## GENERAL

### Wemusic Instruction

Firstly we would love to send our great thanks to you for purchasing Wemusic. This documentation covers almost everything to guide you step by step from the start to have your site on air. We encourage you to read thoroughly all section before you go on. If you still have to cope with any problem around, get our quick support at [NooTheme Support Center](#).

Thanks again and enjoy building your website with Wemusic.

### WordPress Information

Before installing this theme, please make sure you have a working WordPress version already installation. For further guide to install WordPress, please find in below useful links:

- [WordPress Codex](#): General info about WordPress and how to install your server.
- [Instructional Video](#): How-To video created by Woo Themes
- [First Steps With WordPress](#): Multiple topics about WordPress.
- [FAQ New To WordPress](#): Popular FAQs about WordPress.

### Download Theme Package

When purchasing successfully our theme from Themeforest, you will need to download theme package for your use. To download the package, please login to your Themeforest account, navigate to “**Downloads**”, click the “**Download**” button in the left of the theme, choose “**All files & documentation**” to download our theme package to your computer. The theme package includes:

- **Wemusic Theme File**: Includes **noo-wemusic.zip** file that consists of everything you need to install the theme.
- **Document Folder**: Includes **Wemusic Documentation file** that helps you get to know about Wemusic and guides you to build your site with our theme.
- **Licensing Folder**: Includes the licensing files of Themeforest purchase.

- **Demo Content Folder:** Includes the .xml file you will need to import our demo data.

## Requirement For Wemusic

To use Wemusic theme, you must be running **WordPress 3.5 or higher, PHP5 or higher, and MySQL5 or higher**. Follow below checklist to ensure your host can work well with Wemusic theme:

- Your web host has the minimum requirements to run WordPress.
- They are running the latest version of WordPress.
- You can download the latest release of WordPress from official WordPress website.
- You did create best secure passwords FTP and Database.

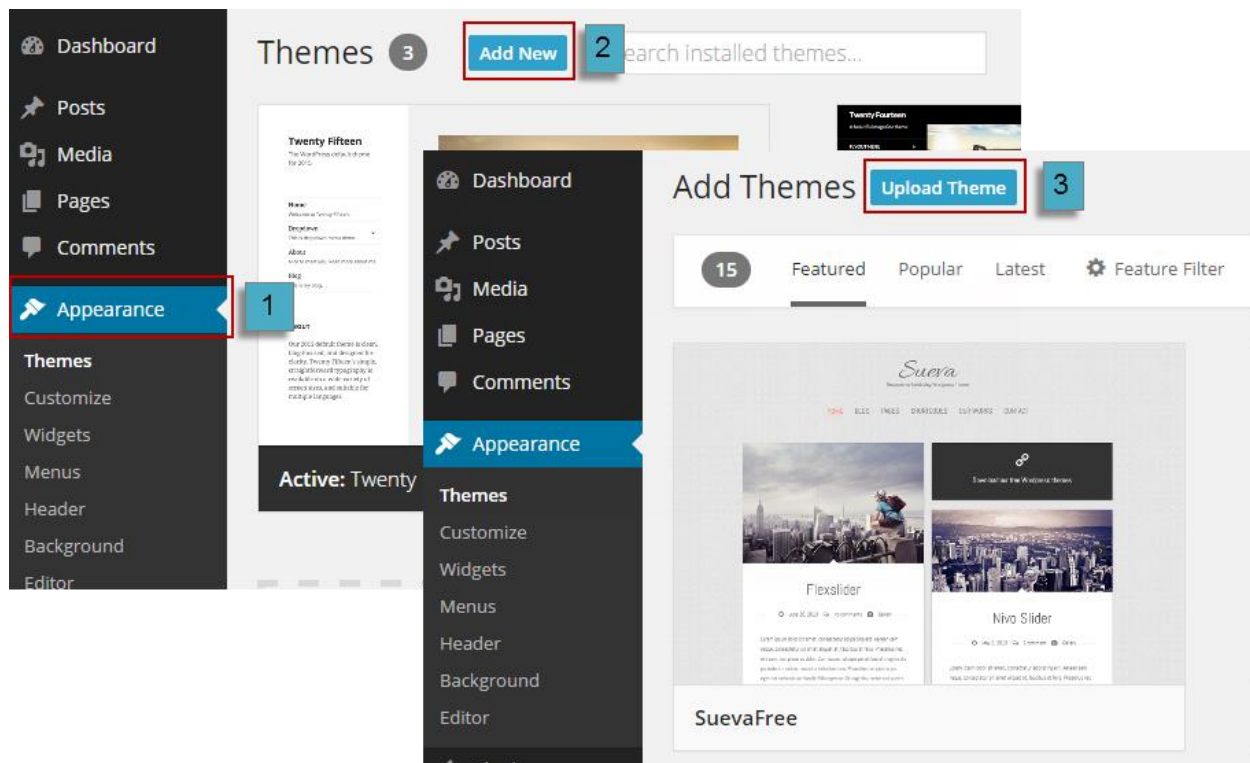

## INSTALLATION

There are two ways to install the theme. It is up to you to choose your preference.

### Install Theme via WordPress

*How to Install Wemusic via WordPress*

- **Step 1:** Login to your **WordPress Admin Panel**, navigate to **Appearance → Themes**
- **Step 2:** Click **Install Themes** on the top → hit **Upload** button.
- **Step 3:** Find “**noo-wemusic.zip**” file on your computer and click “**Install Now**”.
- **Step 4:** Once uploaded, activate the theme. Go to **Appearance → Themes** and activate it.
- **Step 5:** Then you will see a notification message to activate the required & recommended plugins: **Contact Form 7, Revolution Slider, Visual Composer**. Follow the steps to install and activate each plugin.

**Note:** If you see this message “**Are You Sure You Want To Do This**” when installing **noo-wemusic.zip** file via WordPress, it means that you have an upload max file size limit. Try to install the theme via FTP instead, or contact your host to increase the limit.

## Install Theme via FTP

### *How to install Wemusic via FTP*

- **Step 1:** Login into your hosting space via a FTP software.
- **Step 2:** Unzip the **noo-wemusic.zip** file and **ONLY** use the extracted Wemusic theme folder.
- **Step 3:** Upload the extracted Wemusic Theme folder into **wp-content→themes** folder.
- **Step 4:** Activate the newly installed theme by going to **Appearance→Themes** and clicking the **Activate** button.
- **Step 5:** Then you will see a notification message to activate the required & recommended plugins **Contact Form 7**, **Revolution Slider**, **Visual Composer**. Follow the steps to install and activate each plugin.

## Plugin Installation

Here is list of plugins that will come together with our theme when you activated it. You are recommended to install and activate these plugins base on your own need:

1. **Visual Composer:** The popular drag and drop page builder plugin with intuitive interface to build your content at ease. Save another **\$33** for this plugin with Wemusic.
2. **Contact Form 7:** Wemusic is fully compatible with Contact Form 7, the free form plugin recommended to create a nice form for your site.
3. **The Event Calendar:** This plugin is a carefully crafted, extensible plugin that lets you easily share your events.

After installation Wemusic theme, you will see a notification message to activate the required & recommended plugins. Follow the steps to install and activate each plugin.

If you want to install another WordPress plugin that doesn't include in our theme. Please following these steps:

- **Step 1:** Navigate to **Plugins**→ **Add New**.
- **Step 2:** Under **Search**, type in the name of WordPress Plugin or descriptive keyword, author, or tag in the search form or click a tag link below the search form.
- **Step 3:** Find the WordPress Plugin you wish to install
  - Click **Details** for more information about the Plugin and instructions you may wish to print or save to help setup the Plugin.
  - Click **Install Now** to install the WordPress Plugin.
- **Step 4:** You will see the popup window that will ask you to confirm your wish to install the Plugin.
- **Step 5:** If this is the first time you've installed a WordPress Plugin, you may need to enter the FTP login credential information. If you've installed a Plugin before, it will still have the login information. This information is available through your web server host.

- Step 6: Click **Proceed** to continue with the installation. The resulting installation screen will list the installation as successful or note any problems during the install.
- Step 7: If successful, click **Activate Plugin** to activate it, or **Return to Plugin Installer** for further actions.

