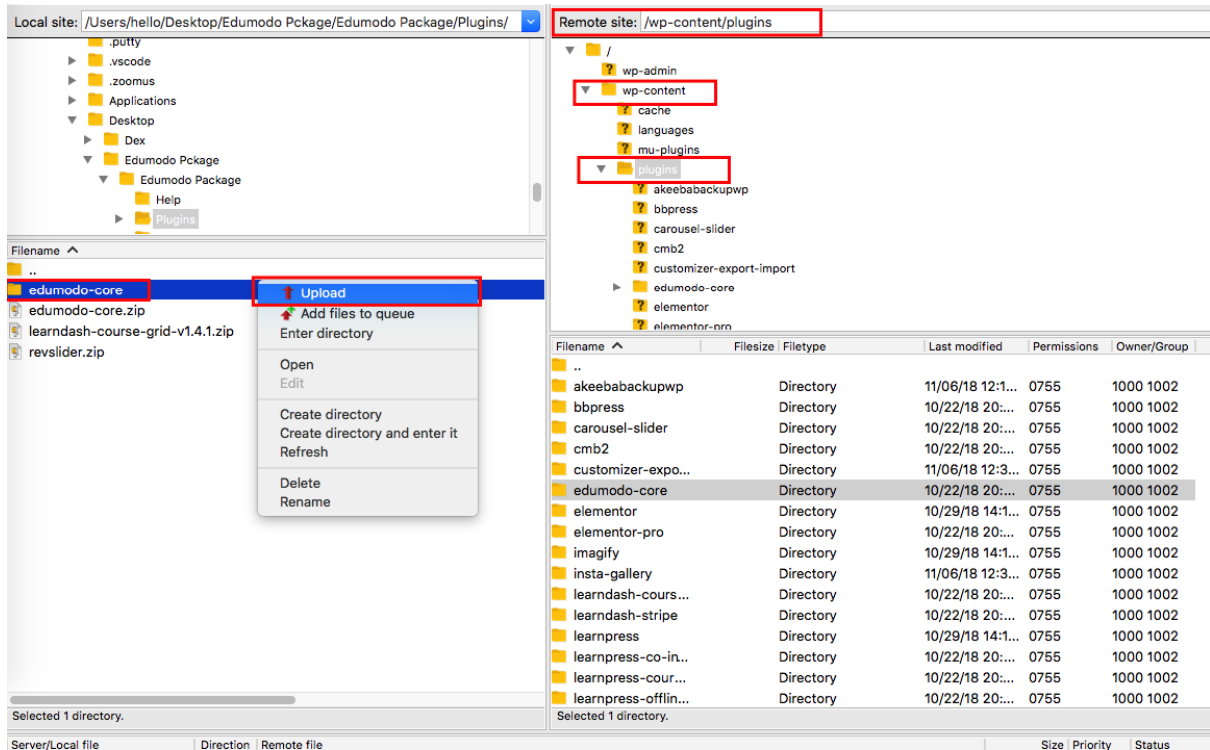

- First go to the cPanel of your site or use an FTP program like Filezilla to explore the root directory of your site.
- Now go to public_html/wp-content/plugins or in your themes **plugins** folder.

- Delete **edumodo-core** folder.
- Now from latest **Edumodo Package** folder (which you have downloaded from envato) go to **Plugins**.
- Extract **edumodo.zip** and go to plugins folder.