## Import Demo Content

### *How To Import Wemusic Demo Content*

- **Step 1:** From **Admin Panel**, after installing and activating our theme, navigate to **Tools**, choose **Import** → **WordPress**.
- **Step 2:** Click **Choose File** and browse the demo content **.xml** file extracted from the **.zip** file you can download from Themeforest following guide in **DOWNLOAD THEME PACKAGE** section above. Click **Upload file and import** to upload the file.  
**Note:** If you have not installed **Deme Importer Plugin**, you may see the notification message to install the plugin. Click **Install Now** to install and move on.
- **Step 3:** You will first be asked to map the authors in the file to users on the blog. For each author, you may choose to map to an existing user on the blog or to create a new user.
- **Step 4:** WordPress will then import each of the posts, comments, and categories contained in this file into your blog.

See guide to import a sample content into a WordPress blog in [WordPress Codex](#).

**Note:** Not all the content in our demo will be included. Those files might be excluded from the content you can import:

- **Images:** our stocks might not be in the content due to license issues. Instead, we replace with grey images. Please change to your own pretty images for your site.
- **Sliders, Post and Pages:** not all sliders, posts and page in our demo will be consisted in our dummy date when you import. However, we still add some sliders and pages for your reference.

## Basic Setting

If you're new to WordPress, you'll probably see that your site after importing data is completely different from our demo. It's because some basic setting is needed on WordPress site. If you know the problem is and how to fix it, please skip this section.

### *Setup Home Page*

To set up home page, please follow these steps:

- **Step 1:** Navigate to **Settings**→ **Reading** tabs.
- **Step 2:** Select A Static Page option.
- **Step 3:** Choose the page you want as your home page from the Front Page dropdown list.
- **Step 4:** Here you can also select a page to display blog post from the Post page dropdown list.

Front page displays

☐ Your latest posts

☒ A [static page](#) (select below)

Front page:

Posts page:

Blog pages show at most  posts

Syndication feeds show the most recent  items

For each article in a feed, show

☒ Full text

☐ Summary

Search Engine Visibility

☒ Discourage search engines from indexing this site

*It is up to search engines to honor this request.*

[Save Changes](#)

### *Assign Menu*

Please go to **Appearance** → **Menus** then find **Menu Settings** → **Theme Locations** at the bottom. Check the Primary Menu then save it. This action will assign the menu “**Main Menu**” to the location Primary (the main menu) on our theme. You can see more detail at: [http://codex.wordpress.org/Appearance Menus Screen](http://codex.wordpress.org/Appearance_Menus_Screen)

### *Change Permalink*

Please go to Permalinks setting: **Settings** → **Permalinks** then change the Common settings to Post name. You can see more detail at: [http://codex.wordpress.org/Using Permalinks](http://codex.wordpress.org/Using_Permalinks). After doing these steps, your site will look like our demo, you can move on to process to build your content.

## Update Theme

### First way: Manual update

There are 3 methods to update the theme:

1. **Manually via WordPress admin:** After downloading the package from Themeforest, you can delete the old theme and install the new theme. All your settings with our theme will be preserved but it sometimes results in losing Menu or Widgets settings because this method actually switches on/off the menu and widget location which has been registered by this theme.
2. **Manually via FTP:** After downloading the package from Themeforest, you can extract it and using FTP client like FileZilla to remove the old theme and upload the new theme. With this method, all your settings, including the menu and widget will be persevered.
3. **Using Envato WordPress Toolkit introduced on this link:** <http://premium.wpmudev.org/blog/how-to-update-themeforest-themes-with-the-envato-wordpress-toolkit/>. This is the plugin developed by Envato to auto update WordPress theme bought in Themeforest.

### Second way: Automatic Update

Please follow these steps to update theme:

- **Step 1:** Hover into username then choose Download
- **Step 2:** Select "License certificate and purchase code"
- **Step 3:** In Admin Panel, choose Settings, click "NOO Wemusic License". You will see the message Please enter your license key to enable updates to NOO Wemusic.
- **Step 4:** Enter code into License key

Note: Auto update is available from version 1.0.0 and above

The screenshot shows the Envato Market account page. The top navigation bar includes the Envato Market logo, links to Envato Studio, Start selling, Forums, Community, Affiliates, and Help. Below this is a secondary navigation bar with logos for themeforest, codecanyon, videohive, audiojungle, graphicriver, and photodune. The main content area is titled "Home > My Account" and "Downloads" (7 Items). A sidebar on the right contains a user profile menu with options like Profile, Envato Account, Settings, Downloads, Favorites, Collections, Follow Feed, Statement, Make a Deposit, Author Dashboard, Upload, Portfolio, Earnings, and Withdrawals. The main content area shows a list of items, with the first item being "Jobmonster - Job Board WordPress Theme". A red arrow labeled "1" points to the "Downloads" link in the sidebar. A red arrow labeled "2" points to the "Download" button for the Jobmonster theme. A red arrow labeled "3" points to the "License certificate & purchase code (PDF)" option in the download menu. Below the download menu, a text box shows the license details for the Jobmonster theme, including the item ID (10965446) and the purchase code (redacted). A red arrow labeled "3" points to the purchase code. To the right of the main content area, there are two sections: "Download Immediately" and "Download Managers".

**Download Immediately**

You should download your purchases **immediately** as items may be removed from time to time.

**Download Managers**

Envato recommends against the use of download managers to download your purchased

## THEME CUSTOMIZER

Our Theme customizer works as the original WordPress customizer feature but be much more versatile. All our theme options can be changed in our Customizer on the left side and live previewed instantly on right side. With this intuitive interface, you can customize your website as you wish at your fingertips without writing a line of code.

To start using **Customizer** in **Admin Panel**, navigate to **Customizer**, you will be redirected to a live preview screen where you can change options on left side and preview your site on right side promptly. All your change will not be committed and viewed on your site until you click **Save & Publish** on top right of **Customizer** bar. You also are able to **Export** your setting in **Customizer** and **Import** to apply for other sites.

## Site Enhancement

- **Custom Favicon:** A favicon is a simple square image viewable in browsers for users to identify your website among many tabs. Ideally, it should be a 32x32 pixels or a 16x16 pixels. Most modern browsers can display a favicon in PNG format but older versions of Internet Explorer may not. To make sure your favicon be shown nicely, it is recommended to be in .ico format. Add your favicon in our customizer simply by clicking “**Open Library**”

button in “**Custom Favicon**”, selecting your existing image or uploading new image.

- **Back To Top Button:** Back To Top Button will appear in the right bottom when users scroll down. Enable/Disable as your preference.
- **Enable Page Heading:** Page Heading will appear on the header of page. When you **Enable** this option, you will have header background image on blog-page, department-page, doctor-page.
- **Enable Breadcrumbs:** Breadcrumbs will appear below header title of page. Enable/Disable as your preference.
- **Enable MailChimp Settings:** This option allows you to turn on MailChimp Subscribe. You need to add MailChimp API key to connect your account. To learn more about MailChimp API key you can go to [HERE](#).

## Design and Layout

- **Style Layout:** This option will help you set Style & Layout for your site. We provide two layout styles, include: Boxed Layout and Fullwidth layout. With Boxed layout, you will have additional options for max site width, background color or image setting.
- **Color:** This option allows you to set the color for links and various elements for your site.

**Primary Color:** you can change primary color by this option. There is table of color, which allows you to select color you want or enter your color code on box.

## Typography

You can customize your Typography settings here. Wemusic integrated all Google Fonts. See font preview at [Google Fonts](#).

- **Custom Fonts:** Enable Custom Fonts to customize font, font size and other settings for heading and body text.
- **Custom Font Color:** Enable Custom Font Color to customize font color of heading and body.
- **Headings:** If checked on Transform to Uppercase, you will have heading `<h1>` `<h2>` `<h3>` which is uppercase type.

- **Body:** You can change font size of body by selecting font size from dropdown list.

## Header

Customize settings for Heading including Navigation Bar, Logo and NavBar Alignment.

### *Navigation Bar*

This section adjusts settings for Navigation Bar. You also can customize some settings for the Toggle Button on Mobile in this section.

- **NavBar Position:** This option allows you to select type of NavBar, including Static Top or Fixed Top.
- **Show Shopping Cart:** This option allows you turn on/off shopping cart button on the main menu.
- **Use Custom NavBar Font and color:** If On, you can change font, font size, link color and link hover color for header font. If you click on Transform to Uppercase checkbox the NavBar will transform Uppercase.

### *Logo*

Wemusic allows to add image file or use text for logo. You will see button to turn **On/Off Use Image for Logo**.

If **Off**, you will have option to enter your site name, select logo font from Google font, font size and color for your logo.

If **On**, you will have two logo images to upload. The first one is for standard desktop while the second one is for retina ready devices (optional). Click the **Upload** button and select your logo file. Upload your logo image and retina one (a larger image, with double the amount of pixels that your image will be displayed at). Enter your image height you want to display on navigation bar and we will do the calculation part for you to make it look great on all screen size.

### *NavBar Alignment*

Adjust height of navigation bar, space between links and size of mobile navigation button.

## Footer

Footer contains Widgetized area and Footer Bottom. You can change any parts.

- **Upload Your Footer:** You can upload one image from Media Library or your computer for footer.
- **Footer Columns (Widgetized):** This option allows to set the footer column number from drop-down list. Number of columns can be from 1 to 4. You also can select **None to leave it blank (no footer content)**.
- **Footer bottom:** You can turn on/off footer bottom for your site.
- **Footer Content (HTML):** Enter your content for Top Footer. You need to add content by Custom HTML content.

## Widgets

This section enables you to add and customize Widgets on you preview site. It includes number of Footer Columns due to setting in above section: Footer settings.

**Footer Column #i:** You will see number of footer columns corresponding to footer settings. Add text, image or other widget by hitting **Add a Widget** button.

## Blog

### *Post List*

Choose layout settings for your Post List.

- **Blog Layout:** It can be full-width, with right sidebar and with left sidebar. If you choose layout with sidebar, select blog sidebar for your blog page.
- **Blog sidebar:** Choose sidebar for your blog page.
- **Heading Background Image:** You will have background image of blog page if you click “**Select Image**” button then select image from Library or choosing from your computer.
- **Show Post Meta:** Check the box to show post me-ta of blog page.
- **Show Read-more link:** Check the box to show read more link.
- **Excerpt Length:** The number of character displayed on post selection.

### *Single Post*

- **Post Layout:** Choose Post layout same as blog layout by checking the boxes beside options or uncheck to choose another layout.

- **Show Post Meta:** If checked, post meta will display on each post. Similarly, you can choose show/hide post tags and author's bio.
- **Enable Social Sharing: Enable/Disable Social Sharing.** If enable, you enable visitor to share your post by Facebook, Twitter, Google+, Pinterest and LinkedIn.

## Event

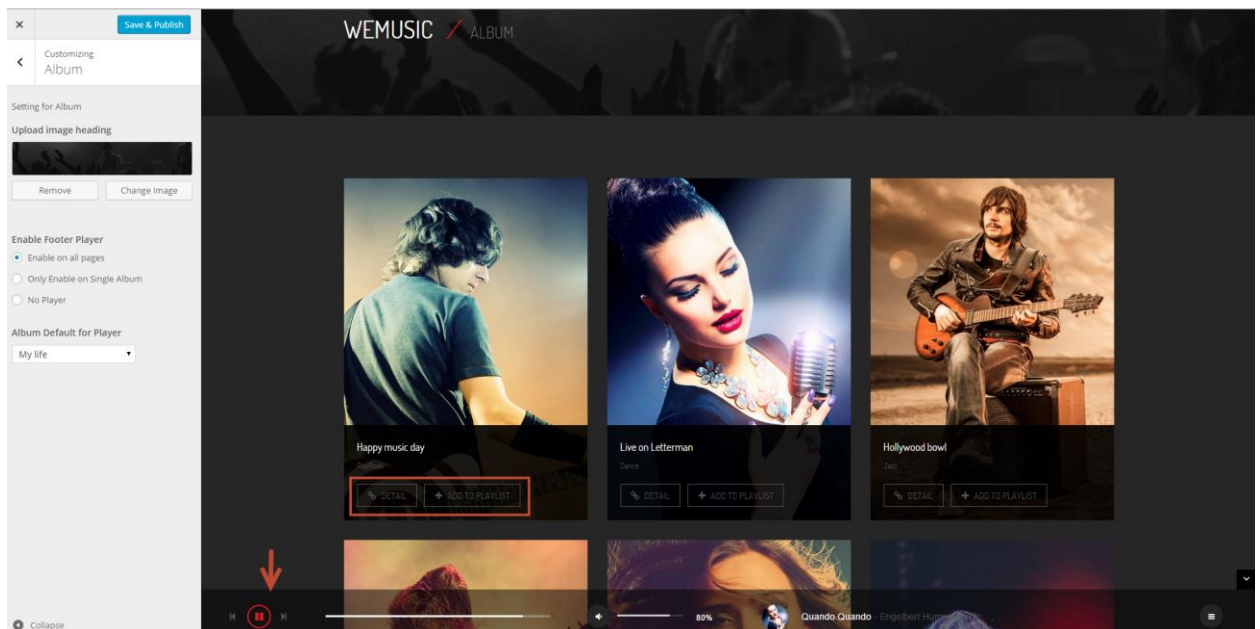

This section will help you set up all settings for Event page.

- **Upload Image heading:** You will have header image of event page if you click **"Select Image"** button then select image from Library or choosing from your computer.

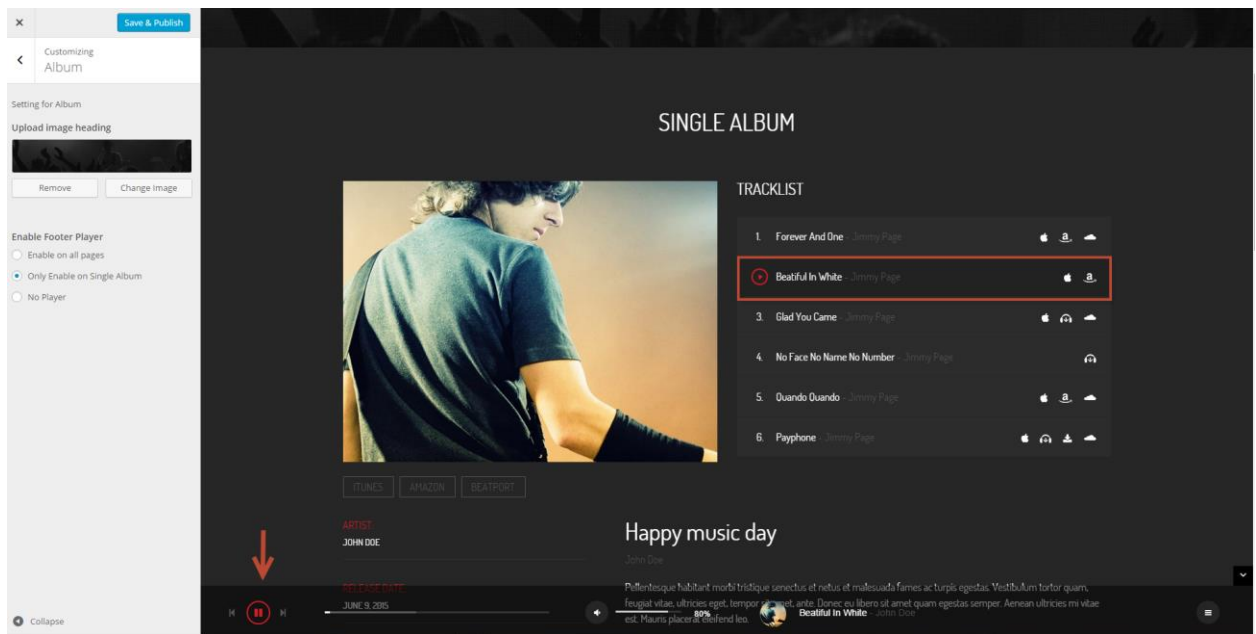

## Album

This section will help you set up image heading and choose Footer player. You will have three options here:

- **Enable on all pages:** If you check this box then you will have footer player displayed on all the pages

- **Only Enable on Single Album:** If this box is ticked then footer player will be shown on Single Album page

- **No Player:** If this box is checked, footer player will not be displayed in any pages

## Woocommerce

### Shop Page

This section provides some options which will help you to choose Layout and Headline settings for your Shop page.

- **Shop Layout:** You can choose different layout for Shop page, including Full-Width, With Right Sidebar or With Left Sidebar. If you choose layout with sidebar, select shop sidebar for your shop.
- **Heading Background Image:** You can choose Heading Background of Shop page by clicking "Select Image" button and then enter title for Shop page.
- **Products Per Page:** You can set number of products displayed per page. Limited on 4 to 50 products.