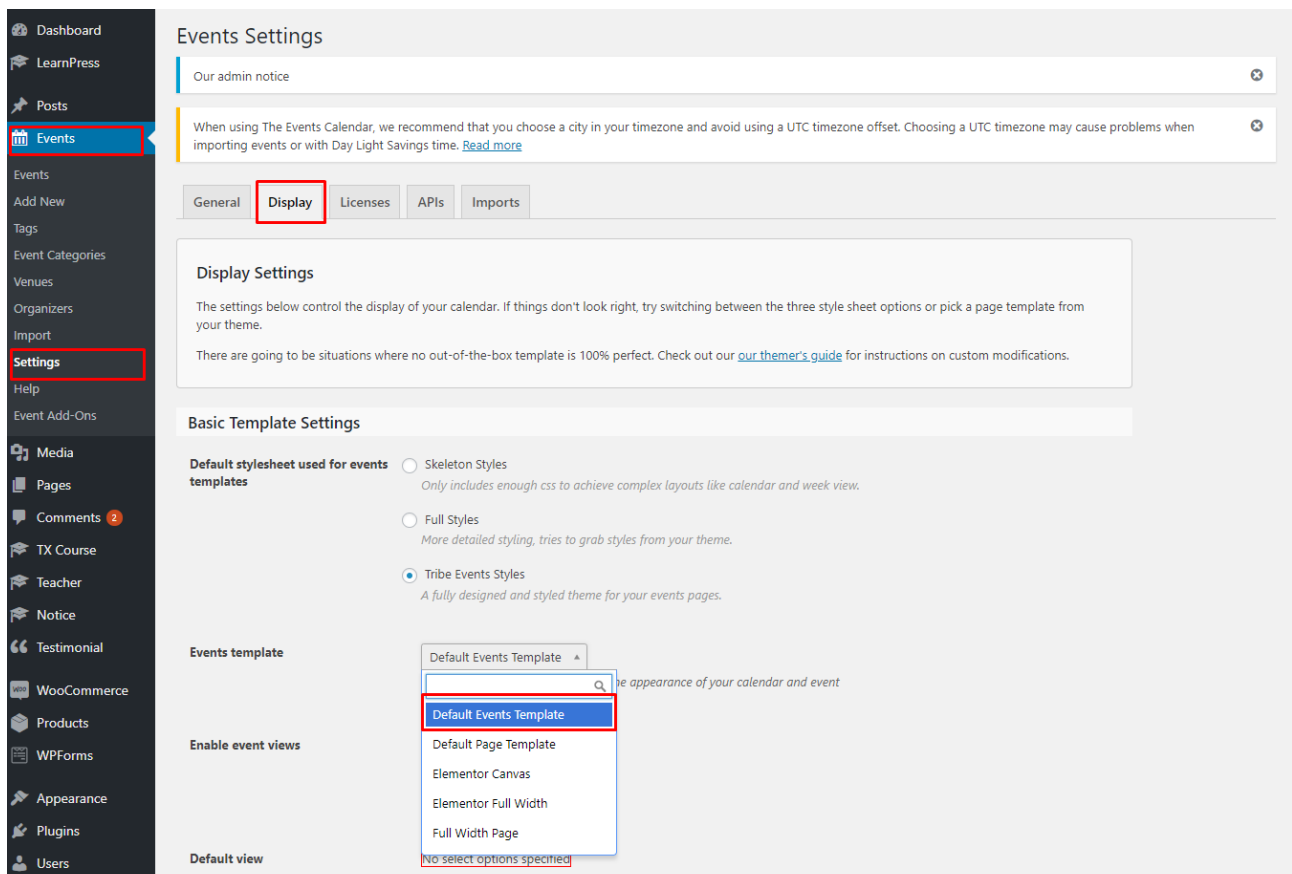

- Extract **edumodo-core.zip** and upload the this folder to public_html/wp-content/plugins or in your themes **plugins** folder.

- Now reload your site. Your core plugin is now updated.

Events Settings

To get the default style of template demos of event calendar, you have to configure it. After importing the demo,

- Go to `Events > Settings
- Now select display tab.
- Under **Events template** , select **Default Events Template** and click save changes.

Now you will get all the default styling for events calendar.

| You must install main theme, before installing child theme.

Theme Settings

You can differently customize theme according to your need using Easy Customization feature.

Click on **Appearance** at left-bottom corner of the module screen to open up *Edumodo Options* panel.