### Single Product

Same as with Shop Layout you can choose Layout for Single Product. Besides that, you can enter number of Related Products Count.

## Custom Code

In this section you can add custom JavaScript and CSS to your site. You Google analytics tracking code should be added to Custom JavaScript field.

## Import/Export Setting

All themes from NooTheme share the same theme settings structure so you can export then import setting from one theme to another conveniently without any problem.

- **Import Settings:** Click Upload button then choose a JSON file (.json) from your computer to import setting to this theme. All the settings will be loaded for preview here and will not be saved until you click button “Save and Publish”.
- **Export Setting:** Simply click Download button to export all your settings to a JSON file (.json). You then can use that file to restore theme settings to any theme of NooTheme.

## HEADER

### Adding Logo

Wemusic allows you to add image file or use text for logo. For the image file, you can upload at any size and it will be adjusted to fit into the menu. There is an option for you to upload a retina logo to keep your logo retina ready.

- **Step 1:** Navigate to **Customizer**→ **Header**→ **Logo** tab to access the logo options.
- **Step 2:** You will see a button to turn **On/Off Use Image for Logo**.  
If **Off**, you will have option to enter your site name, select logo font from Google font, font size and color for your logo.  
If **On**, you will have two logo images to upload. The first one is for standard desktop while the second one is for retina ready devices (optional). Click the **Upload** button and select your logo file.

- **Step 3:** If you are uploading a retina logo (optional), you need to upload a larger image of which dimensions are 2 times larger than dimension that your standard logo will be displayed.
- **Step 4:** If you are using a retina logo, you must enter the logo height for standard logo.

## Setting Up Menu

Wemusic supports custom WordPress menu, this is one area where you can assign a menu: Main Menu. Following the guide below to learn how to create new menu on Wemusic theme.

- **Step 1:** Navigate to **Appearance→ Menus** from Admin panel.
- **Step 2:** Click the **Create A New Menu** link to make a new menu. Enter the name then click **Create Menu** button.
- **Step 3:** To add menu item, select pages and post on the left hand side and click Add to Menu button. You also can add custom links or post categories into menu.
- **Step 4:** To create a dropdown menu, simply drag a menu item below of another menu item and slightly to the right, and it will lock into place and create a dropdown section.
- **Step 6:** After setting up your menu, scroll down to the bottom of the page to assign the menu on the Theme Location box.
- **Step 7:** Once it's all done, make sure you click the **Save Menu** button.

Below is the screenshot of menu structure and place to assign menu:

## PAGE

In this section, you will find how to create a new page and number of important page of Wemusic using our shortcode and widgets. We also did some change to the default WordPress page setup by adding some page templates and preset options for you to build your page fluidly.

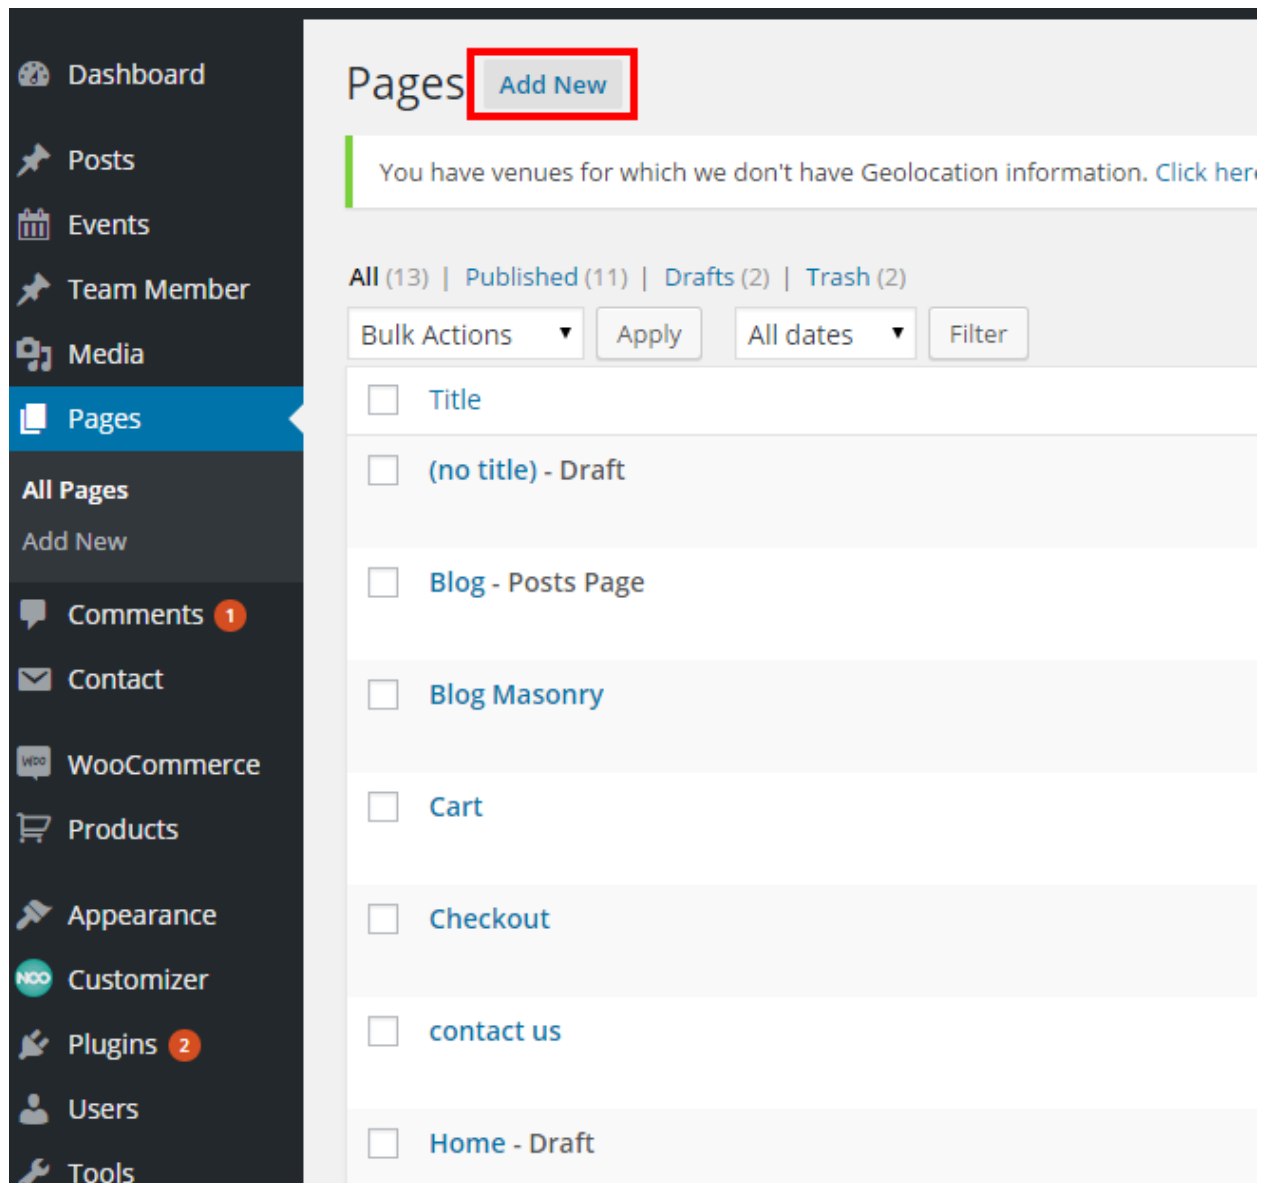

### Create New Page

Please follow these steps to create your pages:

- **Step 1:** In **Admin Panel**, choose Page, click “**Add New**” on top then enter your page title. You can custom **slug** of the page in Permalink field appeared after entering title.

If you need to know more about [Pages](#) in WordPress, use the Help tab in the upper right of your screen.

- **Step 2:** In **Page Attributes** box on the right side, choose your Parent page. It is set by default as no parent. Pages are usually ordered alphabetically, but you can choose your own order by entering a number in Order field.
- **Step 3:** Also in **Page Attributes** box, choose your **Page Template** in dropdown list. See below Page Template list for more detail.
- **Step 4:** Start editing your page content in the editing field. You can choose to edit your content using Visual or Text editor. To build content for you page you will need to our provided Shortcodes.
- **Step 5:** Make other settings for the page in meta-boxes under editing field. Once you get your settings done, click **Publish** your page.

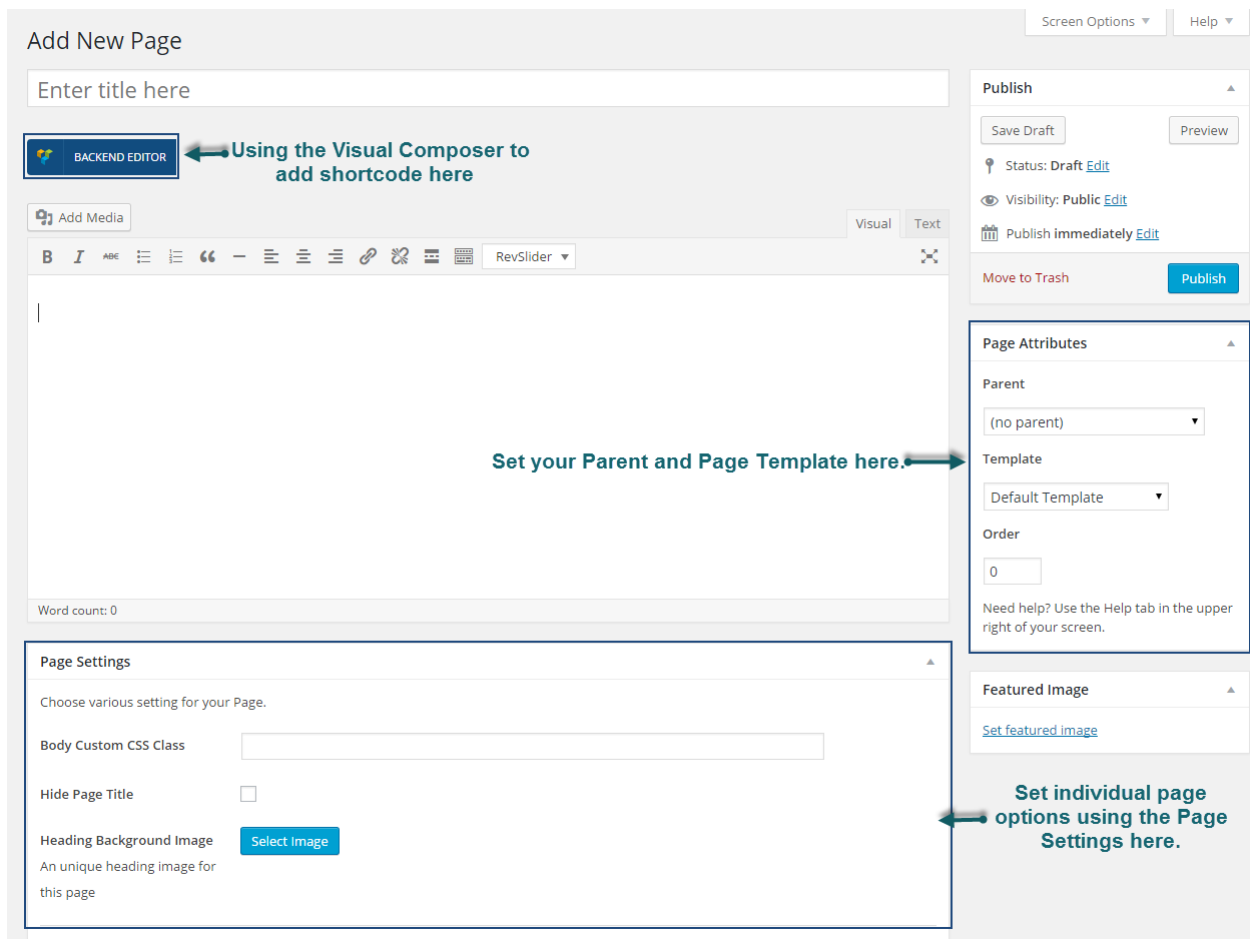

The screenshot displays the WordPress 'Pages' management screen. On the left, a dark sidebar contains navigation links: Dashboard, Posts, Events, Team Member, Media, **Pages** (highlighted), All Pages, Add New, Comments (1), Contact, WooCommerce, Products, Appearance, Customizer, Plugins (2), Users, and Tools. The main area is titled 'Pages' and features a red-outlined 'Add New' button. Below the title, a message states: 'You have venues for which we don't have Geolocation information. [Click here](#)'. A filter bar shows 'All (13) | Published (11) | Drafts (2) | Trash (2)'. Below this are controls for 'Bulk Actions', 'Apply', 'All dates', and 'Filter'. The page list includes the following entries, each with a checkbox:

- ☐ Title
- ☐ (no title) - Draft
- ☐ Blog - Posts Page
- ☐ Blog Masonry
- ☐ Cart
- ☐ Checkout
- ☐ contact us
- ☐ Home - Draft

Here is screenshot that shows you the various areas and description of the page settings described above:

## Page Templates

We have built some specific Wemusic page templates for you. Here is the list and their short description:

- **Default Template:** The default template can be used for any page. You can customize and add shortcode to build Homepage, Contact, Blog...
- **Full- width Template:** This template is set to be full-width that can be used for Homepage, About page....
- **Page with Left Sidebar:** You can have your page with left sidebar with this template. Use this template for your blog or whichever page you want to have sidebar. Select Page sidebar to display in sidebar position in Sidebar box.

- **Page with Right Sidebar:** Also with sidebar but the right one, and of course, its use is quite the same. Choose this template for your blog whichever page you want to have sidebar. Select Page sidebar to display in sidebar position in Sidebar box.

## Page Settings

We have created some specific Wemusic page settings which will help you to build splendid pages for your site. Following the list of options below to see how they work:

- **Body Custom CSS Class:** Add custom CSS class to <body> elements.
- **Hide Page Title:** If you checked, page title won't be displayed on header of your page.
- **Heading Background Image:** This option allows you to select a unique heading image for your page.

## Create Contact page

If you want to create Contact page as in our demo, create a new page (You can enter title: Contact Us), add 2 columns then add Contact Form 7 shortcode and add Text Block shortcode with Custom HTML in each column:

```
<ul class="contact-info">
```

```
    <li><span class="contact-title">VENUES</span><i class="fa fa-map-marker"> </i>69 South Park Avenue San Francisco, CA 14782 USA</li>
```

```
    <li><span class="contact-title">TELEPHONE</span><i class="fa fa-envelope-o"> </i>support@companyname.com</li>
```

```
    <li><span class="contact-title">EMAIL</span><i class="fa fa-phone"> </i>(00) 123 456 789</li>
```

```

## BLOG

Wemusic supports 4 post formats. Follow below steps to create blog posts assigned on blog page list.

### Create New Post

- **Step 1:** In your **Admin Panel**, go to **Post** and navigate to **Add New**.
- **Step 2:** Enter your title and choose Post Format from Format box on the right side which shows different post format options: **Standard, Image, Gallery and Video**.
- **Step 3:** Add your post content in editing field. You can use our shortcode to build your content where needed.
- **Step 4:** Add **Categories** for the post from the **Categories** box on the right side. You can add new category or choose from existing categories. Check the box to select Categories for your post. Add relevant **Tags** for your post in the **Tags** box, set Featured image on the right side and other setting from the sections below Editing field.  
If you need detailed guide about post settings in **WordPress**, please find in [WordPress Codex](#).
- **Step 5:** All done, click **Publish** to publish your post.

## Blog Post Setting

### Global Setting

- **Body Custom CSS Class:** Add a custom CSS class to the <body> element. Separate class names with a space.
- **Page Layout:** You can choose Layout of Single Post page, includes Full Width. With Right Sidebar and With Left Sidebar style.

### Post Format Setting

- **Gallery Settings:** When selecting Gallery Format, you will have Gallery Setting meta-box to add as many images as you want into your gallery and manage your preview content as Featured Image, First Image on Gallery or Image Slideshow.
- **Image Settings:** When you selecting Image Format for you post, you will have Image Settings meta-box to choose main image of the post. Set Feature Image as main image for preview content or Choose Your Image if you want to set another image as main image for preview content.
- **Video Settings:** When selecting Video Format, you will have Video Setting meta-box where you can add video URL, and embedded video code, aspect

ratio and preview content as Featured Image, Video or Featured Image as Video Thumbnail.

- **Quote Settings:** When selecting Quote Format, you will have Quote Setting meta-box where you can add quote and citation.

## Assign Blog page

How to assign a page as blog page

- **Step 1:** Navigate to **Pages→ Create New Page**.
- **Step 2:** Enter a new name for your page, then find the Page Attributes box on right side.
- **Step 3:** Select the Default page template from dropdown list.
- **Step 4:** Click “**Publish**” to save the page
- **Step 5:** To set the page as your post page, navigate to **Settings→ Reading** and select your blog page name for the Posts Page. All your posts will be automatically displayed on the page. You can set number of posts per page in Reading Settings, too.

## Reading Settings

## THE EVENTS CALENDAR

In Wemusic theme, we use The Events Calendar plugin which will help you to create events, present event listing and event calendar. You can show your events calendar in grid layout, list or day by day. You can set the default view and optional views that visitors can choose from dropdown list and many more available event settings.

### Create A New Event

To create a new event, please follow these steps:

- **Step 1:** Go to **Dashboard** → **Navigate to Events** → **Add New Event**
- **Step 2:** Enter title and description for event
- **Step 3:** Choose Event Categories, Event Options and set Featured Image for event. You can upload some image for Event Gallery, too.
- **Step 4:** Scroll down your mouse you will see more field of event information including Event Time & Date, Location, Organizer and Website. Please fill out those information.
- **Step 5:** Add tickets by adding new ticket button which customers can buy ticket to join event.
- **Step 6:** All done, click “**Publish**” to publish event.

## The Event Calendar Setting

To see all settings of Event Calendar plugin, please navigate to Events → Settings you will see General/ Display/ Default Content/ Additional Fields/ Licenses/ and Help tab. Please see this guide below to understand all settings:

## *General Tab*

## General Settings

Number of events to show per page

Use Javascript to control date filtering

Enable live ajax for datepicker on front end (User submit not required).

Recurring event instances

Show only the first instance of each recurring event (only affects list-style views).

Front-end recurring event instances toggle

Allow users to decide whether to show all instances of a recurring event.

Clean up recurring events after

months

Automatically remove recurring event instances older than this

Create recurring events in advance for

months

Recurring events will be created this far in advance

Show comments

Enable comments on event pages.

Include events in main blog loop

Show events with the site's other posts. When this box is checked, events will also continue to appear on the default events page.

Events URL slug

The slug used for building the events URL. Your current events URL is: <http://wpthemes.noothemes.com/noopress/wemusic/events/>

Single event URL slug

The above should ideally be plural, and this singular. Your single event URL is: <http://wpthemes.noothemes.com/noopress/wemusic/event/single-post-name/>

End of day cutoff

Have an event that runs past midnight? Select a time after that event's end to avoid showing the event on the next day's calendar.

Default currency symbol

Set the default currency symbol for event costs. Note that this only impacts future events, and changes made will not apply retroactively.

Currency symbol follows value

The currency symbol normally precedes the value. Enabling this option positions the symbol after the value.

## Map Settings

Enable Google Maps

Check to enable maps for events and venues.

Map view search distance limit

Set the distance that the location search covers (find events within X distance units of location search input).

Map view distance unit

Fix geolocation data

You have 1 venues for which we don't have geolocation data. We need to use the Google Maps API to get that information. Doing this may take a while (aprox. 1 minute for every 200 venues).

Google Maps default zoom level

0 = zoomed out; 21 = zoomed in.

## Miscellaneous Settings

Duplicate Venues & Organizers

You might find duplicate venues and organizers when updating The Events Calendar from a pre-3.0 version. Click this button to automatically merge identical venues and organizers.

Debug mode

Enable this option to log debug information. By default this will log to your server PHP error log. If you'd like to see the log messages in your browser, then we recommend that you install the [Debug Bar Plugin](#) and look for the "Tribe" tab in the debug output.

View Welcome Page

View the page that displayed when you initially installed the plugin.

View Update Page

View the page that displayed when you updated the plugin.

Save Changes

## General Settings

- **Number of events to show per page:** You can enter the number of events which are shown per page.
- **Use Javascript to control date filtering:** If checked, enable live ajax for date-picker on frontend.
- **Recurring event instances:** If checked, show only the first instance of each recurring event (only affects list-style views).
- **Front-end recurring event instances toggle:** Allow users to decide whether to show all instances of a recurring event.
- **Clean up recurring events after:** Enter the number of months you want to automatically remove recurring event instances older than this.
- **Create recurring events in advance for:** Recurring events will be created this far in advance.
- **Show comments:** If checked, you can enable comments on event pages.
- **Include events in main blog loop:** If checked, you can show events with the site's other post. When this box is checked, events will also continue to appear on the default events page.
- **Events URL slug:** Enter the slug here. The slug used for building the events URL.
- **Single event URL slug:** Enter the slug here. The slug used for building the events URL.
- **End of day cutoff:** Select a time from dropdown list after that event's end to avoid showing the event on the next day's calendar.
- **Default currency symbol:** Set the default currency symbol for event costs. Note that this only impacts future events and changes made will not apply retroactively.
- **Currency symbol follows value:** Enable this option positions the symbol after the value.

## Map Settings

This section allows you to configure all options of Map.

- **Enable Google Map:** If checked, enable maps for events and venues.

- **Map view search distance limit:** Set the distance that the location search covers.
- **Map view distance unit:** Select unit which map distance is shown. You can choose Miles or Kilometers.
- **Fix geolocation data:** You have 1 venues for which we don't have geolocation data. We need to use the Google Map API to get that information. Doing this may take a while.
- **Google Map default zoom level:** Enter the number that Google Maps zoom

### *Display Settings*

The settings below control display of your calendar.

## Basic Template Settings

- **Default stylesheet used for events templates:** You can choose stylesheet for your events templates. Including Skeleton Styles (Only includes enough css to achieve complex layouts like calendar and week view), Full Styles (More detailed styling, tries to grab styles from your theme).
- **Events Template:** Choose a page template to control the appearance of your calendar and event content.

- **Step 3:** Scroll down your mouse, you will see Team Member Information and Social options. Please fill out information for Team Member Information (Remember to select image for your team member) and add your social in Social section.
- **Step 4:** All done, click “**Publish**” to save your team member.

### *Create Members page*

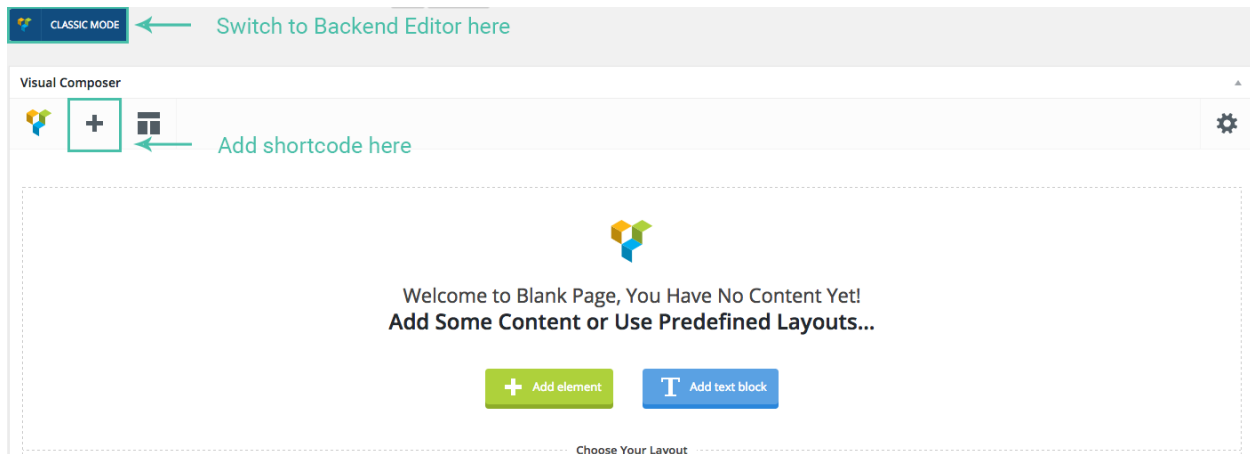

To create Members page which shows all team members, create a new page (remember set title for page) and add Noo Team shortcode on page. You can configure some options in this shortcode.

## WEMUSIC SHORTCODE

Instead of writing lines of code to build elements, we built Wemusic with number of premade shortcodes that enable you to create many elements you see in our demo in fingertips. By installing Visual Composer (the page builder plugin integrated in the theme package), you will have the Visual Backend Editor where every shortcodes are displayed visually before your eyes and easily generated in

several clicks. In addition to Default Visual Composer shortcodes, Wemusic comes with 6 specific shortcodes. To generate the shortcodes, go to Backend Editor, click the “+” icon to add shortcode. Navigate to Wemusic tab to find a shortcode you want to use. You can add those shortcode to any pages or posts for your own use.

There are 12 custom Wemusic Shortcodes. Below are list 12 shortcodes and their attributes:

## Noo Blog Masonry

Use this shortcode if you want to build Blog Masonry page.

This shortcode will help you to get all albums that will be displayed on Homepage.

## WOO COMMERCE

When Woo Commerce is installed in your site, you are able to create online shop. Below this guide to create Product using Woo Commerce plugin.

### Create A New Product For Shop

- **Step 1:** Navigate to Product from WordPress admin sidebar.
- **Step 2:** Click **Add New** to make new product. Create title and insert your product content in the editing field.
- **Step 3:** Add Categories from right side. To assign it to the product, check the box next to the category name.
- **Step 4:** Add Tags from the right side. Type the name of tags in the field.
- **Step 5:** Select featured image for product from hitting button “Set featured images”. You can then select products images to add into Product Gallery.
- **Step 6:** Scroll down your mouse, you will see Product Data option. Remember choose Product Data: Simple Product.
- **Step 7:** Once you have finished, click “**Publish**” to save product.

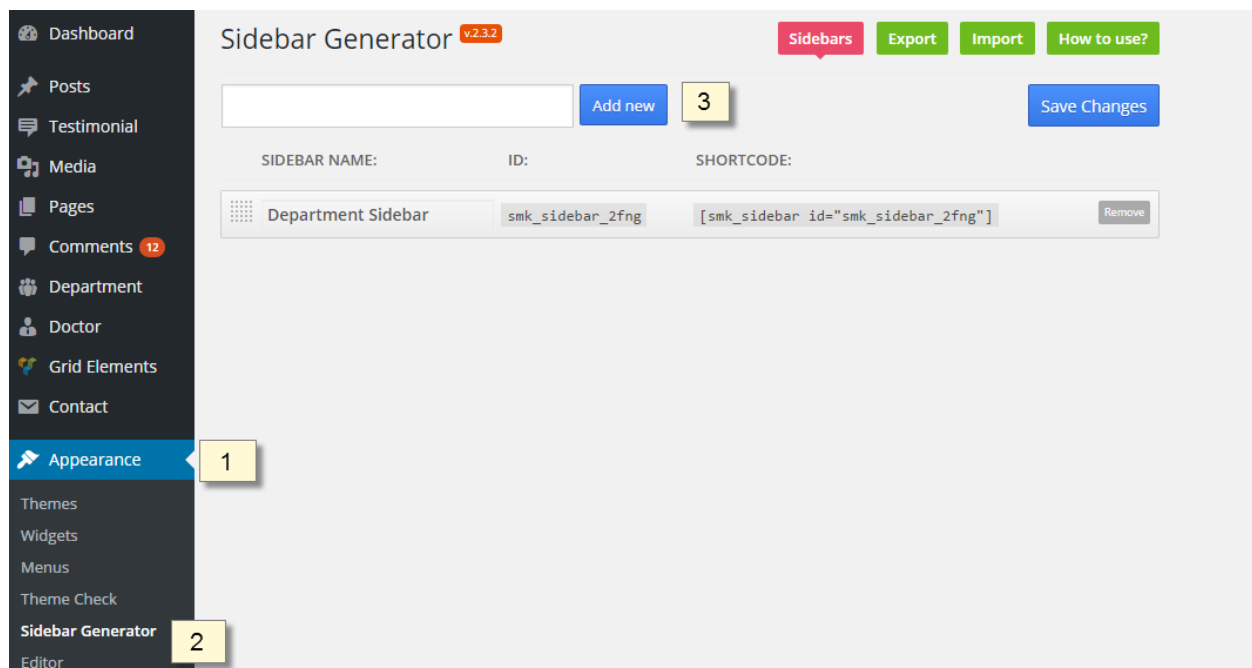

## SIDEBAR

Wemusic allows you to create an unlimited number of sidebar. Each page or post can come with unique sidebar.

To select a sidebar for post or page, make sure you set page template with sidebar then you can choose a sidebar you want to display from Sidebar dropdown list on the right side. You may need to create several separate sidebars to use for different pages and posts. Follow these steps to generate a sidebar and add widgets to it.

## Create sidebar

- **Step 1:** Navigate to **Appearance**→ **Sidebar Generator** and click the **Add New** button, enter sidebar title then save. You can add as many sidebars as you need.
- **Step 2:** Once you are done, you need to add Widgets to the sidebar you just created.
- **Step 3:** Navigate to **Appearance**→ **Widgets** and find your sidebar on the right side.
- **Step 4:** On the left hand side you will see all the widgets you can use, simply drag and drop the widget you want into your sidebar on the right hand site.
- **Step 5:** Make sure you click **Save** to save the widgets added to your sidebar.

## Add Sidebar Widget

In addition to default WordPress widgets, Wemusic included **Noo Recent News**, **Noo Information**, **Noo Social** and **Noo Request Information** widgets. You can add any widget and any number of widgets into your sidebar. All widgets are accessible from **Appearance**→ **Widgets** and easily dragged and dropped into your sidebar.

- **Step 1:** Navigate to **Appearance**→ **Widgets** to access the list of widgets and widget section that they can be added. The left hand side shows all the

widgets you can use. The right hand side shows all different sections you can add widgets to.

- **Step 2:** Simply drag and drop the widget you want into the widgets section on the right hand side.
- **Step 3:** Don't forget to click save changes after you customize any widget in sidebar.

## Wemusic Widget Sidebar

Widgets are frequently used to create sidebar or footer. Beside default WordPress widgets, Medicus added some sidebar widgets. To view all Widgets, navigate to **Appearance → Widgets**. You can drag and drop widgets from left sidebar list into footer columns or sidebars as you want. Here is the list of

Wemusic Custom Widget you may want to use to have sidebar and footer like in our demo site.

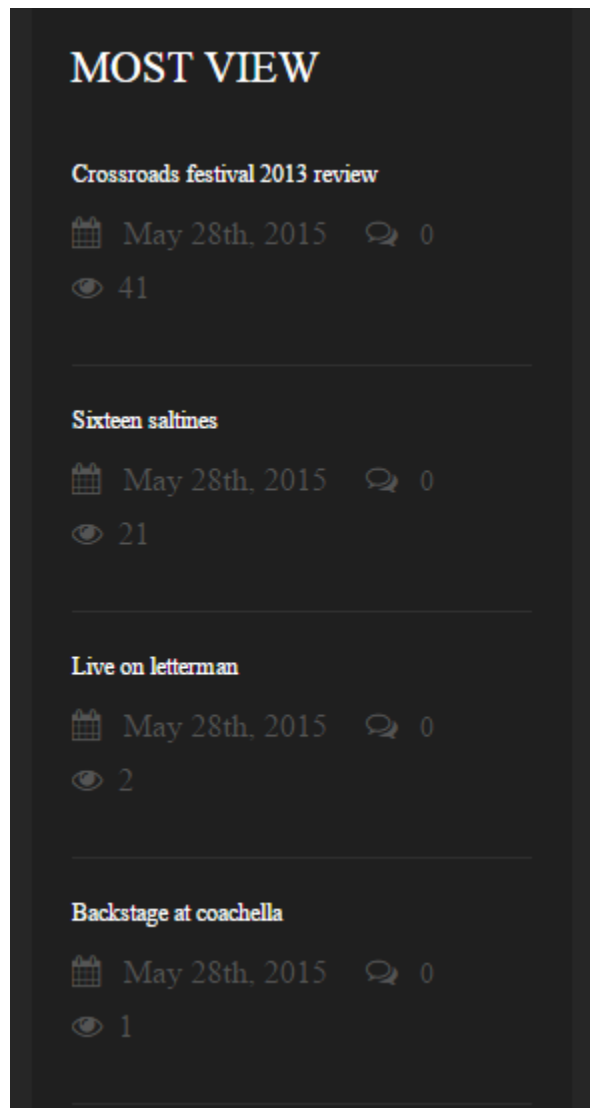

### *Noo Counter Social*

This widget is used to count the number of customers subscribing you on social.

### *Noo Most View*

Use this widget if you want to show all post which is most viewed by viewer.

### *Noo Information*

This widget is used to show your contact information.

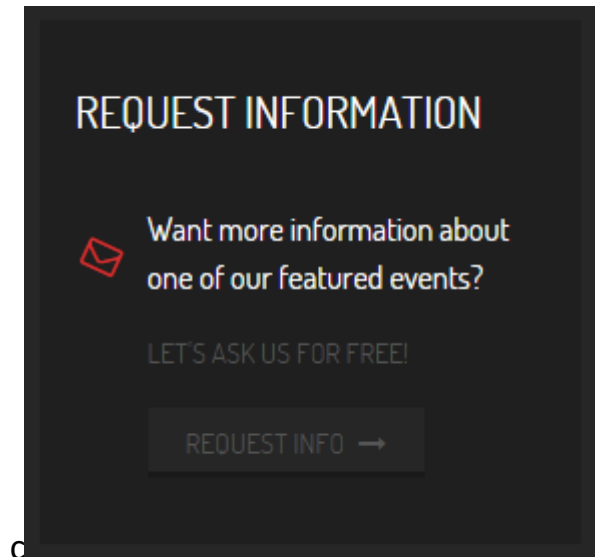

### *Noo Social*

Use this widget if you want to show list social on footer position.

### *Noo Request Information*

This widget is used to show Request information form on events page.

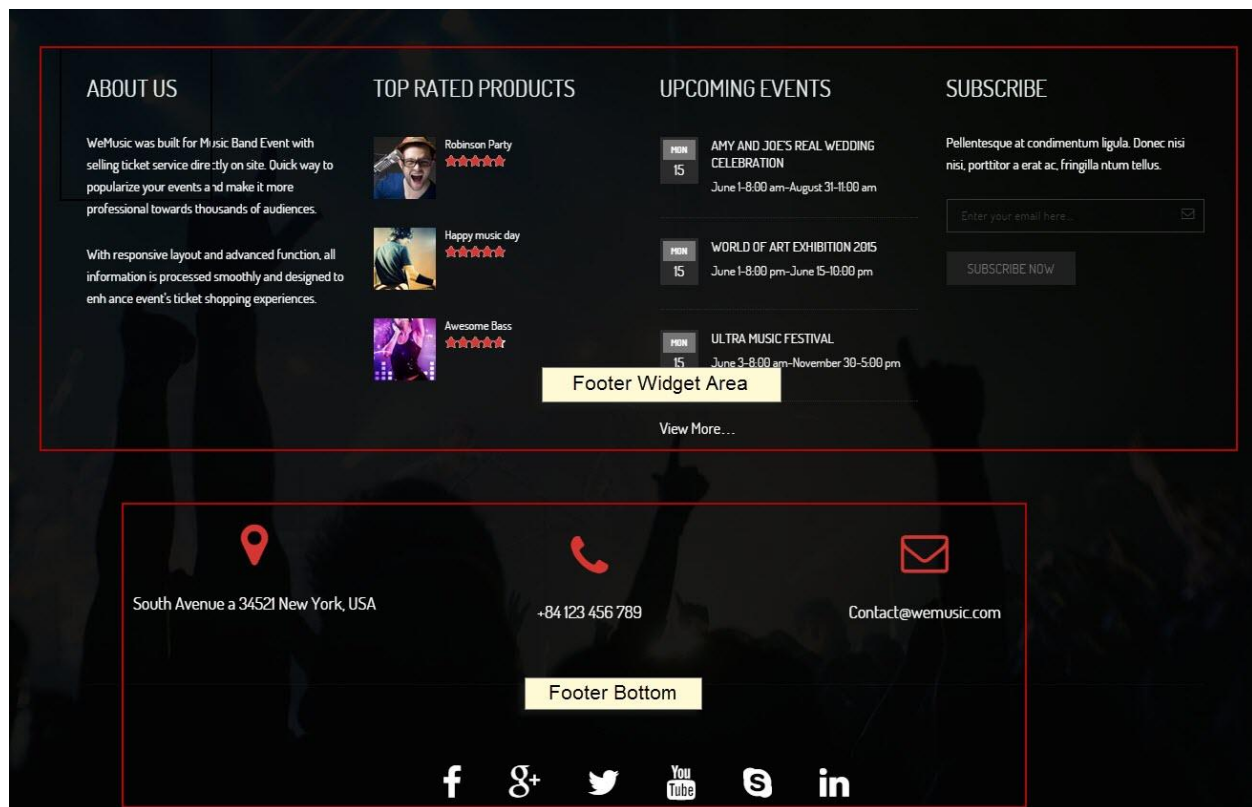

### *Noo Mail Chimps*

This widget will help you to add subscribe form. It can be displayed on Footer of page.

## FOOTER

The Wemusic footer consists of the Footer Bottom and Footer Widget Area. Both of these areas can be configured in Customizer on the Footer tab. The widget area consists 4 columns in total, each column can have its own set of widget. You can select to show 1,2,3,4 columns in the footer widget section. The following sections will cover each of these aspects of footer.

## Add Footer Widgets

- **Step 1:** From Admin panel, navigate to **Customizer** → **Footer**, set the footer column number from dropdown list. Number of columns can be from 1 to 4. You also can select None to leave it blank (no footer content).
- **Step 2:** To add widgets into footer, you can opt to add in **Customizer** → **Widgets** tab directly or come back to **Admin panel** → **Appearance** → **Widgets**.
- **Step 3:** In **Customizer** → **Widget**, you will see number of Noo – Footer column #i tab corresponding to number of columns you select in step 1. In each tab, hit Add a Widget button and choose Widget from widget list.

If you add widget in Appearance → Widgets, you will see Noo – Footer Column #i widget section on the right hand side. Your widgets are located on the left hand side. Simply drag and drop the widgets you want from the left side into the sliding bar widget sections on the right side.

- **Step 4:** Don't forget to save changes after you customize any widget in footer.

## EXTRAS

Come together with Wemusic, these plugins are recommended to install and activate for flexible use. Below are the source for documentation and support of each plugins.

### Visual Composer

Wemusic works well with Visual Composer, the popular drag and drop page builder plugin with intuitive interface to build your content at ease. If you plan to use Visual Composer Plugin for your site, check out these sources:

[Visual Composer WordPress Plugin Documentation](#) for user guide to use the plugin.

[Visual Composer WordPress Plugin Support System](#) for support upon issues of the plugin.

### Contact Form 7

Wemusic is fully compatible with Contact Form 7, the free form plugin recommended to create a nice form for your site. If you plan to use Contact Form Plugin for your site, check out these sources:

[Contact Form 7 Plugin Page](#) for basic information about the plugin.

[Contact Form 7 Plugin Documentation](#) for user guide to use the plugin.

[Contact Form 7 Plugin Support Forum](#) for support upon issues of the plugin.

## The Event Calendar

Wemusic works well with The Event Calendar, the free plugin recommended to show off your events in a calendar grid, list and day by day. If you plan to use The Event Calendar Plugin for your site, check out these sources:

[The Event Calendar Plugin Page](#) for basic information about the plugin.

[The Event Calendar Plugin Documentations](#) for user guide to use the plugin.

[The Event Calendar Plugin Support Forum](#) for support upon issues of the plugin.

## Woo Commerce

Wemusic works compatibly with Woo Commerce that allow you to create membership package or online shop. If you plan to use Woo Commerce plugin for your site, please check out these source:

[Woo Commerce Plugin Documentation](#) for user guide to use the plugin.

[Woo Commerce Plugin Community Form](#) for support upon issues of the plugin.

[Woo Commerce Knowledge Base](#) for question about plugin.

## SUPPORT

When you come to this section, we hope that you found all the information provided in this documentation helpful and you have finished installing and polishing your site as what you have imagined of. After reading carefully this guide, if you still need help, don't hesitate to contact us at

<http://support.nootheme.com>. You will be asked to create an account if you are

new to us and enter **purchase code** to post a topic for support. To get your purchase code, please login to your Themeforest account, navigate to

**"Downloads"**, click the **"Download"** button on the left of our theme, choose

**"License Certificate"** to download the license file where you can find the purchase code.

Please be noted to post a topic with your issues be clearly clarified. It is recommended you send us together with link of your site and your admin account. These will help to save time for both of us. Finally, please be patient. It will take us some time to check all the topics and we will solve topics from older to newest.

Hope you enjoy using Wemusic! Thank you for choosing our theme.
